one way I can deal with them would be for myself to lay them down as I understand them; or, which is far better, I should deal with them as they are actually put forth by some high Anglo-Indian official. As I am in a position to do so, I adopt the second course. A high official of the position of an Under Secretary of State for India and Governor of Madras, Sir Grant Duff, has already focused all the official reasons in two papers he contributed to the "Contemporary Review," and I have answered them in the same "Review" in 1887. I cannot therefore do better than to embody my reply here, omitting from it all personal remaks or others irrelevant to the present purpose. In connexion with my reply, I may explain here that it is because I have taken in it 1*l.* = Rs. 10 that the incidence of taxation is set down as 6*s.* per head per annum, while Sir H. Fowler's estimate is only 2*s.* 6*d.* per head at the present depressed exchange, and excluding land revenue. Sir H. Fowler excludes land revenue from the incidence as if land revenue, by being called "rent," rained from heaven, and was not raised as much from the production of the country as any other part of the revenue. The fact of the matter is that in British India, as in every other country, a certain portion of the production of the country is taken by the State, under a variety of names—land tax or rent, salt, revenue, excise, opium, stamps, customs, assessed taxes, post office surplus, law and justice surplus, &c., &c. In some shape or other so much is taken from the production, and which forms the source of taxation. The evil which India suffers from is not in what is raised or taken from the "production," and what India, under natural administration, would be able to give two or three times over, but it is in the manner in which that revenue is spent under the present unnatural administration and management of expenditure whereby there is an unceasing "drain" of the country.

21. My reply to Sir Grant Duff was made in 1887. This brings some of the figures to a later date than my correspondence with the Secretary of State for India. Single-handed, I have not the time to work out figures to date, but I shall add afterwards some figures which I have already worked out for later than 1887. I published in the Contemporary Review of August and November 1897 my reply to Sir Grant Duff as I have already indicated above.

22. All the subjects treated in it are the direct consequences of the present system of "the administration and management of expenditure in both "countries."

23. I give below some of the latest figures, I already have, to compare the results of the administration of expenditure in India, with those of other parts of the British Empire.

TEN YEARS (1883–92).

Countries.	Imports, including Gold and Silver.	Exports, including Gold and Silver.	Excess of Imports over Exports.	Percentage of Trade Profits.
	£	£	£	
United Kingdom - (Parl. Ret. [C. 7,143], 1893.)	4,247,954,247	3,203,603,246	1,044,351,001	32
Australasia - -	643,462,379	582,264,839	61,197,540	10·5*
North American Colonies.	254,963,473	205,063,294	49,900,179	24·4
Straits Settlements -	204,613,643	181,781,667	22,831,976	12·5
(Parl. Ret. [C. 7,144], 1893.)				

24. *Cape of Good Hope and Natal.*—I cannot give figures, as the gold brought into the colonies from Transvaal is not included in the imports; while exports include gold and silver.

* Australasia is a large gold and silver exporting country. Profits on this is a very small percentage. The profits on other produce or merchandise will be larger than 10·5 per cent., and it should also be borne in mind that Australasia, like India, is a borrowing country, and a portion of its exports, like that of India, goes for the payment of interest on foreign loans. Still, it not only pays all that interest from the profits of trade, but secures for itself also a balance of 10·5 per cent. profits, while India must not only lose all ite profits of trade but also Rx. 170,000,000 of its own produce, Were India not drained politically, she would also be in a similar condition of paying for its loans and securing something for itself out of the trade profits.

25. *Natal.*—In this also goods in transit are not included in imports, although included in exports.

26. *British India.*—Far from any excess of imports or trade profits, there is, as will be seen further on, actually a large deficit in imports (Rx. 774,099,570) from the actual exports (Rx. 944,279,318). Deficit from its own produce (Rx. 170,179,748)—18 per cent.

INDIA.

27. Particulars of the Trade of India and the losses of the Indian people of British India; or, The Drain.

TEN YEARS (1883–92). (Return [C. 7,193], 1893.)

India's Total Exports, including Treasure.

Rx. 944,279,318
Rx. 188,855,863 Add, as in other countries, say, 20 per cent. excess of imports or profits (United Kingdom is 32 per cent.)
Rx. 1,133,135,181 or the amount which the imports should be. But
Rx. 774,099,570 only are the actual imports.

Rx 359,035,611 is the loss of India for which it has not received back a single farthing either in merchandise or treasure.

28. Now, the question is, what has become of this Rx. 359,000,000 which India *ought* to have received but has not received.

29. This amount includes the payment of interest on railway and other public works loans.

30. Owing to our impoverishment, our utter helplessness, without any voice in the administration of our expenditure, our inability to make any capital, and, therefore, forced to submit to be exploited by foreign capital, every farthing of the above amount is a loss and a drain to British India. We have no choice; the whole position is compulsory upon us. It is no simple matter of business to us. It is all simply the result of the despotic administration of expenditure of our resources.

31. Still, however, let us consider these loans as a matter of business, and see what deduction we should make from the above amount.

32. The loans for public works during the 10 years (p. 298) are:—Rx. 34,350,000 (this is taken as Rs. 10 = 1*l.*, p. 130), or 34,350,000*l.* This amount is received by India, and forms a part of its imports.

33. The interest paid during the 10 years in England is 57,700,000*l.* This amount, being paid by India, forms a part of its exports. The account, then, will stand thus:—

34. India received or imported as loans 34,350,000*l.* in the 10 years. India paid or exported as interest 57,700,000*l.*, leaving an excess of exports as a business balance 23,350,000*l.* or, say, at average 1*s.* 4*d.* per rupee, Rx. 37,360,000.

35. This export made by India in settlement of public works loans interest account may be deducted from the above unaccounted amount of Rx. 359,000,000, leaving a balance of Rx. 321,640,000 still unreceived by India.

36. The next item to be considered is public debt (other than for public works). This debt is not a business debt in any possible way. It is simply the political burden put upon India by force for the very acquisition and maintenance of the British rule. It is entirely owing to the evil administration of expenditure in putting every burden on India. Make an allowance for even this forced tribute.

37. The public debt of India (excluding public works) incurred during the 10 years is 16,000,000 (p. 298), of which, say, 8,000,000*l.* has interest to be paid in London. (I do not know how much is raised in India and how much in England. I think I asked the India Office for this, but it is difficult to get definite information

from it). The interest paid in London during the 10 years is 28,600,000*l.* This forms part of the exports of India. The 8,000,000*l.* of the debt incurred during the 10 years form part of the imports of India, leaving a balance of, say, 21,000,000*l.* On public debt account to be further deducted from the last balance of unaccounted loss of Rx. 321,640,000, taking 21,000,000*l.* at 1*s.* 4*d.* per rupee, will give about Rx. 33,000,000, which, deducted from Rx. 321,640,000, will still leave the unaccounted loss or drain of Rx. 288,000,000. I repeat that as far as the economic effect on India of the despotic administration and management of expenditure under the British rule is concerned, the whole amount of Rx. 359,000,000 is a drain from the wretched resources of India.

38. But to avoid controversy, allowing for all public debt (political and commercial), there is still a clear loss or drain of Rx. 288,000,000 in 10 years, with a debt of 210,000,000*l.* hanging round her neck besides.

39. Rx. 288,000,000 is made up of Rx. 170,000,000 from the very produce of the country itself, and Rx. 118,000,000 from the profits of trade.

40. It must be also remembered that freight, insurance, and other charges after shipment are not calculated in the exports from India, every farthing of which is taken by England. When these items are added to the exports the actual loss to British India will be much larger than the above calculations. I may also explain that the item of stores is accounted for in the above calculations. The exports include payment for these stores, and imports include the stores. The whole of the above loss and burden of debt has to be borne by only the Indian taxpayers of *British India*. The Native states and their capitalists, bankers, merchants, or manufacturers, and the European capitalists, merchants, bankers, or manufacturers, get back their full profits.

41. In the above calculations I have taken 20 per cent. as what ought to be the excess of imports under natural circumstances, just as the excess of the United Kingdom is 32 per cent. But suppose I take even 15 per cent. instead of 20 per cent., then the excess of imports would be, say, Rx. 311,000,000 instead of nearly Rx. 359,000,000. From this Rx. 311,000,000, deduct, as above, Rx. 37,000,000 for public works account and Rx. 33,000,000 for political public debt account, there will still be a loss or drain Rx. 241,000,000 in 10 years.

42. Strictly considered in India's helpless condition, there has been a drain of its wealth to the extent of Rx. 360,000,000 in the 10 years.

43. But, as I have said, to avoid all futile controversy, after allowing fully for all debt, there is still a drain of Rx. 241,000,000 or Rx. 24,000,000 a year during the 10 years.

44. But it must be also remembered that besides the whole of the above drain, either Rx. 359,000,000, or Rx. 241,000,000, there is also the further loss of all that is consumed in India itself by foreigners so far, to the deprivation and exclusion of the children of British India.

45. Now let it be once more understood that there can be no objection to any capitalist, or banker, or merchant, or manufacturer going to India on his own account and making any profits there, *if we are also left free to do our best in fair competition*, but as long as we are impoverished and made utterly helpless in our economic condition by the forced and unnatural present system of the administration and management of expenditure, the whole profits of foreigners (European or Indian) is British India's irreparable loss.

46. The moral, therefore, of this phenomenon is that Sir John Shore's prediction of 1787, about the evil effect of foreign domination by the adoption of the present system of the administration and management of expenditure, is amply and deplorably fulfilled. Truly has Macaulay said: "The heaviest of all yokes "is the yoke of the stranger." It cannot be otherwise under the existing administration and management of expenditure. What an enormous sum, almost beyond calculation, would British India's loss amount to in the present century (leaving alone the last century of unparalleled corruption, plunder, and oppression by Europeans) when calculated with compound interest! A tremendously "cruel and crushing" and destructive tribute indeed!

47. With regard to the allegation that the fall in exchange has stimulated exports from India, here are a few figures which tell their own tale:

	Rx.
Exports in 1870–71 - -	64,690,000
„ „ 1890–91 -	102,340,000

or an increase of about 60 per cent. This is the increase in the 20 years of the fall of exchange.

	£
Now take 1850, exports -	18,700,000
1870, „ -	64,690,000

i.e., an increase of nearly 3½ times. Was this increase owing to fall in exchange? There was then no such fall in exchange. And what good this increase to India? As shown above, in 10 years only she has been drained to the extent indicated, besides what is eaten in the country by those who are not her children. The increase in trade, excepting that of Native and Frontier States, is not natural and economic for the benefit of the people of *British* India. It is mostly only the form in which the increasing "crushing tribute" and the trade profits and wants of foreigners are provided by the poor people of British India, the masses of whom live on scanty subsistence, and are ill-fed, ill-clothed, and ill-habited hewers of wood and drawers of water for them.

48. But there is another most important consideration still remaining.

49. Here is this wretched result as far as the producers of British and Irish produce are concerned, or the British trade with India is concerned.

50. In 1893 all British and Irish produce exported to all India is only 28,800,000*l.* for a population of 285,000,000, or 2*s.* per head per annum. But a large portion of this goes to the Native States and frontier territories. British Indian subjects themselves (221,000,000) will be found to take hardly a shilling or fifteen pence worth per head per annum. And this is all that the British people export to British India. If British India were more righteously treated and allowed to prosper, British produce will be exported to British India as much or a great deal more than what the British people are exporting to the whole world. A word to our Lancashire friends. If they would open their eyes to their true interests, and give up squabbling about these wretched cotton duties, they would see that a market of 220,000,000 people of British India, besides the 64,000,000 of the Native States, will require and take (if you allow them to prosper) more than Lancashire will be able to supply. Look at the wretched Lancashire trade with the poverty-stricken British Indians:—

In 1892–93 India imported yarn - - -	2,683,850*l.*	= 25,625,865*l.*
Manufactures - -	22,942,015*l.*	

for a population of 285,000,000, or about 1*s.* 9*d.* per head per annum. But if you deduct Native States and Frontier States, it will possibly be 1*s.* per head for British India. Why should it not be even 1*l.* or more per head if British India be allowed to enjoy its own produce? And Lancashire may have 250,000,000*l.* or more of trade instead of the wretched 25,000,000*l.* Will Lancashire ever open its eyes and help both itself and India to be prosperous?

Argument of Population.

Increase from 1881 to 1891 —

—	Increase.	Population per Square Mile.
England and Wales -	11·6 per cent.	500
British India - -	9·7 „	230

51. In 1801 the population of England and Wales (Mulhall's Dictionary, p. 444) was 8,893,000, say 9,000,000.

52. In 1884 the population was 27,000,000 (Parl. Ret [C. 7143], 1893), or three times as much as in 1801.

53. The income of England and Wales (Mul., p. 320) in 1800 was 230,000,000*l.*

54. In 1884, while the population increased to 27,000,000, or three times that of 1801, the income increased to 976,000,000*l.* (Mul., p. 321), or nearly 4½ times that of 1800.

55. The population of England and Wales (Mul., p. 444) in 1672 was 5,500,000. The income in 1664 (Mul., p. 320) was 42,000,000*l.*

56. In 1884 (Mul., p. 321), population 27,000,000, increased five times; income 976,000,000*l.*, increased more than 23 times.

57. As comparison with earlier times Macaulay said:—"While our numbers have increased tenfold, "our wealth has increased one hundredfold."

58. These facts do not show that increase of population has made England poorer. On the contrary, Macaulay truly says, "that the advantages arising "from the progress of civilisation have far more than "counterbalanced the disadvantages arising from the "progress of population."

59. Why, then, under the administration of the "greatest" and most highly paid service in the world, derived from the same stock as the administrators of this country, and, as Mr. Bright says, "whose praises "are so constantly sounded in this House," is India, after a long period, at present the most "extremely poor" country in the world. And yet, how can the result be otherwise under the existing administration and management of expenditure, based upon the deplorable principal that "India must be bled"? The fault is not of the officials. It is the evil system of expenditure, which cannot but produce such pernicious and deplorable results, which, if not remedied in time, must inevitably bring about a retribution the extent and disaster of which can hardly be conceived. Officials over and over again tell us that the resources of India are boundless. All the resources of civilisation have been at their command, and here is this wretched and ignominous result—that while England has gone on increasing in wealth at a greater progress than in population, India at this moment is far poorer than even the misgoverned and oppressed Russia, and poorer even than Turkey in its annual production, as Lord Cromer pointed out in 1882.

60. I think I need not say anything upon the first part of our reference. If I am required to be cross-examined on the representations which I have submitted, I shall then say whatever more may be necessary for me to say.

61. I have shown, by high authorities and by facts and figures, one result of the existing system of "The "administration and management of the military and "civil expenditure incurred under the authority of the "Secretary of State for India in Council, or of the "Government of India"—viz., the most deplorable evil of the extreme poverty of the mass of the people of British India—suicidal to British name and rule, and destructive and degrading to the people of British India, with an absolute system of administration instead of that of constitutional British citizenship.

. . . . .

62. Even a paper like the "Pioneer" of Allahabad (21st September 1895), which cannot be accused of being opposed to Anglo-Indian views, recognises that India "has also perhaps to undergo the often *subtle* "disadvantages of foreign rule." Yes, it is these "*subtle* disadvantages of foreign rule" which need to be grappled with and removed, if the connexion between India and England is to be a blessing to both, instead of a curse. This is the great and noble task for our Commission.

63. The administration of expenditure should be based on this principle as Sir Louis Mallet (C. 3086–1), 1881, p. 142, has said.

"If India is to be maintained and rendered a permanent portion of the British Empire, this must be accomplished in some other way than by placing our future reliance on the impirical arts of despotism."

Yours truly,

DADABHAI NAOROJI.

APPENDIX D.

Analysis of Terms of Reference as regards Apportionment of Charge.

National Liberal Club,
London, S.W.,
15th February 1896.

DEAR LORD WELBY,

1. I NOW request your favour of laying before the Commission this letter of my views on the second part of the Reference, viz., "The apportionment of charge "between the Governments of the United Kingdom "and of India for purposes in which both are "interested."

2. The word England, or Britain, is always used by me as embracing the United Kingdom.

3. I do not know whether there is any portion of the Indian charge (either in this country or in India) in which Britain is not interested. The one chief object of the whole expenditure of government is to govern India in a way to secure internal law and order and external protection. Now in both internal law and order and external protection, the interests of Britain are as great, or rather greater than those of India. That India is protected from lawlessness and disorder is unquestionably a great boon and benefit to it. But orderly or disorderly, India shall always remain and exist where it is, and will shape its own destiny somehow, well or badly. But without law and order British rule will not be able to keep its existence in India.

4. To Britain, all the law and order is the very breath of its nostrils in India. With law and order alone can it live in India.

5. If a thoroughly intelligent view of the position of Britain in India is taken, the interests of Britain are equally vital, if not far more vital, in the maintenance of good and satisfactory government, and of law and order, than those of India; and, in a just view, all the charge or cost in both countries of such good government and law and order in India, should be apportioned between the two countries, according to the importance of respective interests and to the proportion of the means or capacity of each partner in the benefit.

6. Certainly no fair and just-minded Englishman would say that Britain should have all the gain, glory, and every possible benefit of wealth, wisdom, and work of a mighty empire, and the price or cost of it should be all burdened on the shoulders of India.

7. I have stated above that the whole cost of administration is vital to the very existence of the British rule in India, and largely essential to the prosperity of the British people. Lord Roberts, with other thoughtful statesmen, has correctly stated the true relation of the two countries more than once. Addressing the London Chamber of Commerce, he said, "I rejoice to learn that you recognise how indis-"solubly the prosperity of the United Kingdom is "bound up with the retention of that vast Eastern "empire" (*Times*, 25/5/93). And again, at Glasgow, he said, "that the retention of our Eastern empire is "essential to the greatness and prosperity of the "United Kingdom" (*Times*, 29/7/93). And further, he also clearly points upon what such essential retention ultimately depends. He says, "But however "efficient and well-equipped the army of India may "be, were it indeed absolute perfection, and were its "numbers considerably more than they are at "present, our greatest strength must ever rest on the "firm base of a united and contented India." Sir William Harcourt said in his speech (House of Commons, 3/9/95), "As long as you have the people "of India your friends, satisfied with the justice "and policy of your rule, your Empire then will be "safe."

8. Professor Wordsworth has said (*Bombay Gazette*, 3/3/83): "One of the greatest Englishmen of the last "generation said that if ever we lost our Indian "empire we should lose it like every other we had lost, "or were about to lose, by alienating the affections of "the people."

9. Am I not then justified in asking that it is right and just, in order to acquire and preserve the affections of the people, that the cost of the administration which is essential to your "greatness" and your "prosperity," by which your prosperity is indissolubly bound up with that of India, and upon the secureness and law and order of which depends your very existence in India, and as a great empire, should be fairly shared by the United Kingdom?

10. Leaving this fair claim to the calm and fair consideration of this Commission, and to the sense of justice of the British people, I take a more moderate view of the duty of England. It is said that India should make all such payments as she would make for her government and her internal and external protection, even if there were no British rule, and only its own native rule. Now suppose this is admitted, what is the position? Certainly in that case there will be no employment of Europeans. The present forced, inordinate, and arbitrary employment of Europeans in both the civil and military services in both countries is avowedly, entirely, and solely, owing to British rule and *for British purposes and British interests*—to maintain British supremacy. If there were no British rule, there would be no Europeans employed by the native rulers. India accordingly may pay for every Indian employed, but justice demands that the expenditure on Europeans in both countries required for the sole interests of British rule and for British purposes should be paid by the British exchequer. I am not going to discuss here whether even British rule itself needs all the present civil and military European agency. Be this as it may, this much is clear: that the whole European agency, both civil and military, in England and in India is distinctly avowed and admitted to be for the interests of England, *i.e.*, to protect and maintain her supremacy in India against internal or external dangers. Lord Kimberley has put this matter beyond all doubt or controversy, that the European services are emphatically for the purpose of maintaining British supremacy. He says (dinner to Lord Roberts by the Lord Mayor—*Times*, 13th June, 1893):—

"There is one point upon which I imagine, whatever may be our party politics in this country, we are all united: that we are resolutely determined to maintain our supremacy over our Indian empire. That, I conceive, is a matter about which we have only one opinion, and let me tell you that that supremacy rests upon three distinct bases. One of those bases, and a very important one, is the loyalty and good-will of the Native Princes and population over whom we rule. Next, and not less important, is the maintenance of our European Civil Service, upon which rests the foundation of our administration in India. . . . . Last, not because it is the least, but because I wish to give it the greatest prominence, we rest also upon the magnificent European force which we maintain in that country, and the splendid army of native auxiliaries by which that force is supported. . . . . Let us firmly and calmly maintain our position in that country; let us be thoroughly armed as to our frontier defences, and then I believe we may trust to the old vigour of the people of this country, come what may, to support our supremacy in that great empire."

11. Now this is significant, while Lord Kimberley talks of resolute determination, &c., &c., to maintain British supremacy, and for all British purposes, he does not tell at whose cost. Is it at British cost, as it is for British purposes, or even any portion of that cost? He has not told the British pubic openly that it is for every farthing at the cost of the Indians, all the gain, glory, and empire, "ours," and all the burden for the Indians.

12. One thing is made clear by Lord Kimberley, that as far as Britain is concerned, the only motive which actuates her in the matter of the second and third basis—the European civil and military services—is her own supremacy, and nothing else; that there can be no difference of opinion in Britain why European services in both countries are forced upon India, viz., solely and entirely for British purposes and British interests, for "the resolute determination to maintain "*our* supremacy."

13. I would be, therefore, asking nothing unreasonable, under the reference to this Commission, that what is entirely for British purposes must in justice be paid for by the British people, and the Indian people should not be asked to pay anything. I, however, still the more modify this position. Notwithstanding that European services, in their present extent and constitution, are India's greatest cause of all its economic miseries, that India may consider itself under a reasonable arrangement, to be indirectly benefited by a certain extent of European agency, and that for such reasonable

arrangement India may pay some fair share of the cost of such agency, employed in India. As to all the State charges incurred in this country for such agency, it must be remembered that, in addition to their being entirely for British purposes, they are all, every farthing, earned by Europeans, and spent, every farthing, in this country. It is a charge upon India without any voice or consent of India. No such charge is made upon the Colonies. The Colonial Office building and establishment is all a charge upon the British Exchequer. All charges, therefore, incurred in this country for the India Office and its establishment, and similar ones for State purposes, should under any circumstances be paid from the British Exchequer.

14. I shall put, briefly, a moderately just "apportionment of charge" in this way:—

15. India and England should pay all salaries which are to be paid to their own people, within their own limits, respectively—*i.e.*, England should pay for all Englishmen employed in England, and India should pay for all Indians employed in India; and as to those in one country who are employed in the other country, *i.e.*,—Englishmen employed in India, and Indians employed in England—let there be some fair and reasonable apportionment between the two countries—taking, as much as possible, into consideration their respective benefits and capacity of means.

16. As to pensions, a reasonable salary being paid during service in India, no pensions to follow; so that, when Europeans retire from India, there should be no charge on England for pensions, the employees having made their own arrangements for their future from their salaries.

17. By this arrangement India will not only pay all that it would pay for a government by itself, supposing the English were not there, but also a share in the cost in India for what England regards as absolutely necessary for her own purpose of maintaining her empire in India.

18. I may say a few words with regard to the navy. On no ground whatever of justice can India be fairly charged any share for the navy, except so far as it falls within the principle stated above, of actual service in Indian harbours.

1 The whole navy as it exists, and as it is intended to be enlarged, is every inch of it required for the protection and safety of this country itself—even if Britain had no empire—for its own safety—for its very existence.

2. Every farthing spent on the navy is entirely earned by Englishmen; not the slightest share goes to India, in its gain, or glory, or employment or in any way.

3. In the time of war between England and any European Powers, or the United States, the navy will have hard work to protect British commerce itself.

4. There is no such thing, or very insignificant, as Indian foreign commerce, or Indians' risk in what is called British Indian foreign commerce. The whole of what is called British Indian foreign trade is entirely first British risk and British capital. Every inch of the shipping or every ounce of cargo on the seas is British risk of British East India banks, British marine insurance companies, and British merchants and shipowners and manufacturers. Any person who has any knowledge of how the whole of what is called British Indian foreign trade is carried on will easily understand what I mean.

5. No European Power will go to attack India from the sea, leaving British navy free to pursue it.

6. Suppose there was no English navy to pursue, Lord Roberts' united and contented, and therefore patriotic, India, will give such an irrestible Indian force at the command of Britain as to give a warm reception to the invader, and drive him back into the sea, if he ever succeeded in landing at all.

19. With regard to the absolute necessity to the United Kingdom itself for its *own safety*, of the whole navy as it exists and is intended to be increased, there is but one universal opinion, without any distinction of parties. It will be easy to quote expressions from many prominent politicians. It is, in fact, the great subject of the day for which there is perfect unanimity. I would content myself, however, with a few words of the highest authority in the realm under the Sovereign, the Prime Minister, and also of the Chancellor of the Exchequer. Lord Salisbury said in his Brighton speech:—

"But dealing with such money as you possess . . . . that the first claim is the naval defence of England. I am glad that you welcome that sentiment. . . . . It is our business to be quite sure of the safety of this island home of ours whose inaccessibility is the source of our greatness, that no improvement of foreign fleets, and no combination of foreign alliances, should be able for a moment to threaten our safety at home. . . . . We must make ourselves safe at sea whatever happens. . . . . But after all, safety—safety from a foreign foe—comes first before every other earthly blessing, and we must take care in our responsibility to the many interests that depend upon us, in our responsibility to the generations that are to succeed us, we must take care that no neglect of ours shall suffer that safety to be compromised."

20. Sir M. Hicks-Beach, the Chancellor of the Exchequer, so late as 28th January last (*The Times*, 29/1/96) said emphatically, and in a fighting mood: "We must be prepared. We must never lose the supremacy of the sea. Other nations had not got it, and could afford to do without it; but supremacy of the sea was vital to our very existence."

21. With such necessity for England's own safety, whether she had India or not, any burden to be placed on India can only be done on the principle of the right of might over our helplessness, and by treating India not in justice and fairness. Yes; let India have complete share in the *whole* Imperial system, and then talk of asking her to contribute to Imperial expenses. Then will be the time to consider any such question as it is being considered in relations with Ireland, which enjoys, short of Home Rule which is vital to it, free and full share in the whole Imperial gain and glory—in the navy, army, and Civil Services of the Empire. Let all arrangements exist in India as they exist here for entrance into all the Imperial Services here and elsewhere, and it will be time and justice to talk of India's share in Imperial responsibilities. Certainly not on the unjust principle of all gain and glory, employment, &c., for England, and share of cost on India, without any share in such gain, glory, employment, &c.

22. As to the bugbear of Russian invasion. If India is in a contented state with England, India will not only give an account of Russia, but will supply an army in the most patriotic spirit, large enough to send Russia back to St. Petersburg, India will then fight for herself in fighting for Britain. In satisfied India, Britain has an inexhaustible and irresistible store of fighting power, enough and more to fight Britain's battles all over the world, as it has been doing. Lord Beaconsfield saw this and showed it by bringing Indian troops to Malta. Only *pay honestly* for what you take, and not unjustly throw burdens upon India for your own purposes and interests. *With* India, Britain is great and invincible; without India Britain will be a small power. Make India feel satisfaction, patriotism, and prosperity under your supremacy, and you may sleep securely against the world. Of course, as I have said before, I am arguing on the assumption that justice is to be dealt out by this Commission to both countries on the basis of right.

23. Our Commision has a great, holy, and patriotic task before it. I hope it will perform it, and tell the British people, the redress that is justly due to India. The very first and immediate justice that should be done by England is the abolition of the Exchange Compensation, which is neither legal nor moral, or pay it herself, inasmuch as every farthing paid will be received by English people and in England. It is an arbitrary exaction from the poverty of India. As to the general question of apportionment, I have stated the principle above.

24. Now another important question in connection with "apportionment of charge" has to be considered, viz., of any expenses incurred outside the limits of India of 1858.

25. I shall take as an illustration the case of North-West frontier wars. Every war, large or small, that is carried on beyond the frontiers of 1858 is distinctly and clearly mainly for Britain's Imperial and European purposes. It is solely to keep her own power in India. If it were not for the maintenance of her own power in India and her position in Europe, she would not care a straw whether the Russians or any other

power invaded India or took it. The whole expenditure is for Imperial and European purposes. On 11th February, 1880, Mr. Fawcett moved the following amendment to the Address in reply to the Queen's Speech (*Hansard*, vol. 250, p. 453):—

"But humbly desire to express our regret that in view of the declarations that have been made by Your Majesty's ministers that the war in Afghanistan was undertaken for Imperial purposes, no assurance has been given that the cost incurred in consequence of the renewal of hostilities in that country will not be wholly defrayed out of the revenues of India."

26. Mr. Fawcett then said (*Hansard*, vol. 250, p. 454):—

"And, fourthly, the most important question, as far as he was able to judge, of who was to pay the expenses of the war. . . . . It seemed to be quite clear that the expenses of the war should not be borne by India, and he wished to explain that, so far as India was concerned, this was not to be regarded as a matter of generosity, but of justice and legality. . . . . The matter must be decided on grounds of strict justice and legality. . . . . (P. 457) It was a remarkable thing that every speech made in that House or out of it by ministers or their supporters on the subject, showed that the war was a great Imperial enterprise, those who opposed the war having always been taunted, as being "parochial" politicians who could not appreciate the magnitude and importance of great Imperial enterprises. . . . . (P. 458) He would refer to the speeches of the Viceroy of India, the Prime Minister, and the Secretary of State for Foreign Affairs upon the subject. . . . . In December, 1878, the noble Earl* warned the Peers that they must extend their range of vision, and told them that they were not to suppose that this was a war which simply concerned some small cantonments at Dakka and Jellalabad, but one undertaken to maintain the influence and character, not of India, but of England in Europe. Now, were they going to make India pay the entire bill for maintaining the influence and character of England in Europe? . . . . His Lordship† treated the war as indissolubly connected with the Eastern question. . . . . Therefore it seemed to him (Mr. Fawcett) that it was absolutely impossible for the Government, unless they were prepared to cast to the winds their declarations, to come down to the House and regard the war as an Indian one. . . . All he desired was a declaration of principle, and he would be perfectly satisfied if some one representing the Government would get up and say that they had always considered this war as an Imperial one, for the expenses of which England and India were jointly liable."

27. Afterwards Mr. Fawcett said (p. 477):—

"He was entirely satisfied with the assurance which had been given on the part of the Government that the House should have an opportunity of discussing the question before the Budget was introduced, and would therefore beg leave to withdraw his amendment."

28. In the House of Lords, Lord Beaconsfield emphasised the objects to be for British Imperial purposes (25/2/80—*Hansard*, vol. 250, p. 1,094):—

"That the real question at issue was whether England should possess the gates of her own great Empire in India. . . . . We resolved that the time has come when this country should acquire the complete command and possession of the gates of the Indian Empire. Let me at least believe that the Peers of England are still determined to uphold not only the Empire, but the honour of this country."

29. So it is clear that the object of all the frontier wars, large or small, was that "*England* should possess the gates of *her own* great Empire," that "*this country* "should acquire the complete command and possession "of the gates of the Indian Empire," and uphold not only the Empire, but also "the honour of this country." Can anything be more clear than the Imperial character of the frontier wars?

30. Mr. Fawcett, again, on 12/3/80, moved (*Hansard*, vol. 251, p. 922):—

"That in view of the declarations which have been officially made that the Afghan war was undertaken in the joint interests of England and India, this House is of opinion that it is unjust to defray out of the revenues of India the whole of the expenditure incurred in the renewal of hostilities with Afghanistan."

31. Speaking to this motion, Mr. Fawcett, after referring to the past declarations of the Prime Minister, the Secretary of State for Foreign Affairs, and the Chancellor of the Exchequer, quoted from the speech of the Viceroy soon after his arrival (p. 923):—

"I came to India, and just before leaving England for India I had frequent interviews with Lord Salisbury, the then Indian Secretary, and I came out specially instructed to treat the Indian frontier question as an indivisible part of a great Imperial question, mainly depending for its solution upon the general policy of Her Majesty's Government. . . . ."

32. And further on Mr. Fawcett said (p. 926):—

"What was our policy towards self-governed Colonies and towards India not self-governed? In the self-governed Colony of the Cape we had a war for which we were not responsible. Who was to pay for it? It would cost the English people something like 5,000,000*l*. In India there was a war for which the Indian people were not responsible—a war which grew out of our own policy and actions in Europe—and we are going to make the Indian people, who were not self-governed and were not represented, pay every sixpence of the cost."

33. And so Lord Salisbury, as Secretary of State for India, and the Viceroy had cleared up the whole position—"to treat the Indian frontier question as an "indivisible part of a great Imperial question, mainly "depending for its solution upon the general policy of "Her Majesty's Government," and the Indian people having no voice or choice in it.

34. Mr. Gladstone, following Mr. Fawcett, said (p. 930):—

"It appears to me that, to make such a statement as that the judgment of the Viceroy is a sufficient expression of that of the people of India, is an expression of paradox really surprising, and such as is rarely heard among us. . . . (P. 932) In my opinion my hon. friend the member for Hackney has made good his case. . . . Still, I think it fair and right to say that, in my opinion, my hon. friend the member for Hackney has completely made good his case. His case, as I understand it, has not received one shred of answer. . . . (P. 933) In the speech of the Prime Minister, the speech of Lord Salisbury, and the speech of the Viceroy of India, and, I think my hon. friend said, in a speech by the Chancellor of the Exchequer, this Afghan war has been distinctly recognised as partaking of the character of an Imperial war. . . . But I think not merely a small sum like that, but what my right hon. friend the Chancellor of the Exchequer would call a solid and substantial sum, ought to be borne by this country, at the very least. . . . . (P. 935) As regards the substance of the motion, I cordially embrace the doctrine of my hon. friend the member for Hackney. There is not a constituency in the country before which I would not be prepared to stand, if it were the poorest and most distressed in the land, if it were composed of a body of men to all of whom every addition of a farthing for taxes was a sensible burden, and before them I would be glad to stand and plead that, when we have made in India a war which our own Government have described as in part an Imperial war, we ought not for a moment to shrink from the responsibility of assuming at least a portion of the cost of that war, in correspondence with that declaration, instead of making use of the law and argument of force which is the only law and the only argument which we possess or apply to place the whole of this burden on the shoulders of the people of India."

35. The upshot of the whole was that England contributed 5,000,000*l*. out of 21,000,000*l*. spent on this war, when one would have naturally expected a "far more solid and substantial" sum from rich England, whose interest was double, both Imperial and European. But the extent of that contribution is not the present question with me. It is the principle that "the Indian "frontier question is one indivisible part of a great "Imperial question, mainly depending for its solution "upon the general policy of Her Majesty's Govern-"ment," and that, therefore, a fair apportionment must be made of all the charge or cost of all frontier wars, according to the extent of the interest and of the means of each country.

36. Coming down to later times, the action of Mr. Gladstone on 27th April, 1885, to come to the House of Commons to ask for 11,000,000*l*.—and the House accepting his proposal—on the occasion of the Penjdeh incident, is again a most significant proof of the Imperial character of these frontier wars. He said (*Hansard*, vol. 297, p. 859):—

"I have heard with great satisfaction the assurance of hon. gentlemen opposite that they are disposed to

* The Prime Minister. † The Marquis of Salisbury.

forward in every way the grant of funds to us to be used as we best think for the maintenance of what I have upon former occasions described as a National and Imperial policy. Certainly, an adequate sense of our obligations to our Indian Empire has never yet been claimed by any party in this country as its exclusive inheritance. In my opinion he will be guilty of a moral offence and gross political folly who should endeavour to claim on behalf of his own party any superiority in that respect over those to whom he is habitually opposed. It is an Imperial policy in which we are engaged."

37. Lastly, last year (15/8/95) the present leader of the House of Commons (Mr. Balfour) in his speech, referred to "a serious blow to *our* prestige"; "that "there are two and *only two* great powers they (the "tribesmen) have to consider," "*to us*, and *to us* alone, "must they look as a suzerain power." "To depend "upon the British throne." (The italics are mine.) So it is all "ours" and "us" for all gain and glory and Imperial possessions, and European position—except that India must be forced to pay the bill. Is this the sense and conscience of *English justice*, to make India pay the whole cost of the Chitral war or any frontier war?

38. Though the real and principal guiding motive for the British Government for these frontier wars is only Imperial and European for "its resolute determination" of keeping its possession of India and position in Europe, still India does not want to ignore its indirect and incidental benefit of being saved from falling into Russia's hands, coupled with the hope that when British conscience is fully informed and aroused to a true sense of the great evils of the present system of administration, these evils will be removed. India, therefore, accepts that these frontier wars, as far as they may be absolutely necessary, involve Indian interests also, and would be willing to pay a fair share according to her means.

39. India, therefore, demands and looks to the present Commission hopefully to apportion a fair division for the cost of all frontier wars in which India and England have and had purposes of common interest. This whole argument will apply to all wars, on *all* the frontiers of India—East, West, North, or South. With reference to all wars outside *all* the frontiers of India and in which India has no interest, Britain should honestly pay India fully for all the services of men or materials which she has taken and may take from India—not, as in the Abysinian War, shirk any portion. Sir Henry Fowler, in his speech in the House of Commons (22/7/93), said:—"I say on behalf of the "English people, they want to deal with Ireland, not "shabbily but generously." I believe that the English people wish to deal with India also justly and generously. Has not India greater claims than even Ireland, on the justice and generosity of the English people. Inasmuch as the Irish people have the voice of their own direct representatives in Parliament on their own and Imperial affairs, while India is helpless and entirely at the mercy of England, with no direct vote of her own, not only in Parliament, but even in the Legislative Councils in India, on any expenditure out of her own revenues. Ireland not only has such voice, but has a free and complete share in all the gain and glory of the British Empire. An Irishman can occupy any place in the United Kingdom or India. Can an Indian occupy any such position, even in his own country, let alone in the United Kingdom or the Empire. Is not this "shabby"?

40. Let us take an illustration or two. What is it, if not shabby to throw the expenses of Prince Nasarulla's visit upon the Indian people? There is the mutiny of 1857. The causes were the mistakes and mismanagement of your own authorities; the people had not only no share in it, but actually were ready at your call, to rise and support you. Punjab sent forth its best blood, and your supremacy was triumphantly maintained, and what was the reward of the people? You inflicted upon the people the whole payment to the last farthing of the cost of that deplorable event, of your own servants' making. Not only, then, was India unjustly treated, but even "shabbily." Let Lord Northbrook speak: House of Lords (15/5/93—*Debates*, vol. xii, p. 874):—

"The whole of the ordinary expenses in the Abysinian expedition were paid by India.* Only the extraordinary expenses being paid by the Home Government, the argument used being that India would have to pay her troops in the ordinary way, and she ought not to seek to make a profit out of the affair. But how did the Home Government treat the Indian Government when troops were sent out during the Mutiny? Did they say, 'we don't want to make any profit out of this?' Not a bit of it. Every single man sent out was paid for by India during the whole time, though only temporary use was made of them, including the cost of their drilling and training as recruits until they were sent out."

* With it India had nothing to do, and yet Britain did not pay all expenses.

41. Can anything be more "shabby"? not to use a stronger word. Here you send troops for your own very existence. The people help you as best they can, and you not only not pay even any portion of the expenditure, but reward the people for their loyalty with the infliction of not only the whole expense and additional burdens, but even as shabbily as Lord Northbrook discloses. And still more, since then, you have in a marked way been treating the people with distrust, and inflicting upon them, unnecessarily and selfishly, a larger and more expensive army to be paid for as wholly as the army of the Mutiny, viz., including the cost, or a portion of the cost, of their drilling and training as recruits until they are sent out, though all the troops are in this country, and they form an integral part of the British Army. And the whole expenditure of the frontier wars, including Chitral, is imposed upon the Indian people, though avowedly incurred for Imperial and European purposes, excepting that for very shame, a fourth of the cost of the last Afghan War was paid from the British Exchequer, thanks to Mr. Fawcett. In fact, the whole European Army is an integral part of the British Army, India being considered and treated as a fine training ground for the British Army, at any expense for English gain, glory, and prestige, and as a point of protection for British Imperial and European position, leaving the Indians the proud privilege of paying for everything to the last farthing, without having the slightest voice in the matter. The worst of the whole thing is that having other and helpless people's money to spend, without any check from the British taxpayer, there is no check to any unnecessary and extravagant expenditure.

42. Now, even all these unjust inflictions for the Mutiny, and all past tyranny were considered somewhat, if not fully compensated by that great, noble, and sacred with invocation of Almighty God, proclamation of 1858, by which it was proclaimed to India and to the world that the Indian subjects were raised to an equality with the British subjects in their citizenship and British rights. And is that solemn pledge kept? Not a bit of it. On the contrary all such pledges are pronounced by Lord Salisbury as "hypocrisy," by Lord Lytton as "cheating" by "deliberate and transparent subterfuges," and "by breaking to the heart "the word of promise they had uttered to the ear," by a Committee of the Council of the India Office itself as "keeping promise to the ear and breaking it to the hope," and by the Duke of Argyll as "we have not fulfilled our promises."

43. At Glasgow, on November 14th, 1895, Mr. Balfour said: "You all remember that the British Army—and "in the British Army I include those native soldiers, "fellow subjects of ours, who on that day did great "work for the Empire of which they are all citizens." This is the romance. Had Mr. Balfour spoken the reality, he would have said, "Include those native "soldiers, the drudges of ours, who on that day did "great work for the Empire, of which they are kept-"down subjects." For does not Mr. Balfour know, that far from being treated as "fellow subjects" and "citizens of the Empire," the Indians have not only to shed their blood for the Empire, but even to *pay every farthing* of the cost of those wars for "our Empire" and "our European position," that no pledges, however solemn and binding, to treat Indians as "fellow subjects" or British citizens have been faithfully kept either in letter or spirit, that however much these Indians may be brave and shed their blood for Imperial purposes, or be made to pay "cruel and crushing tribute" they are not allowed any vote in the Imperial Parliament nor a vote in the Indian Legislative Councils on their own financial expenditure, that their employment in the officering of the army beyond a few inferior positions of Subadar Major or Jamadar Major, &c., is not at all allowed, that they are distrusted and disarmed—are not allowed to become volunteers, that every possible obstacle is

thrown and "subterfuge" resorted to, against the advancement of the Indians in the higher positions of all the Civil Services, and that the simple justice of allowing Indians an equality to be simultaneously examined in their own country, for *Indian* services, decided by Act and resolution of Parliament, and solemnly pledged by the great Proclamation, is resisted by every device and subterfuge possible, unworthy of the English character. Is it not a mockery and an insult to call the Indians "fellow subjects and citizens of the Empire," when in reality they are treated as under-heel subjects?

44. Here are Rs. 128,574,590 or nearly Rs. 129,000,000, spent from April, 1882, to March, 1891 (Parliamentary Return, 91 of 1895), beyond "the West and North-west Frontiers of India," after the disastrous expenditure of 21,000,000*l.* in the last Afghan War (of which only a quarter was paid by the British Exchequer). Every pie of this nearly Rs. 129,000,000 is exacted out of the poverty-stricken Indians, and all for distinctly avowed Imperial and European British purposes. I do not know whether the Rs. 129,000,000 includes the ordinary pay of all the soldiers and officers employed in the Frontier Service, or whether it is only the extraordinary military expenditure that is included. If the ordinary pay is not included, then the amount will be larger than Rs. 129,000,000. And these are "our fellow subjects" and "our Imperial citizens"! To shed blood for Imperial purposes and to pay the whole cost also!

45. Lord George Hamilton said at Chiswick (*Times*, 22/1/96): "He hoped that the result of the present "Government's tenure of office would be to make the "British Empire not merely a figure of speech, but "a living reality"? Now is not this as much romance as that of Mr. Balfour's, instead of being a "living reality." All the questions I have asked for, Mr. Balfour's expressions apply as forcibly to the words of the present Secretary of State of India, who ought to know the real despotically subjected position of the people of British India, forming two-thirds of the empire. Yes, the British Empire can be made a "living reality" of union and devoted attachment, but not under the present system of British Indian administration of expenditure. It can be, when in that system, justice, generosity, fair apportionment of charges, and honour, and "courage of keeping the word" shall prevail.

46. Now Mr. Chamberlain, at Birmingham (*Times*, 27/1/96), said, in reference to the African Republic:—

"Now, I have never denied that there is just cause for discontent in the Transvaal Republic. The majority of the population there pay nine-tenths of the taxation, and have no share whatever in the government of the country. That is an anomaly which does not exist in any other civilised community, and it is an anomaly which wise and prudent statesmanship would remove. I believe it can be removed without danger to the independence of the Republic, and I believe until it is removed you have no permanent guarantee against future internal disturbances."

Do not these words apply with ten times force to the case of India, and is not that wise and prudent statesmanship which is preached here required to be practised in connection with the greatest part of the British Empire? I venture to use Mr. Chamberlain's words:—

"I believe (the anomaly) can be removed without danger to the stability of the British power, or, rather, with devoted and patriotic attachment to the British connection; and I believe that until it is removed you have no permanent guarantee against future internal disturbances."

47. *The Times* (1/2/96), in a leader on Lord Salisbury's speech before the Nonconformist Unionist Association, in a sentence about the Outlanders, expresses what is peculiarly applicable to the present position of India. It says:—

"The Outlanders in the Transvaal—not a minority, but a large majority—are deprived of all share of political power and of the most elementary privileges of citizenship, because the dominant class, differing from them in race and feeling, as Lord Salisbury says, 'have the government and have the rifles.'"

48. The Indians must provide every farthing for the supremacy of the minority of "the dominant class," and should not have the slightest voice in the spending of that every farthing, and find every solemn pledge given for equality of British citizenship flagrantly broken to the heart in letter and in spirit. And why? Is it because, as Mr. Gladstone said about India itself, "the law and argument of force, which is the only law "and argument which we possess or apply"? This Commission has the duty, at least, so far as a fair apportionment of charge is concerned, to redress this great wrong.

49. But the faith of the Indians in the conscience of the British people is unbounded and unshakeable, and the little incidents of bright spots keep up that faith, such as the justice of not burdening the Indian people with the cost of the Opium Commission, and—even though inadequate and partial—the payment of one-fourth of the cost of the last Afghan War. It is these acts of justice that consolidate the British rule and tend towards its stability.

50. I believe now, as I have always believed, that the English people wish and want to deal with India justly and generously. When I say that I believe in the British character of fair play and justice, it is not a sentiment of to-day or yesterday. In the very first political speech of my life, made as far back as 1853, at the formation of the Bombay Association, on the occasion of the Parliamentary Inquiry on Indian Affairs for the renewal of the Company's Charter, I said:—

"When we see that our Government is often ready to assist us in everything calculated to benefit us, we had better, than merely complain and grumble, point out in a becoming manner what our real wants are. . . . . If an Association like this be always in readiness to ascertain by strict inquiries the probably good or bad effects of any proposed measure, and, whenever necessary, to memorialise Government on behalf of the people with respect to them, our kind Government will not refuse to listen to such memorials."

51. And under that belief the Bombay Association, the British Indian Association of Bengal, and the Madras Association, memorialised the then Select Committee on Indian Affairs, for redress of grievances.

52. Now, after not very short of nearly half a century of hopes and disappointments, these are still my sentiments to-day, that with correct and full knowledge, the British people and Parliament will do what is right and just.

53. I may here take the opportunity of making a remark or two about the wide extent of the scope of the inquiry of this Commission in the first part of the Reference.

54. Lord Cranbourne, soon after having been Secretary of State for India, said (24/5/67) in reference to the powers of the Council of the Secretary of State for India:—

"It possesses by Act of Parliament an absolute and conclusive veto upon the Acts of the Government of India with reference to nine-tenths, I might also say ninety-nine hundredths, of the questions that arise with respect to that Government. Parliament has provided that the Council may veto any despatch which directs the appropriation of public money. Everyone knows that almost every question connected with Government raises in some way or other the question of expenditure."

55. The first part of the Reference to this Commission embraces "almost every question connected with "Government." "Ninety-nine hundredths of the questions that arise with respect to that Government."

56. This view is fully confirmed by the inquiry by the Select Committee of 1871–4. The Reference to it was "to inquire into the Finance and Financial "Administration of India," and our first Reference is fully of the same scope and character. Now what was the extent of the subjects of the inquiry made by that Committee? The index of the proceedings of the four years (1871–4) has a table of contents headed; "Alphabetical and Classified List of the "principal headings in the following Index, with the "pages at which they will be found." And what is the number of these headings? It is about 420. In fact, there is hardly a subject of Government which is not inquired into.

In our Reference, the inquiry into revenue is excluded.

Yours truly,
DADABHAI NAOROJI.

APPENDIX E.

REGARDING LORDS SALISBURY AND IDDESLEIGH'S SUCCESSFUL PLAN IN MYSORE.

National Liberal Club,
London, S.W.
21st March 1896.

DEAR LORD WELBY,

I HAVE to request you kindly to put before the Commission this further representation from me on the subjects of our inquiry. This will be my last letter, unless some phase of the inquiry needed any further explanation from me.

2. Looking at the first part of the inquiry from every point of view, with regard to the administration and management of expenditure, we come back again and again to the view expressed by the Duke of Devonshire and Sir William Hunter and others. The Duke of Devonshire has said: "If the country is to be better "governed, that can only be done by the employment "of the best and most intelligent of the Natives in the "Service." Sir William Hunter has said: "But the "good work thus commenced has assumed such "dimensions under the Queen's Government of India "that it can no longer be carried on or even super-"vised by imported labour from England except at a "cost which India cannot sustain. . . . If we are "to govern the Indian people efficiently and cheaply, "we must govern them by means of themselves, and "pay for the administration at the market rates of "Native labour."

3. From all I have said in my previous representations it must have been seen that the real evil and misery of the people of British India does not arise from the *amount* of expenditure. India is capable, under natural circumstances, of providing twice, three times or more the expenditure, as the improvement of the country may need in attaining all necessary progress. The evil really is in the way in which that expenditure is administered and managed, with the effect of a large portion of that expenditure not returning to the people from whom it is raised. You may devise the most perfect plan or scheme of government, not only humanly but divinely perfect—you may have the foreign officials, the very angels themselves—but it will be no earthly good to the people as long as the exhausting management of expenditure continues the same. On the contrary, the evil will increase by the very perfection or such plan or scheme for improvements and progress. For as improvements and progress are understood to mean, at present, it is more and more introducing the foreign exhausting agency.

4. The real problem before the Commission is not how to nibble at the expenditure and suggest some poor reductions here and there, to be put aside in a short time, as is always done, and how to stop the material and moral exhaustion, and leaving British India a freedom of development and progress in prosperity which her extraordinary natural resources are capable of, and to treat her justly in her financial relations with Britain by apportioning fairly the charge on purposes in which both are interested. Or, to put the problem in its double, important bearings, in the words of an eminent statesman, "which should at once "afford a guarantee for the good government of the "people, and for the security of British rights and "interests" (Lord Iddesleigh), as will be seen further on. I am glad to put before the Commission that this problem has been not merely enunciated, but that, with the courage of their convictions, two eminent statesmen have actually carried it out practically, and have done that with remarkable success. I am the more glad to bring forward this case before the Commission, as it also enables me to adduce an episode in the British Indian Administration on the conduct of the Indian authorities in both countries and other Anglo-Indian officials, which reflects great credit upon all concerned in it—and as my information goes, and as it also appears from the records, that Her Majesty personally has not a little share in this praise, and in evoking a hearty Indian gratitude and loyalty to herself. This episode also clearly indicates or points to the way as to what the true natural relations should be between Britain and India, with the result of the welfare and prosperity of both, and the security and stability of British supremacy.

5. I shall at once proceed to the case to which I have alluded above, and in connection with which there have been true statesmanlike and noble declarations made as to the right relations between Britain and India as they ought to exist. This case is in every way a bright chapter in the history of British India. The especially remarkable feature of this case is that notwithstanding the vehement and determined opposition to it from all Indian authorities for some 36 years, after this wise, natural, and righteous course was decided upon by Her Majesty and the Secretary of State for India of the time, all the authorities, both here and in India, carried it out in the most loyal, earnest, and scrupulous manner and solicitude worthy of the British name and character. Had they fortunately shown the same loyalty and true sense of their trust to the Acts and resolutions of Parliament, to the solemn proclamations and pledges, as have been shown in the case I am referring to, what a different, prosperous, and grateful India would it have been to-day, blessing the name of Britain, and both to its glory and gain. It is not too late yet.

6. On 22nd January 1867, Lord Salisbury (then Lord Cranbourne and Secretary of State for India) said (Hansard, vol. 185, p. 839):—

"But there are other considerations, and I think the hon. gentleman (Sir Henry Rawlinson) stated them very fairly and eloquently. I do not myself see our way at present to employing very largely the natives of India in the regions under our immediate control. *But it would be a great evil if the result of our dominion was that the natives of India who were capable of government should be absolutely and hopelssly excluded from such a career.* The great advantage of the existence of Native States is that they afford an outlet for statesmanlike capacity such as has been alluded to. I need not dwell upon the consideration to which the hon. gentleman so eloquently referred, but I think *that the existence of a well-governed Native State is a real benefit, not only to the stability of our rule,* but because, more than anything, it raises the self-respect of the natives and forms an ideal to which the popular feelings aspire. . . . . Whatever treaties or engagements may be entered into, I hope that I shall not be looked upon by gentlemen of the Liberal party as very revolutionary if I say *that the welfare of the people of India must override them all.* I quite admit the temptations which a paramount power has to interpret that axiom rather for its own advantage than its own honour. There is no doubt of the existence of that temptation, but that does not diminish the truth of the maxim." [The italics are mine.]

7. On 24th May 1867, Lord Iddesleigh (then Sir Stafford Northcote and Secretary of State for India) said (Hansard, vol. 187, p. 1068):—

"He believed that the change in education in India, and the fact that the Natives now saw what their system of government was and is, had told most beneficially on that country. He had, therefore, confidence that we might establish a state of things in Mysore which would have a happy effect on the administration of the country. What had taken place in other parts of India? Travancore forty years ago was in as bad a state as Mysore, yet its administration under British influence had so greatly improved that Travancore was now something like a model Native State. *Our Indian policy should be founded on a broad basis. There might be difficulties; but what we had to aim at was to establish a system of Native States which might maintain themselves in a satisfactory relation.* Keeping the virtues of Native States, and getting rid, as far as possible, of their disadvantages. We must look to the great *natural* advantages which the government of a Native State must *necessarily* have. Under the English system there were advantages which would probably never be under Native Administration—regularity, love of law and order and justice."

8. Had Lord Iddesleigh lived he would have with pleasure seen that the advantages he refers to are being attained in the Native States; and in Mysore itself, as well as in several other States, they have been largely

already attained. And under the eye of the British Government there is progress everywhere. Lord Iddesleigh proceeds :—

"But Native Administration had the advantage in *sympathy between the governors and the governed.* Governors were able to appreciate and understand the prejudices and wishes of the governed; especially in the case of Hindu States, the religious feelings of the people were enlisted in favour of their governors instead of being roused against us.* He had been told by a gentleman from India that nothing impressed them more than walking the streets of some Indian town, they looked up at the houses on each side and asked themselves, 'what do we really know of these people —of their modes of thought, their feelings, their prejudices—and at what great disadvantage, in consequence, do we administer the government?' The English Government must necessarily labour under great disadvantages,† and *we should endeavour as far as possible to develop the system of native government to bring out native talent and statesmanship, and to enlist in the cause of government all that was great and good in them.* Nothing could be more wonderful than our Empire in India; but we ought to consider on what conditions we hold it and how our predecessors held it. The greatness of the Mogul Empire depended on the liberal policy that was pursued by men like the great Emperor Akbar and his successors availing themselves of Hindu talent and assistance, and identifying themselves as far as possible with the people of the country. They ought to take a lesson from such circumstances. *If they were to do their duty towards India they could only discharge that duty by obtaining assistance and counsel of all who are great and good in that country.* It would be absurd in them to say that there was not a large fund of statesmanship and ability in the Indian character. They really must not be too proud. They were always ready to speak of the English government as so infinitely superior to anything in the way of Indian government. But if the natives of India were disposed to be equally critical, it would be possible for them to find out weak places in the harness of the English administration. The system in India was one of great complexity. It was a system of checks and counter checks, and very often great abuses failed to be controlled from want of a proper knowledge of and sympathy with the Natives." [The italics are mine.]

9. On the same day Lord Salisbury, supporting Lord Iddesleigh, said (Hansard, vol. 187, p. 1073):—

"*The general concurrence of opinion of those who know India best is that a number of well-governed small Native States are in the highest degree advantageous to the development of the political and moral condition of the people of India.* The hon. gentleman (Mr. Laing) arguing in the strong official line seems to take the view that everything is right in British territory and everything dark in native territory. Though he can cite the case of Oudh, I venture to doubt if it could be established as a general view of India as it exists at present. If Oudh is to be quoted against Native Government, the Report of the Orissa Famine, which will be presented in a few days, will be found to be another and far more terrible instance to be quoted against English rule. *The British Government has never been guilty of the violence and illegality of Native Sovereigns. But it has faults of its own, which, though they are far more guiltless in intention, are more terrible in effect.* Its tendency to routine; its listless heavy heedlessness, sometimes the result of its elaborate organisation; a fear of responsibility, an extreme centralisation—all these results traceable to causes for which no man is culpable, *produce an amount of inefficiency which, when re-inforced by natural causes and circumstances, creates a terrible amount of misery.* All these things must be taken into consideration when you compare our elaborate and artificial system of government with the more rough and ready system of India. In cases of emergency, unless you have men of peculiar character on the spot, the simple form of oriental government will produce effects more satisfactory than the more elaborate system of English rule. I am not by this denying that our mission in India is to reduce to order, to civilise and develop the Native Government we find there.‡ But I demur to that wholesale condemnation of a system of government which will be utterly intolerable on our own soil, but which has grown up amongst the people subjected to it. It has a fitness and congenialty for them impossible for us adequately to realise, but which compensate them to an enormous degree for the material evils which its rudeness in a great many cases produces. I may mention as an instance what was told me by Sir George Clerk, a distinguished member of the Council of India, respecting the province of Kathiawar, in which the English and Native Governments are very much intermixed. There are no broad lines of frontier there, and a man can easily leap over the hedge from the Native into the English jurisdiction. Sir George Clerk told me that the Natives having little to carry with them were continually in the habit of migrating from the English into the Native jurisdiction, but that he never heard of an instance of a Native leaving his own to go into the English jurisdiction. This may be very bad taste on the part of the Natives; but you have to consider what promotes their happiness, suits their tastes, and tends to their moral development in their own way. If you intend to develop their moral nature only after an Anglo-Saxon type you will make a conspicuous and disastrous defeat." [The italics are mine.]

10. In the above extract Lord Salisbury says that the inefficiency reinforced by natural causes and circumstances create a terrible amount of misery. These natural causes and circumstances which create the terrible amount of misery are pointed out by Lord Salisbury himself, as Secretary of State for India, in a Minute (29/4/75). He says, "the injury is exaggerated "in the case of India, where so much of the revenue is "exported without a direct equivalent." And that under these causes and circumstances, the result is that "India must be bled," so that he truly shows that though under the British rule there is no personal violence, the present system of the administration of expenditure cannot but create and does "*create a* "*terrible amount of misery.*"

11. Further, the crude and defective system of administration under the old system of native rule, is all changed and cannot apply to the present administration in British India. Any alteration that may be deemed necessary to be made for remedying this "terrible amount of misery" would not involve in British India any alteration at all in the existing developed plan or system of the organisation of the administration.

12. Now the moral of the above extracts from the speeches of Lords Salisbury and Iddesleigh is clear.

13. As Lord Salisbury says, "the existence of a "well-governed Native State is a real benefit, not "only to the stability of the British rule, but more "than anything it raises the self-respect of the natives "and forms an ideal to which the popular feeling "aspires." And "that a number of well-governed "small native States are in the highest degree "advantageous to the development of the political and "moral" (I may add, the material) "condition of the "people of India." Lord Iddesleigh says on the same lines, "what we had to aim at was to establish a system "of native States, which might maintain themselves "in a satisfactory relation." And what is of far more importance, he actually inaugurated the great experiment, by which he proposed to solve the great problem, "which should at once afford a guarantee for the "good government of the people and for the security "of British rights and interests," and to which I desire to draw the attention of the Commission. In short, the lesson of the extracts is that the British Indian administration as it exists at present is positively and seriously dangerous to the British supremacy, and of terrible misery to the people; while a system of Native States will raise the people, and at the same time firmly secure the stability of the British supremacy and largely conduce to the prosperity of both countries—Britain and India.

14. Now comes the great merit—which will always be remembered by Indians with deep gratitude—of these two statesmen, Salisbury and Iddesleigh. They did not rest satisfied with mere declaration of fine and great sentiments and then sleep over them, as has been done on many an occasion to the misfortune of poor India. No, they then showed that they had the courage of their convictions and had confidence in the true statesmanship of their views. In this good work Her Majesty took a warm interest and encouraged them to carry it out. The result was the memorable—and ever to be remembered with gratitude—despatch

* The same can be said about the Muhammadans and other people.
† The greatest of them is the economic evil.
‡ This is being actually done. Every effort is being made to bring the administration of the Native States to the level of the organisation of the British system—which is not a little to the credit of the British Government.

of 16th April, 1867, of Lord Iddesleigh, for the restoration of Mysore to the native rule, notwithstanding thirty-six years of determined opposition of the authorities to that step (Parl. Ret. 239, 30/4/'67).

15. And now I come to the episode to which I have referred above, and about which I write with great gratification and gratitude, of the conduct of all the authorities in both countries and of all the Anglo-Indian officials who had any share in this good work, backed as I have said already by the good-hearted and influential interest and support of Her Majesty herself. They may have made some errors of judgment, but there was universally perfect sincerity and loyalty to the trust. Among those concerned (and whose names it is a pleasure to me to give) were, as Secretaries of State for India, Lord Iddesleigh, the Duke of Argyll, Lord Salisbury, Viscount Cranbrook, and the Duke of Devonshire (from 1867 till 1881, when the late Máhárája was invested with power); as Viceroys, Lord Lawrence, Lord Mayo, Lord Northbrook, Lord Lytton, and Lord Ripon; and lastly, the Chief Commissioners and other officials of Mysore. The chief merit in the conduct of all concerned was this, Lord Iddesleigh laid down in his despatch of 16th of April 1867:—

"Without entering upon any minute examination of the terms of the Treaties of 1799, Her Majesty's Government recognise, in the policy which dictated that settlement, a desire to provide for the maintenance of an Indian dynasty on the throne of Mysore, *upon terms which should at once afford a guarantee for the good government of the people and for the security of British rights and interests.* Her Majesty is animated by the same desire, and shares the views to which I have referred. . . . . Her Majesty desires to maintain that family on the throne in the person of His Highness's adopted son. . . . . It is therefore the intention of Her Majesty that the young Prince should have the advantage of an education suitable to his rank and position, and calculated to prepare him for the duties of administration." [The italics are mine.]

16. This being once settled, though against all previous opposition, *and necessitating the withdrawal of almost all Europeans from the Services*, all the authorities and officials concerned, to their honour and praise, instead of putting any obstacles in the way, or trying to frustrate the above intentions, discharged their trust most loyally, and with every earnestness and care and solicitude to carry the work to success. The Blue-books on Mysore from the despatch of 16th April, 1867, to the installation of the late Máhárája in 1881, is a bright chapter in the history of British India, both in the justice, righteousness, and statesmanship of the decision, and the loyalty and extreme care of every detail in carrying out that decision—with success and satisfactory results in both objects set forth in the despatch, viz., "*the good government of the people and the security of British rights and interests.*"

17. I wish the India Office would make a return on Mysore relations and affairs up to date, in continuation of Ret. No. 1 of 1881 (C. 3026), to show how the good and creditable work has been continued up to the present time. I think I need not enter here into any details of this good work from 1867 to 1881 of the British officials: the Blue-books tell all that. Of the work of the late Máhárája from 1881 till his death at the end of 1894, it would be enough for me to give a very brief statement from the last Address of the Dewan, to the Representative Assembly held at Mysore on 1st October, 1895, on the results of the late Máhárája's administration during nearly 14 years of his reign, as nearly as possible in the Dewan's words. The Máhárája was invested with power on 25th March, 1881. Just previous to it, the State had encountered a most disastrous famine by which a fifth of the population had been swept away, and the State had run into a debt of 80 lakhs of rupees to the British Government. The cash balance had become reduced to a figure insufficient for the ordinary requirements of the administration. Every source of revenue was at its lowest, and the severe retrenchments which followed had left every department of State in an enfeebled condition. Such was the beginning. It began with liabilities exceeding the assets by 30¾ lakhs, and with an annual income less than the annual expenditure by 1¼ lakhs. Comparing 1880–1 with 1894–5, the revenue rose from 103 to 180½ lakhs, or 75·24 per cent., and after spending on a large and liberal scale on all works and purposes of public utility, the nett assets amounted to over 176 lakhs in 1894–5, in lieu of the nett liability of 30¾ lakhs with which His Highness's reign began in 1881.

	Rs.
18. In 1881 the balance of State funds was	24,07,438
Capital outlay on State Railways -	25,19,198
Against a liability to the British Government of - - -	80,00 000
Leaving on 30th June, 1895, a balance of *liability* of Rs. 30¾ lakhs.	
ASSETS—	
(1.) Balance of State Funds - -	1,27,23,615
(2.) Investment on account of Railway Loan Repayment Fund - -	27,81,500
(3.) Capital outlay on Mysore Harihar Railways - - -	1,43,03.306
(4.) Capital Outlay on other Railway -	41,33,390
(5.) Unexpended portion of Capital borrowed for Mysore-Harihar Railway (with British Government) - - - -	15,79,495
	3,60,21,306
LIABILITIES—	
(1.) Local Railway Loan Rs. 20,00,000	
(2.) English Railway Loan 1,63,82,801	
	1,83,82,801
Net Assets - - - -	Rs. 1,76,38,505
ADD OTHER ASSETS—	
Capital outlay on original Irrigation Works - Rs. 99,08,935	

19. Besides the above expenditure from current revenue, there is the subsidy to the British Government of about Rs. 25,00,000 a year, or a total of about Rs. 3,70,00,000 in the fifteen years from 1880–1 to 1894–5, and the Máhárája's civil list of about Rs. 1,80,00,000, during the fifteen years also paid from the current revenue. And all this together with increase in expenditure in every department. Under the circumstances above described, the administration at the start of His Highness's reign was necessarily very highly centralised. The Dewan, or the executive administrative head, had the direct control, without the intervention of departmental heads of all the principal departments, such as the Land Revenue, Forests, Excise, Mining, Police, Education, Mujroyi, Legislative. As the finances improved, and as department after department was put into good working order and showed signs of expansion, separate heads of departments were appointed, for Forests and Police in 1885, for Excise in 1889, for Mujroyi in 1891, and for Mining in 1894. His Highness was able to resolve upon the appointment of a separate Land Revenue Commissioner only in the latter part of 1894. Improvements were made in other departments —Local and Municipal Funds, Legislation, Education, &c.

20. And all the above good results are side by side with an increase of population of 18·34 per cent. in the 10 years from 1881 to 1891, and there is reason to believe that during the last four years the ratio of increase was even higher. During the fourteen years the rate of mortality is estimated to have declined 6·7 per mille.

21. But there is still the most important and satisfactory feature to come, viz., that all this financial prosperity was secured *not by resort to new taxation in any form or shape.* In the very nature of things the present system of administration and management of Indian expenditure in British India cannot ever produce such results, even though a Gladstone undertook the work. Such is the result of good administration in a native state at the very beginning. What splendid prospect is in store for the future if, as heretofore, it is allowed to develop itself to the level of the British system with its own native services, and not drained as poor British India is.

22. Lord Iddesleigh is dead (though his name will never be forgotten in India, and how he would have rejoiced!), but well may Her Majesty, Lord Salisbury, and all others concerned in it, and the British people, be proud of this brilliant result of a righteous and statesmanlike act, and may feel secure of the sincere and solid loyalty, gratitude, and attachment of the rulers and people of Mysore to the British supremacy.

23. Here, then, is the whole problem of the right and natural administration of expenditure, &c., and stability of British supremacy was solved, and that most successfully, by Lords Salisbury and Iddesleigh. It is now clear, by actual facts and operation, that the present system of expenditure, in all aspects of the

Administration of British India, is full of evil to the people and danger to British supremacy, while, on the other hand, "a number of well-governed native states" under the active control and supremacy of Britain will be full of benefit and blessing both to Britain and India and a firm foundation for British supremacy. And all this prophesy of Lords Salisbury and Iddesleigh has been triumphantly fulfilled. Lord Iddesleigh set to himself the problem "which should "at once afford a guarantee for the good government "of the people and for the security of British rights "and interests," and most successfully solved it.

24. The obvious conclusion is that the only natural and satisfactory relations between an alien supremacy and the people of India can be established on this basis alone. There are these obvious advantages in these relations:—

25. The British supremacy becomes perfectly secure and founded upon the gratitude and affection of the people, who, though under such supremacy would feel as being under their own rulers and as being guided and protected by a mighty supreme power.

26. Every State thus formed, from the very nature of its desire for *self-preservation*, will cling to the supreme power as its best security against disturbance by any other State.

The division in a number of States becomes a natural and potent power for good in favour of the stability of the British supremacy. There will be no temptation to any one state to discard that supremacy, while, on the other hand, the supreme Government, having complete control and power over the whole government of each State, will leave no chance for any to go astray. Every instinct of self-interest and self-preservation, of gratitude, of high aspirations, and of all the best parts of human nature, will naturally be on the side and in favour of British supremacy, which gave birth to these States. There will be an emulation among them to vie with each other in governing in the best way possible, under the eye and control of the supreme Government on their actions, leaving no chance for misgovernment. Each will desire to produce the best administration report every year. In short, this natural system has all the elements of consolidation of British power, of loyalty, and stability, and of prosperity of both countries. On the other hand, under the present system, all human nature and instincts are tending against you, and must inevitably end in disintegration, rebellion, and disaster. No grapes from thistles! I hope and pray that this Commission will rise to the height of its mission, and accomplish it, to the glory of this country and the prosperity of both.

27. I must not be misunderstood. When I use the words, "Native States," I do not for a moment mean that these new States are to revert to the *old* system of government of Native rule. Not at all. The system of all departments that exists at present—the whole mode of government must not only remain as it is, but must go on improving till it reaches as nearly as possible the level of the more complete mode of British government that exists in this country. The change to be made is, that these States are to be governed by Native agency, on the same lines as at present, by employing, as the Duke of Devonshire says, "the best and most intelligent of the Natives," or as Lord Iddesleigh says, "all that was great and good in them."

28. One question naturally presents itself. Are new dynastic Indian Rajahs to be created for these new States? That is a question that men like Lord Salisbury himself and the Indian authorities are best able to answer. There may be difficulties in dynastic succession. If so, the best mode of the headship under some suitable title of these States may be by appointment by Government, and aided by a representative council. This mode has certain evident advantages, viz., questions of dynastic succession may be avoided, Government will be free to secure the best man for the post, and Government will then have complete control over the States, especially with an English Resident, as in all Native States at present. If thought necessary, this control may be made still more close by having at the beginning for some time an English joint administrator instead of a Resident.

29. Sir Charles Dilke has, in one of his letters to me, said:—

"I also agree as to reduction of Europeans (so far as the non-military people go). Indeed, I agree *without* limit, and would substitute for our direct rule a military protectorate of Native States, as I have often said."

30. In another letter to me, which is published in the September number of "India," in 1893, Sir Charles dwells upon the same subject at some length, proposing to follow up the case of 'Mysore and to divide India into a number of Native States.

31. With regard to the financial relations between Britain and India, whether for military or civil charges, I have already expressed my views in my last representation. I would not, therefore, make any further remarks here.

32. Once this natural and righteous system of government by Native agency is adopted, so as to make the administration of expenditure fully productive of good results to both countries, I may with every confidence hope that the authorities, as in the case of Mysore, will loyally and scrupulously do their best to carry out the plan to success by establishing in India every necessary machinery for preparation, examinations, and tests of character, and fitness of the Indians "to (as Lord "Iddesleigh says) develop the system of Native government, to bring out Native talent and statesmanship, "and to enlist in the cause of government all that was "great and good in them."

33. The prevention and cure of the evils of the present material and moral exhaustion, arising from the existing system of the administration and management of expenditure, from unjust financial relations between the two countries, and for the redemption of the honour of this country from the violation of the most solemn and binding pledges, are absolutely necessary, if India is to be well governed, if British supremacy is to be made *thoroughly stable*, and if both countries are to be made prosperous by a market for trade of nearly 300,000,000 of civilised and prosperous people.

34. I do not here consider any other plan of Government to secure effectively the double object laid down by Lord Iddesleigh, because I think the plan proposed and carried out by Lord Salisbury and him, is the most natural and the best, and most secure for the continuance of British supremacy.

35. I also do not enter into any details, as all possible difficulties of details, and the means by which they were overcome, are all recorded in the Mysore Blue-books.

36. I submit to the Commission that unless the patriotism and prosperity of the people of India are drawn to the side of British supremacy, no plan or mode of government, under the existing system of expenditure, will be of any good either to British supremacy or to the Indian people. Evil and peril to both is the only dismal outlook. On the other hand, a number of Native States, according to the noble views and successful work of Lords Salisbury and Iddesleigh, will contribute vastly both to the gain and glory of the British people, to vast expansion of trade, and to the prosperity and affection of the Indian hundreds of millions of the human race.

37. If India is thus strengthened in prosperity, and patriotically satisfied in British supremacy, I cannot feel the least fear of Russia ever dreaming of invading India. Without any military help from England, and without any large European army, India will be all sufficient in itself to repel any invasion, and to maintain British supremacy for her own and Britain's sake.

38. I hope earnestly that this Commission will, as Sir Louis Mallet has urged, grapple with the disease of the evil results of the present system of expenditure, instead of, like other past Commissions and Committees, keeping to the habit of merely palliating symptoms. I do not much intervene in examining details of departmental expenditure, such examination at proper intervals, as used to be the case in the time of the Company, serves the important purpose of keeping the Government up to mark, in care of expenditure. But unless the whole Government is put on a natural basis, all examinations of details of departmental expenditures, will be only so much "palliating with symptoms," and will bring no permanent good and strength either to the Indian people or to the British supremacy.

39. I offer to be cross-examined on all my representations.

40. As before. I shall send a copy of this to every member of the Commission.

Yours truly,
DADABHAI NAOROJI.

EXTRACT from LETTER of 31st January 1897, which is omitted.

DEAR LORD WELBY,

41. I request you kindly to put before the Commission this, my sixth, representation on the subjects of our inquiry.

42. Nobody can more appreciate the benefits of the British connection than I do. Education in particular, appreciation of and desire for British political institutions, law and order, freedom of speech and public meeting, and several important social reforms. All these are the glory of England and gratitude of India. I am most sincerely ready to accord my gratitude for any benefit which Britain can rightly claim.

43. But, while looking at one side, justice demands that we look at the other side also. And the main object of this Commission is to see the other side of the system of the administration and management of expenditure and right apportionment.

44. It must be remembered that while education and law and order have been beneficial to the Indians of British India they were also most essential to the very existence of the British in India. Only that while these benefits have been to both Britain and British India, the cost has been *all* exacted from the Indians.

45. The British Empire in India is built up entirely with the money of India, and, in great measure, by the blood of India. Besides this, hundreds of millions, or, more probably, several thousands of millions (besides what is consumed in India itself by Europeans and their careers of life) of money, which Britain has unceasingly, and ever increasingly, drawn from British Indians, and is still drawing, has materially helped to make Britain the greatest, the richest, and most glorious country in the world—benefitting her material condition so much, that even when there is a general and loud cry of depression in agriculture, &c., the Chancellor of the Exchequer is rejoicing that his income tax is marvellously increasing because of the continuous flow of wealth from India; while British India in its turn is reduced to "extreme poverty."

* * *

46. It must be borne in mind that all the loans made to India form a part of the imports, and are already paid for and included in that portion of the exports which is equal to the total imports, the "net exports" being, *after* allowing for *all* imports, including loans. Otherwise, if these loans were deducted from the imports, the "net exports" will be so much larger. The foreign capitalists not only make profits with their own capital, but they draw even their capital from the taxation of the poor people themselves. The following words of Sir James Westland in the telegram of the *Times* of 18th December last will explain what I mean:—

"Sir J. Westland then explained how closely connected the Money Market of India was with the Government balances almost as the available capital employed in commerce practically being in those balances. . . . A crore and a half, which under normal conditions would have been at headquarters in Calcutta and Bombay, and been placed at the disposal of the mercantile community for training purposes."

* * * * *

47. Before I proceed further, let me clear up a strange confusion of ideas about prosperous British India and poverty-stricken British India. This confusion of ideas arises from this circumstance. My remarks are for British India only.

48. In reality there are two Indias—one the prosperous, the other poverty-stricken.

49.—(1) The prosperous India is the India of the British and other foreigners. They benefit in India as officials, non-officials, capitalists, in a variety of ways, and carry away enormous wealth to their own country. To them India is, of course, rich and prosperous. The more they can carry away, the richer and more prosperous India is to them. These British and other foreigners cannot understand and realise why India can be called "extremely poor," when they can make their life careers; they can draw so much wealth from it and enrich their own country. It seldom occurs to them, if at all, what all that means to the Indians themselves.

50.—(2) The second India is the India of the Indians—the poverty-stricken India. This India, exhausted in every way of their wealth, of their services, of their land, labour, and all resources by the foreigners, helpless and voiceless, governed by the arbitrary law and argument of force, this India of the Indians becomes the "poorest" country in the world, after one hundred and fifty years of British rule. The greater the drain, the greater the impoverishment, resulting in all the scourges of war, famine and pestilence. If this distinction of the "prosperous India" and the "poverty-stricken India" be carefully borne in mind, a great deal of the controversy on this point will be saved. Britain can, by a righteous system, make both Indias prosperous. The great pity is that the Indian authorities do not or would not see it.

APPENDIX F.

Employment of Indians in the Higher Grades.

Washington House,
72, Anerley Park, S.E.

Dear Lord Welby, November 3rd, 1897.

1. I now give my statement on the Admission of Natives to the Covenanted Civil Service in India, as promised by me at the meeting of the Commission on 21st July last, and request you to place it before the Commission. I shall send a copy to the members.

2. If required, I shall give any further statement I can on any particular point that may require to be more elucidated. I shall be willing to be cross-examined if required.

3. The first deliberate and practical action was taken by Parliament in the year 1833.

4. All aspects of the whole question of all services were then fully discussed by eminent men; and a Committee of the House made searching inquiry into the whole subject.

5. I give below extracts from what was said on that occasion, and a definite conclusion was adopted.

6. I am obliged to give some of the extracts at length, because it must be clearly seen on what statesmanlike and far-seeing grounds this conclusion was arrived at.

7. The italics all through are mine, except when I say that they are in the original.

East India Company's Charter,
Hansard, Vol. XIX., Third Series, p. 169.
July 5th, 1833.

8. The Marquis of Lansdowne: "But he should be taking a very narrow view of this question, and one utterly inadequate to the great importance of the subject, which involved in it the happiness or misery of 100,000,000 of human beings, were he not to call the attention of their lordships *to the bearing which this question and to the influence which this arrangement must exercise upon the future destinies of that vast mass of people.* He was sure that their lordships would feel, as he indeed felt, that their only justification before God and Providence for the great and unprecedented dominion which they exercised in India was in the happiness which they communicated to the subjects under their rule, and in proving to the world at large and to the inhabitants of Hindustan that the inheritance of Akbar (the wisest and most beneficent of Mahomedan princes) had not fallen into unworthy or degenerate hands. Hence it was important that when the dominion of India was transferred from the East India Company to the King's Government they should have the benefit of the experience of the most enlightened councillors, not only on the financial condition of our empire in the East but also on the character of its inhabitants. He stated confidently, after referring to the evidence given by persons eminently calculated to estimate what the character of the people of India was, that they must, as a first step to their improved social condition, be admitted to a larger share in the administration of their local affairs. On that point their lordships had the testimony of a series of successful experiments and the evidence of the most unexceptionable witnesses who had gone at a mature period of their life and with much natural and acquired knowledge to visit the East. Among the crowd of witnesses which he could call to the improvable condition of the Hindu character he would select only two; but those two were well calculated to form a correct judgment, and fortunately contemplated Indian society from very different points of view. Those two witnesses were Sir Thomas Monro and Bishop Heber. He could not conceive any two persons more eminently calculated to form an accurate opinion upon human character, and particularly upon that of the Hindu tribes. They were both highly distinguished for talent and integrity, yet they were placed in situations from which they might have easily come to the formation of different opinions—one of them being conversant with the affairs of the East from his childhood and familiarised by long habit with the working of the system, and the other being a refined Christian philosopher and scholar going out to the East late in life, and applying in India the knowledge which he had acquired here to form an estimate of the character of its inhabitants. He held in his hand the testimony of each of those able men, as extracted from their different published works, and with the permission of the House he would read a few words from both. Sir T. Monro, in speaking of the Hindu character, said: 'Unless we suppose that they are inferior to us in natural 'talent, which there is no reason to believe, it is much 'more likely that they will be duly qualified for their 'employments than Europeans for theirs—because the 'field of selection is so much greater in the one than 'in the other. We have a whole nation from which to 'make our choice of natives, but in order to make 'choice of Europeans we have only the small body of 'the Company's covenanted servants. No conceit more 'wild and absurd than this was ever engendered in the 'darkest ages; for what is in every age and in every 'country the great stimulus to the pursuit of know-'ledge but the prospect of fame or wealth or power? 'Or what is even the use of great attainments if they 'are not to be devoted to their noblest purpose, the 'service of the community, by employing those who 'possess them according to their respective qualifica-'tions in the various duties of the public administration 'of the country? Our books alone will do little or 'nothing; dry simple literature will never improve the 'character of a nation. To produce this effect it must 'open the road to wealth and honour and public em-'ployment. Without the prospect of such reward no 'attainments in science will ever raise the character 'of a people.' That was the sound practical opinion of Sir T. Monro, founded on his experience acquired in every part of India, in every department of the public service. Bishop Heber, during his extensive journey of charity and religion through India, to which he fell at length a martyr, used these remarkable expressions: 'Of the natural disposition of the Hindu I still see 'abundant reason to think highly, and Mr. Bayley and 'Mr. Melville both agreed with me that they are 'constitutionally kind-hearted, industrious, sober, and 'peaceable; at the same time that they show them-'selves on proper occasions a manly and courageous 'people.' And again: 'They are decidedly by nature 'a mild, pleasing, and intelligent race, sober, parsi-'monious, and, where an object is held out to them, 'most industrious and persevering.' Their lordships' were therefore justified in coming to the same conclu-sion—a conclusion to which, indeed, they must come if they only considered the acts of this people in past ages—if they only looked at the monuments of grati-tude and piety which they had erected to their bene-factors and friends—for to India, if to any country, the observation of the poet applied:

'Sunt hic etiam sua præmia laudi,
Sunt lacrymæ rerum, et mentem mortalia tangunt.'

But, however much civilisation had been obscured in those regions, whatever inroads foreign conquest and domestic superstition had made upon their moral habits, it was undeniable that they had still materials left for improving and ameliorating their condition; and their lordships would be remiss in the performance of the high duties which devolved upon them if they did not secure to the numerous natives of Hindustan the ample development of all their mental endowments and moral qualifications. *It was a part of the new system which he had to propose to their lordships that to every office in India every native, of whatsoever caste, sect, or religion, should by law be equally admissible, and he hoped that Government would seriously endeavour to give the fullest effect to this arrangement, which would be as beneficial to the people themselves as it would be advantageous to the economical reforms which were now in progress in differ-ent parts of India.*"

. . . . .

9. (*Page* 174, *July* 5*th*, 1833.)—"And without being at all too sanguine as to the result of the following up those principles without calculating upon any extension of territory through them, he was confident *that the strength of the Government would be increased by the ha piness of the people over whom it presided, and by the p lment of those nations to it.*"

Vol. XIX., Third Series, p. 533.
July 10th, 1833.

10. Mr. MACAULAY: "I have detained the House so long, Sir, that I will defer what I had to say in some parts of this measure—important parts, indeed, but far less important as I think than those to which I have adverted, till we are in Committee. There is, however, one part of the Bill on which, after what has recently passed elsewhere, I feel myself irresistibly impelled to say a few words. *I allude to that wise, that benevolent, that noble clause, which enacts that no Native of our Indian Empire shall, by reason of his colour, his descent, or his religion, be incapable of holding office.* At the risk of being called by that nickname which is regarded as the most opprobrious of all nicknames by men of selfish hearts and contracted minds—at the risk of being called a philosopher—*I must say that, to the last day of my life, I shall be proud of having been one of those who assisted in the framing of the Bill which contains that clause.* We are told that the time can never come when the natives of India can be admitted to high civil and military office. We are told that this is the condition on which we hold our power. We are told that we are bound to confer on our subjects—every benefit which they are capable of enjoying?—no—which it is in our power to confer on them?—no—but which we can confer on them without hazard to our own domination. *Against that proposition I solemnly protest as inconsistent alike with sound policy and sound morality.*

11. "I am far, very far, from wishing to proceed hastily in this most delicate matter. I feel that, for the good of India itself, the admission of Natives to high office must be effected by slow degrees. But that, when the fulness of time is come, when the interest of India requires the change, we ought to refuse to make that change lest we should endanger our own power;—this is a doctrine which I cannot think of without indignation. Governments, like men, may buy existence too dear. '*Propter vitam vivendi perdere causas,*' *is a despicable policy either in individuals or in states. In the present case, such a policy would be not only despicable, but absurd.* The mere extent of empire is not necessarily an advantage. To many Governments it has been cumbersome; to some it has been fatal. It will be allowed by every statesman of our time, that the prosperity of a community is made up of the prosperity of those who compose the community, and that it *is the most childish ambition to covet dominion which adds to no man's comfort or security.* To the great trading nation, to the great manufacturing nation, no progress which any portion of the human race can make in knowledge, in taste for the conveniences of life, or in the wealth by which those conveniences are produced, can be matter of indifference. It is scarcely possible to calculate the benefits which we might derive from the diffusion of European civilisation among the vast population of the East. *It would be, on the most selfish view of the case, far better for us that the people of India were well governed and independent of us, than ill-governed and subject to us*—that they were ruled by their own kings, but wearing our broad cloth, and working with our cutlery, than that they were performing their salaams to English collectors and English magistrates, but were too ignorant to value, or too poor to buy English manufactures. To trade with civilised men is infinitely more profitable than to govern savages. *That would indeed be a doting wisdom, which, in order that India might remain a dependency, would keep it an useless and costly dependency—which would keep a hundred millions of men from being our customers in order that they might continue to be our slaves.*

12. "It was, as Bernier tells us, the practice of the miserable tyrants, whom he found in India, when they dreaded the capacity and spirit of some distinguished subject, and yet could not venture to murder him, to administer to him a daily dose of the pousta, a preparation of opium, the effect of which was in a few months to destroy all the bodily and mental powers of the wretch who was drugged with it, and to turn him into an helpless idiot. *That detestable artifice, more horrible than assassination itself,* was worthy of those who employed it. *It is no model for the English nation. We shall never consent to administer the pousta to a whole community—to stupefy and paralyse a great people, whom God has committed to our charge, for the wretched purpose of rendering them more amenable to our control.* What is that power worth which is founded on vice, on ignorance, and on misery—which we can hold only by violating the most sacred duties which as governors we owe to the governed—which as a people blessed with far more than an ordinary measure of political liberty and of intellectual light—we owe to a race debased by three thousand years of despotism and priestcraft? *We are free, we are civilised, to little purpose, if we grudge to any portion of the human race an equal measure of freedom and civilisation.*

13. "Are we to keep the people of India ignorant in order that we may keep them submissive? Or do we think that we can give them knowledge without awakening ambition? Or do we mean to awaken ambition and to provide it with no legitimate vent? Who will answer any of these questions in the affirmative? Yet one of them must be answered in the affirmative, by every person who maintains that we ought permanently to exclude the natives from high office. *I have no fears. The path of duty is plain before us: and it is also the path of wisdom, of national prosperity, of national honour.*

14. "The destinies of our Indian empire are covered with thick darkness. It is difficult to form any conjecture as to the fate reserved for a state which resembles no other in history, and which forms by itself a separate class of political phenomena. The laws which regulate its growth and its decay are still unknown to us. It may be that the public mind of India may expand under our system till it has outgrown that system; that by good government we may educate our subjects into a capacity for better government, that, having become instructed in European knowledge, they may, in some future age, demand European institutions. Whether such a day will ever come, I know not. *But never will I attempt to avert or to retard it. Whenever it comes, it will be the proudest day in English history.* To have found a great people sunk in the lowest depths of slavery and superstition, to have so ruled them as to have made them desirous and capable of all the privileges of citizens would indeed be a title *to glory all our own.* The sceptre may pass away from us. Unforeseen accidents may derange our most profound schemes of policy. Victory may be inconstant to our arms. *But there are triumphs which are followed by no reverses. There is an empire exempt from all natural causes of decay. Those triumphs are the pacific triumphs of reason over barbarism; that empire is the imperishable empire of our arts and our morals, our literature, and our law.*"

15. After such exhaustive consideration from all political, Imperial, and social aspects, the following—"that wise, that benevolent, that noble clause"—was deliberately enacte dby the Parliament of this country, worthy of the righteousness, justice, and noble instincts of the British people, in the true British spirit.

3 and 4 William IV, cap. 85. 1833.

16. "That no native of the said territories, nor any natural-born subject of his Majesty resident therein shall, by reason only of his religion, place of birth, descent, colour, or any of them, be disabled from holding any place, office or employment under the said Company."

Ret. C—2376, 1879, p. 13.

17. "The Court of Directors interpreted this Act in an explaining despatch in the following words:—'The Court conceive this section to mean that *there shall be no governing caste in British India;* that whatever other tests of qualification may be adopted, distinction of race or religion shall not be of the number; that no subject of the King, whether of Indian or British or mixed descent, shall be excluded from the post usually conferred on uncovenanted servants in India, *or from the Covenanted Service itself,* provided he be otherwise eligible.'"

18. After this explanation by the Court of Directors, how did they behave?

During the twenty years of their Charter, to the year 1853, they made the Act and their own explanation a complete dead letter. They did not at all take any steps to give the slightest opportunity to Indians for a single appointment to the Covenanted Civil Service, to which my statement chiefly refers; though the British people and Parliament are no party to this unfaithfulness, and never meant that the Act should remain a sham aud delusion.

19. Twenty years passed, and the revision of the Company's Charter again came before Parliament in 1853; and if anything was more insisted on and bewailed than another, it was the neglect of the authorities to give effect to the Act of 1833. The principles of 1833 were more emphatically insisted on. I would just give a few extracts from the speeches of some of the most eminent statesmen, in the debate on the Charter.

Hansard, Vol. 127, p. 1,184.
June 3rd, 1853.

20. Mr. BRIGHT: "Another subject requiring close attention on the part of Parliament was the employment of the natives of India in the service of the Government. The right hon. member for Edinburgh (Mr. Macaulay), in proposing the India Bill of 1833 had dwelt on one of its clauses, which provided that neither colour nor caste nor religion nor place of birth should be a bar to the employment of persons by the Government; whereas, as matter of fact, from that time to this no person in India had been so employed who might not have been equally employed before that clause was enacted; and from the statement of the right hon. gentleman the President of the Board of Control, that it was proposed to keep up the Covenanted Service system, it was clear that this most objectionable and most offensive state of things was to continue. Mr. Cameron, a gentleman thoroughly versed in the subject, as fourth Member of Council in India, President of the Indian Law Commission, and of the Council of Education for Bengal—what did he say on this point? He said: 'The statute of 1833 made the 'natives of India *eligible to all offices* under the Com- 'pany. But during the twenty years that have since 'elapsed not one of the natives has been appointed 'to any offices except such as they were eligible to 'before the statute.'"

Hansard, Vol. 128, p. 759. 1853.

21. MACAULAY said: "In my opinion we shall not secure or prolong our dominion in India by attempting to exclude the natives of that country from a share in its government."—(*Contemporary Review*, June, 1883, p. 803).

Hansard, Vol. 129, p. 684.
July 22nd, 1853.

22. Lord STANLEY: "He could not refrain from expressing his conviction that, in refusing to carry on examinations in India as well as in England—a thing that was easily practicable—the Government were, in fact, negativing that which they declared to be one of the principal objects of their Bill, and confining the Civil Service, as heretofore, to English men. *That result was unjust, and he believed it would be most pernicious.*"

Hansard, Vol. 129, p. 784.
July 25th, 1853.

23. Lord STANLEY: "Let them suppose, for instance, that instead of holding those examinations here in London, that they were to be held in Calcutta. Well, how many Englishmen would go out there—or how many would send out their sons, perhaps to spend two or three years in the country on the chance of obtaining an appointment! *Nevertheless, that was exactly the course proposed to be adopted towards the natives of India.*"

Hansard, Vol. 129, p. 778.
July 25th, 1853.

24. Mr. BRIGHT said: "That the motion now before the Committee involved the question which had been raised before during these discussions, but which had never been fairly met by the President of the Board of Control, namely, whether the clause in the Act of 1833, which had been so often alluded to, had not up to this time been altogether a nullity. If any doubt had been entertained with respect to the object of that clause, it would be removed by reference to the answers given by the then President of the Board of Control to the hon. member for Montrose and to the speech of the right hon. gentleman the present member for Edinburgh (Mr. Macaulay), in both of which it was distinctly declared that the object was to break down the barriers which were supposed to exist to the admission of the natives as well as Europeans to high offices in India. And yet there was the best authority for saying that nothing whatever had been done in consequence of that clause. He (Mr. Bright) did not know of a single case where a Native of India had been admitted to any office since that time, more distinguished or more highly paid than he would have been competent to fill had that clause been not passed."

Hansard, Vol. 129, p. 1,335.
August 5th, 1853.

25. Earl GRANVILLE: "I, for one, speaking individually, have never felt the slightest alarm at natives, well-qualified and fitted for public employments, *being employed in any branch of the public service of India.*"

26. Thus began the second chapter of this melancholy history with the continuation of the same spirit of selfishness which had characterised the previous twenty years, with the clear knowledge of the gross injustice to the Indians by not allowing them the same facility as was allowed to English youths, by simultaneous examinations in India and England. This injustice continued till the second chapter ended in the Mutiny of 1857, and the rule passed from the Company to the Crown.

27. The third chapter from that time began again with the revival of great hopes—that, however unfortunate and deplorable the Mutiny was, one great good sprang from that evil. The conscience of the British people was awakened to all previous injustice by their servants, and to a sense of their own duty. A new era opened, brighter, far brighter, than even that of the Act of 1833.

28. Not only was the Act of 1833 allowed to continue a living reality, at least in word, but in directing the mode of future services the Act of 1858 left it comprehensively open to adopt any plan demanded by justice. It did not indicate in the slightest degree prevention or exclusion of Indians from *any* service or from simultaneous examinations in India and England, or of any mode of admission of Indians into the Covenanted Civil Service, or of doing equal justice to all her Majesty's natural-born subjects. I shall show further on the interpretation by the Civil Service Commissioners themselves.

29. The sections of the Act of 1858 are as follows:—

1.—21-22 Vic., Cap. 106, "An Act for the better Government of India (2nd August, 1858). Section 32 provides that:

"With all convenient speed after the passing of this Act, regulations shall be made by the Secretary of State in Council, with the advice and assistance of the Commissioners for the time being acting in execution of Her Majesty's Order in Council of Twenty-first *May*, One thousand, eight hundred, and fifty-five, 'for regu- 'lating the admission of persons to the Civil Service 'of the Crown,' for admitting all persons being natural-born subjects of her Majesty (and of such age and qualification as may be prescribed in this behalf) who may be desirous of becoming candidates for appointment to the Civil Services of *India* to be examined as candidates accordingly, and for prescribing the branches of knowledge in which such candidates shall be examined, and generally for regulating and conducting such examinations under the superintendence of the said last-mentioned Commissioners, or of the persons for the time being intrusted with the carrying out of such regulations as may be from time to time established by her Majesty for examination, certificate, or other test of fitness in relation to appointments to junior situations in the Civil Services of the Crown, and the candidates who may be certified by the said Commissioners or other persons as aforesaid to be entitled under such regulations shall be recommended for appointment according to the order of their proficiency as shown by such examinations, and such persons only as shall have been so certified as aforesaid shall be appointed or admitted to the Civil Services of *India* by the Secretary of State in Council: Provided always, that all regulations to be made by the said Secretary of State in Council under this Act shall be laid before Parliament within fourteen days after the making thereof, if Parliament be sitting, and, if Parliament be not sitting, then within fourteen days after the next meeting thereof."

30.—2. The same Act, Cap. 106, Sect. 34, provides:—

"With all convenient speed after the commencement of this Act, regulations shall be made for admitting any persons *being natural-born subjects of Her Majesty* (and of such age and qualifications as may be prescribed in this behalf) who may be desirous of becoming candidates for cadetships in the Engineers and in the Artillery, to be examined as candidates accordingly, and for prescribing the branches of knowledge in which such candidates shall be examined, and generally for regulating and conducting such examinations."

31. Though this Section does not impose any disability on an Indian—for it provides for "any persons being "natural-born subjects of Her Majesty"—yet an Indian is totally excluded from such examination. As I have already placed before the Commission my correspondence with the War Office, I need not say more.

32.—3. Sections 35 and 36 provide:—

"Not less than one-tenth of the whole number of persons to be recommended in any year for military cadetships (other than cadetships in the Engineers and

Artillery) shall be selected according to such regulations as the Secretary of State in Council may from time to time make in this behalf from among the sons of persons who have served in India in the military or civil services of Her Majesty, or of the East India Company."

33. "Except as aforesaid, all persons to be recommended for military cadetships shall be nominated by the Secretary of State and Members of Council, so that out of seventeen nominations the Secretary of State shall have two and each Member of Council shall have one; but no person so nominated shall be recommended unless the nomination be approved of by the Secretary of State in Council."

34. In these sections also there is no exclusion of Indians.

35. But the Sovereign and the people did not rest even by such comprehensive enactment by Parliament. They explicitly emphasised and removed any possible doubt with regard to the free and equal treatment of all her Majesty's natural-born subjects without any distinction of race, colour, or creed.

36. Thus, on the 1st November, 1858, followed the great and glorious Proclamation by the Sovereign on behalf of the British people: our complete "great charter" of our national and political rights of British citizenship and of perfect equality in all the services of the Sovereign—a proclamation the like of which had never been proclaimed in the history of the world under similar circumstances.

Here are the special clauses of that Proclamation:

37. "We hold ourselves bound to the natives of our Indian territories by the *same obligations of duty which bind us to all our other subjects*, and those obligations, by the blessing of Almighty God, we shall *faithfully and conscientiously* fulfil."

38. "And it is our further will that, so far as may be, our subjects, of whatever race or creed, be freely and impartially admitted to offices in our service the duties of which they may be qualified, by their education, ability, and integrity, duly to discharge."

39. "When by the blessing of Providence, internal tranquillity shall be restored, it is our earnest desire * * * to administer government for the benefit of all our subjects resident therein. *In their prosperity will be our strength, in their contentment our security*, and *in their gratitude our best reward. And may the God of all Power grant to us, and to those in authority under us, strength to carry out these our wishes for the good of our people.*"

40. Such was the noblest Proclamation of 1858. What more could we ask, and what bonds of gratitude and affection, and what vast benefits to both countries, were expected to tie us to the connection with Britain by a loyal and honourable fulfilment of it?

41. Yes, I was in Bombay when this glad—I may almost say divine—message to India was proclaimed there to a surging crowd. What rejoicings, what fireworks, illuminations, and the roar of cannon! What joy ran through the length and breadth of India, of a second and firm emancipation, of a new British political life, forgetting and forgiving all the past evil and hoping for a better future! What were the feelings of the people! How deep loyalty and faith in Great Britain was rekindled! It was said over and over again: Let this Proclamation be faithfully and conscientiously fulfilled, and England may rest secure and in strength upon the gratitude and contentment of the people—as the Proclamation had closed its last words of prayer.

42 Now, when I look back to-day to that day of joy, how I feel how all this was doomed to disappointment. However, I must proceed with the sad tale.

43. Not long after Her Majesty's Proclamation of 1858, a Committee was appointed by the Secretary of State for India of the following members of his own Council: Sir J. P. Willoughby, Mr. Mangles, Mr. Arbuthnot, Mr. Macnaghten, and Sir Erskine Perry—all Anglo-Indians. This Committee made its report on 20th January, 1860, from which I give the following extracts on the subject of the pledge of the Act of 1833:—

44. "2. We are in the first place *unanimously* of opinion that it is not only just, but expedient, that the nativesof India shall be employed in the administration of India to as large an extent as possible consistently with the maintenance of British supremacy, and have considered whether any increased facilities can be given in this direction.

45. "3. It is true that, even at present, no positive disqualification exists. By Act 3 and 4 Wm. IV, cap. 85, sec. 87, it is enacted, 'that no native of the said 'territories nor any natural-born subject of his Majesty 'resident therein shall, by reason only of his religion, 'place of birth, descent, colour, or any of them, be 'disabled from holding any place, office or employment 'under the said Company.' It is obvious, therefore, that when the competitive system was adopted, it could not have been intended to exclude natives of India from the Civil Service of India.

46. "4. Practically, however, they are excluded. The law declares them eligible, but the difficulties opposed to a native leaving India and residing in England for a time, are so great, that, as a general rule, it is almost impossible for a native successfully to compete at the periodical examinations held in England. *Were this inequality removed we should no longer be exposed to the charge of keeping promise to the ear, and breaking it to the hope.*

47. "5. Two modes have been suggested by which the object in view might be attained. The first is, by alloting a certain portion of the total number of appointments declared in each year to be competed for in India by natives, and by all other natural-born subjects of her Majesty resident in India. The second is, to hold simultaneously two examinations, one in England, and one in India, both being, as far as practicable, identical in their nature, and those who compete in both countries being finally classified in one list according to merit, by the Civil Service Commissioners. The Committee have *no hesitation in giving the preference to the second scheme*, as being the *fairest*, and the most in accordance with the principles of a general competition for a common object.

48. "6. In order to aid them in carrying out a scheme of this nature, the Committee have consulted the Civil Service Commission, and, through the favour of Sir Edward Ryan, they have obtained a very able paper, in which the advantages and disadvantages of either plan are fully and lucidly discussed. They would solicit your careful consideration of this document, and will only, in conclusion, add that, in the event of either of the plans being adopted, it will be requisite to provide for the second examination of successful competitors in India, as nearly as possible resembling that now required in England. The Civil Service Commissioners do not anticipate much difficulty in arranging for this. The Committee, however, are decidedly of opinion that the examination papers on which the competition is to proceed in India and England should be identical; but they think, in justice to the natives, that three colloquial Oriental languages should be added to the three modern European languages, so as to give the candidates the opportunity of selection."

49. I asked the India Office to give me a copy of the "very able paper" of the Civil Service Commission above referred to. The India Office refused to give it to me. I was allowed to see it in the India Office, and I then asked to be allowed to take a copy of it myself there and then. This even was refused to me. I ask this Commission that this Report be obtained and be added here. I say from memory that the Commissioners said that no new legislation was necessary, hereby adding the words—Calcutta, Madras, and Bombay in the Regulations was enough to carry on examinations simultaneously in India and England.

50. The above forms a part of the Report, the other part being a consideration of the advantages and disadvantages of an "exclusive" Covenanted Civil Service. With this latter part I have nothing to do here. The first part quoted above about the admission of natives into the Covenanted Civil Service was never as far as I know published.

51. It is a significant fact that the Report of the public Service Commission on the two subjects of the so-called "Statutory" Service and simultaneous examinations being in accordance with (what I believe and will show further on) the determined foregone conclusions of the Government of India and the Secretary of State, was published and is being repeatedly used by Government in favour of their own proceedings, while the Report of 1860 of the Committee of five Members of Council of the Secretary of State for India, was not only never published by Government as far as I

know, but even omitted in the Return made in 1879 on "Civil Service" (Return [C. 2376] 1879). Even the Public Service Commission has not given, I think, the Report of 1860.

52. No action was taken on this part of the Report of 1860. This Report was made thirty-seven years ago, and even so early as then it was considered, and strongly recommended, that simultaneous examinations was the only way of redeeming the honour of England and of doing justice to India. The report was suppressed and put aside, as it did not suit the views of the Secretary of State for India, who himself had appointed the Committee.

53. Thus the new stage of the Proclamation of 1858, with all the hopes and joy it had inspired, began so early as 1860 to be a grievous disappointment and a dead letter, just as dead as the Act of 1833.

54. The next stage in this sad story is again a revival of hope and joy in a small instalment of justice by a partial fulfilment of all the pledges of 1833 and 1858. This was a bright spot in the dark history of this question, and the name of Sir Stafford Northcote will never be effaced from our hearts.

55. Sad to say, it was to be again darkened with a disappointment. On August 13th, 1867, the East India Association considered the following memorial proposed by me, and adopted it, for submission to Sir Stafford Northcote (Lord Iddesleigh), the then Secretary of State for India:

56. "We, the members of the East India Association, beg respectfully to submit that the time has come when it is desirable to admit the natives of India to a larger share in the administration of India than hitherto.

57. "To you, Sir, it is quite unnecessary to point out the justice, necessity, and importance of this step, as in the debate in Parliament, on May 24th last, you have pointed out this so emphatically and clearly that it is enough for us to quote your own noble and statesmanlike sentiments. You said: 'Nothing could be more 'wonderful than our empire in India; but we ought to 'consider on what conditions we hold it and how our 'predecessors held it. The greatness of the Mogul 'Empire depended upon the liberal policy that was 'pursued by men like Akbar, availing themselves of 'Hindu talent and assistance and identifying themselves 'as far as possible with the people of the country. He 'thought that they ought to take a lesson from such a 'circumstance, and if they were to do their duty towards 'India they could only discharge that duty by obtaining 'the assistance and counsel of all who were great and 'good in that country. It would be absurd in them to 'say that there was not a large fund of statesmanship 'and ability in the Indian character' (*Times* of May 25th, 1867).

58. "With these friendly and just sentiments towards the people of India we fully concur, and, therefore, instead of trespassing any more upon your time, we beg to lay before you our views as to the best mode of accomplishing the object.

59. "We think that the competitive examination for a portion of the appointments to the Indian Civil Service should be held in India, under such rules and arrangements as you may think proper. What portion of the appointments should be thus competed for in India we cannot do better than leave to your own judgment. After the selection is made in India, by the first examination, we think it essential that the selected candidates be required to come to England to pass their further examinations with the selected candidates of this country.

60. "In the same spirit, and with kindred objects in view for the general good of India, we would ask you to extend your kind encouragement to native youths of promise and ability to come to England for the completion of their education. We believe that if scholarships tenable for five years in this country were to be annually awarded by competitive examination in India to native candidates between the ages of fifteen and seventeen, some would compete successfully in England for the Indian Civil Service, while others would return in various professions to India, and where by degrees they would form an enlightened and unprejudiced class, exercising a great and beneficial influence on native society, and constituting a link between the masses of the people and their English rulers.*

61. "In laying before you this memorial, we feel assured, and we trust that you will also agree with us that this measure, which has now become necessary by the advancement of education in India, will promote and strengthen the loyalty of the natives of India to the British rule, while it will also be a satisfaction to the British people to have thus by one more instance practically proved its desire to advance the condition of their Indian fellow-subjects, and to act justly by them.

62. "We need not point out to you, Sir, how great an encouragement these examinations in India will be to education. The great prizes of the appointment will naturally increase vastly the desire for education among the people."

63. A deputation waited on Sir Stafford Northcote on 21st August, 1867, to present the petition. In the course of the conversation, Colonel Sykes explained the objects, and after some further conversation, Sir Stafford Northcote said:

64. "He had the question under consideration, and had conversed with Sir Herbert Edwards and others on it, and Sir Herbert had furnished him with a paper on it. Two plans were suggested—the one proposed that appointments should be assigned for competition in India, the other that scholarships should be given to enable natives to come to finish their education in England. The first would manifestly be the most convenient for the natives themselves; but it was urged in favour of the second that it would secure a more enterprising class than the first—men with more backbone—and he admitted the force of that. Moreover, he quite saw the advantage to India of a more efficient class which had had an English training. He took a great interest in the matter, and was inclined to approve both proposals. He was corresponding with Sir J. Lawrence and the Indian Government on the subject" (*Journal of the East India Association*, Vol. I., pp. 126-7).

65. In 1868, Sir Stafford Northcote, in paragraph 3 of his despatch, Revenue No. 10, of 8th February 1868, said as below:—

"This is a step in the right direction, of which I cordially approve, but it appears to me that there is room for carrying out the principle to a considerable extent in the regulation provinces also. The Legislature has determined that the more important and responsible appointments in those provinces shall be administered exclusively by those who are now admitted to the public service solely by competition; but there is a large class of appointments in the regulation as well as in the non-regulation provinces, some of them scarcely less honourable and lucrative than those reserved by law for the Covenanted Civil Service, to which natives of India have certainly a preferential claim, but which, as you seem to admit, have up to this time been too exclusively conferred upon Europeans. *These persons, however competent, not having entered the service by the prescribed channel, can have no claim upon the patronage of the Government, none, at least, that ought to be allowed to override the inherent rights of the natives of the country; and, therefore, while all due consideration should be shown to well-deserving incumbents, both as regards their present position and their promotion, there can be no valid reason why the class of appointments which they now hold should not be filled, in future, by natives of ability and high character.*

66. I only note this here as what Sir Stafford Northcote had prescribed and instructed the Government of India for the uncovenanted services, but which instructions have also been made a dead letter as usual. I do not in this statement discuss this branch of the subject, viz., the uncovenanted service, except for some short reference to some subsequent grievous events. I content myself with an expression of the Duke of Argyll on what Sir Erskine Perry describes in his "Memorandum" addressed to Lord Salisbury on 9th December, 1876, as "the vicious practice, supposed "to be rapidly growing up in India, of appointing "Englishmen to all the well-paid uncovenanted "offices." The Duke of Argyll in his despatch (10th March, 1870, Financial) said: "The principle which "Her Majesty's Government steadily kept in view "throughout the discussion on these furlough rules is, "that the uncovenanted Service should be principally "reserved for the natives of the country, and that "superior appointments, which require English train-"ing and experience, should be made as heretofore in "England. And they look with great disfavour on

* This clause was an addition proposed by Sir Herbert Edwards.

" the system which appears to be growing up in India " of appointing Englishmen in India to situations that " ought only as a rule to be filled by civilians by open " competition."

67. All such instructions, as usual, are thwarted by what Lord Lytton calls "subterfuges" and great ingenuity.

68. While Sir Stafford Northcote was considering, maturing, and preparing to bring into action the petition of the East India Association, Mr. Fawcett raised the subject in the House of Commons. Referring to simultaneous examinations for the Covenanted Service, he said:

Hansard, Vol. 191, pp. 1,839-40.
May 8th, 1868.

69. "There would be no difficulty in carrying out this plan. . . . His proposal was that there should be examinations at Calcutta, Madras, and Bombay, that there should be the same papers and the same tests as in London, and the successful candidates, whether English or native, should spend two years in this country. To this he had reason to believe, from memorials he had received from Calcutta and Bombay, the natives would not object, though they naturally objected to coming over to England in the first instance without any guarantee of success. . . . All they asked for was to be subjected to precisely the same trial as the English. . . . With reference to their alleged inferiority of character he had asked what would be the effect on English character if we, having been subjected, were debarred from all but the meanest offices of the State. Our civilisation and our literature would be destroyed. Nothing would save us from debasement. It was an indisputable fact that many natives competent to govern a Province were fulfilling the humblest duties at salaries less than was received by the youngest member of the Indian Civil Service. Lord Metcalf had well said that the bane of our system was that the advantages were reaped by one class and the work was done by another. . . . Sir Bartle Frere, in one of his despatches, said he had been much struck with the fact that the ablest exponents of English policy and our best coadjutors in adapting that policy to the wants of the various nations occupying Indian soil were to be found among the natives who had received a high-class English education."

Hansard, Vol. 191, p. 1843.
May 8th, 1868.

70. Mr. Fawcett moved, "That this House whilst " cordially approving of the system of open competition " for appointments in the East India Civil Service, is " of opinion that the people of India have not a fair " chance of competing for these appointments, as long " as the examinations are held nowhere but in London: " this House would therefore deem it desirable that " simultaneously with the examination in London, the " same examination should be held in Calcutta, Bombay " and Madras." I may here remark that at this time and till 1876 the Report of the five Councillors of the India Office of 1860, which I have given before, was not known to anybody outside, and Mr. Fawcett could not have known anything about it.

71. In the same speech from which a passage is extracted in the Memorial of the East India Association, Sir Stafford Northcote has said, "The English " Government must necessarily labour under great " disadvantages, and *we should endeavour* as far as " possible to develop the system of native government, " to bring out native talent and statesmanship, and to " enlist in the cause of government all that was great " and good in them."

72. The outcome of the petition of the East India Association, Mr. Fawcett's motion, and Sir Stafford Northcote's favourable reception of the petition, was that Sir Stafford Northcote introduced a clause in his Bill entitled "the Governor-General of India Bill" to grant the first prayer of the petition; and the Governor-General, Lord Lawrence, published a Resolution on 30th June, 1868, to grant the second prayer of the Memorial, and some scholarships were actually commenced to be given. But by a strange fatality that pursues everything in the interests of the Indians, the scholarships were soon abolished.

73. I do not enter into any details of this incident, as it affects only in an indirect manner and to a very small extent the question I am considering, viz., the admission of Indians in the Covenanted Civil Service.

74. I revert to the clause introduced by Sir Stafford Northcote in 1868. As this clause will come further on in the course of correspondence, I do not repeat it here.

75. This clause was subsequently passed in 1870, under the Duke of Argyll as Secretary of State, who communicated it to the Government of India by a despatch of 31st March, 1870. The Government of India being dilatory, as it is generally the misfortune of Indian interests, the Duke of Argyll in his despatch of 18th April, 1872, reminded the Government of India about the rules required by the Act, as follows:

76. "Referring to the 6th section of the 33rd Victoria, cap. 3, I desire to be informed whether your Excellency in Council has prescribed the rules which that Act contemplates for the regulation of the admission of natives to appointments *in the Covenanted Civil Service* who have not been admitted to that service in accordance with the provisions of the 32nd section of the 21st and 22nd Victoria, cap. 106."

77. The dilatoriness of the Government of India continuing, the Duke of Argyll again reminded the Governor-General of India in a despatch of 22nd October, 1872:

"I have not received any subsequent communication from your Excellency's Government on the subject, and therefore conclude that nothing has been done, although I addressed your Government on the subject on 18th April last."

78. These two reminders were not known to the public until a Return was made in 1879 [C—2,376].

79. Three years passed after the enactment of the clause, and the public not knowing of anything having been done, the East India Association felt it necessary to complain to the Duke of Argyll on the subject.

80. The following is the correspondence between the East India Association and Mr. Grant Duff in 1873, giving His Grace's speech, and a brief account of the events from 1867 to 1873:

"To M. E. Grant Duff, Esq., M.P.,
"Under Secretary of State for India, India Office.

"East India Association,
"20, Great George Street, Westminster,
"London, September, 1873.

Sir,

81. "By the direction of the Council of the East India Association, I have to request you to submit this letter for the kind consideration of his Grace the Secretary of State for India.

82. "On the 21st August, 1867, this Association applied to Sir Stafford Northcote, the then Secretary of State for India, asking that the competitive examination for a portion of the appointments to the Indian Civil Service should be held in India, under such rules and arrangements as he might think proper, and expressing an opinion that, after the selection had been made in India by the first examination, it was essential that the selected candidates should be required to come to England to pass their further examinations with the selected candidates for this country.

83. "Sir Stafford Northcote soon after introduced a clause in the Bill he submitted to Parliament, entitled 'The Governor-General of India Bill.'

84. "The enactment of this Bill continued in abeyance, until, under the auspices of his Grace the present Secretary of State, it became law on the 25th March, 1870, as 'East India (Laws and Regulations) Act.' Moving the second reading of the Bill on the 11th March, 1869, his Grace, in commenting upon clause 6, in a candid and generous manner made an unreserved acknowledgment of past failures of promises, non-fulfilment of duty, and held out hopes of the future complete fulfilment to an adequate extent, as follows:

85. "'I now come to a clause—the 6th—which is one of very great importance involving some modification in our practice, and in the principles of our legislation *as regards the Civil Service in India.* Its object is to set free the hands of the Governor-General, under such restrictions and regulations as may be agreed to by the Government at home, *to select, for the Covenanted Service of India, natives of that country,* although they may not have gone through the competitive examination in this country. It may be asked how far this provision is consistent with the measures adopted by Parliament for securing efficiency in that

service; but there is a previous and, in my opinion, a much more important question which I trust will be considered—how far this provision is essential to enable us to perform our duties and fulfil our pledges and professions towards the people of India? . . .

86. "'With regard, however, *to the employment of natives in the government of their country in the Covenanted Service* formerly of the Company, and now of the Crown, I must say that we have not fulfilled our duty, or the promises and engagements which we have made.

87. "'In the Act of 1833 this declaration was solemnly put forth by the Parliament of England: "And be it enacted that no native of the said terri- " tories, nor any natural-born subject of his Majesty " resident therein, shall, by reason only of his religion, " place of birth, descent, colour, or any of them, be " disabled from holding any place, office, or employ- " ment under the said Company."

88. "'Now, I well remember that in the debates in this House in 1853, when the renewal of the charter was under the consideration of Lord Aberdeen's Government, my late noble friend Lord Monteagle complained, and I think with great force, that, while professing to open every office of profit and employment under the Company or the Crown to the natives of India, we practically excluded them by laying down regulations as to fitness which we knew natives could never fulfil. If the only door of admission to the Civil Service of India is a competitive examination carried on in London, what chance or what possibility is there of natives of India acquiring that fair share in the administration of their own country which their education and abilities would enable them to fulfil, and therefore entitle them to possess? I have always felt that the regulations laid down for the competitive examination rendered nugatory the declaration of the Act of 1833; and so strongly has this been felt of late years by the Government of India that various suggestions have been made to remedy the evil. One of the very last—which, however, has not yet been finally sanctioned at home, and respecting which I must say there are serious doubts—has been suggested by Sir John Lawrence, who is now about to approach our shores, and who is certainly one of the most distinguished men who have ever weilded the destinies of our Indian empire. The palliative which he proposes is that nine scholarships—nine scholarships for a Government of upwards of 180,000,000 of people!—should be annually at the disposal for certain natives, selected partly by competition and partly with reference to their social rank and position, and that these nine scholars should be sent home with a salary of 200*l.* a year each, to compete with the whole force of the British population seeking admission through the competitive examinations. Now, in the first place, I would point out the utter inadequacy of the scheme to the ends of the case. To speak of nine scholarships distributed over the whole of India as any fulfilment of our pledges or obligations to the natives, would be a farce. I will not go into details of the scheme, as they are still under consideration; but I think it is by no means expedient to lay down as a principle that it is wholly useless to require natives seeking employment in our Civil Service to see something of English society and manners. It is true that in the new schools and colleges they pass most distinguished examinations, and, as far as books can teach them, are familiar with the history and constitution of this country; but there are some offices with regard to which it would be a most important, if not an essential, qualification that the young men appointed to them should have seen something of the actual working of the English constitution, and should have been impressed by its working, as anyone must be who resides for any time in this great political society. Under any new regulations which may be made under this clause, it will, therefore, be expedient to provide that natives appointed to certain places shall have some personal knowledge of the working of English institutions. I would, however, by no means make this a general condition, for there are many places in the Covenanted Service in India, for which natives are perfectly competent, without the necessity of visiting this country; and I believe that by competitive examinations conducted at Calcutta, or even by pure selection, it will be quite possible for the Indian Government to secure able, excellent and efficient administrators.'

89. "The clause thus introduced, in a manner worthy of an English generous-minded nobleman, and passed into law, is as follows:—

90. "'6. Whereas it is expedient that additional facilities should be given *for the employment of natives of India, of proved merit and ability, in the Civil Service of Her Majesty in India*, be it enacted that nothing in the "Act for the Government of India," twenty-one and twenty-two Victoria, chapter one hundred and six, or in the "Act to confirm certain appointments in " India, and to amend the law concerning the Civil " Service there," twenty-four and twenty-five Victoria, chapter fifty-four, or in any other Act of Parliament, or other law now in force in India, shall restrain the authorities in India, by whom appointments are or may be made to offices, places, and employments *in the Civil Service of her Majesty in India*, from appointing any native of India to any such office, place, or employment, although such native shall not have been admitted to the said Civil Service of India in manner in section thirty-two of the first-mentioned Act provided, but subject to such rules as may be from time to time prescribed by the Governor-General in Council, and sanctioned by the Secretary of State in Council, with the concurrence of a majority of members present; and that, for the purpose of this Act, the words "natives of India" shall include any person born and domiciled within the dominions of her Majesty in India, of parents habitually resident in India, and not established there for temporary purposes only; and that it shall be lawful for the Governor-General in Council to define and limit from time to time the qualification of natives of India thus expressed; provided that every resolution made by him for such purpose shall be subject to the sanction of the Secretary of State in Council, and shall not have force until it has been laid for thirty days before both Houses of Parliament.'

91. "It is now more than three years since this clause has been passed, but the Council regret to find that no steps have apparently yet been taken by his Excellency the Viceroy to frame the rules required by it, so that the natives may obtain the due fulfilment of the liberal promise made by his Grace.

92. "The natives complain that, had the enactment referred to the interests of the English community, no such long and unreasonable delay would have taken place, but effect would have been given to the Act as quickly as possible, *and they further express a fear that this promise may also be a dead-letter.**

93. "The Council, however, fully hope that further loss of time will not be allowed to take place in promulgating the rules required by the Act. The natives, after the noble and generous language used by his Grace, naturally expect that they will not be again doomed to disappointment, and most anxiously look forward to the promulgation of the rules—to give them, in some *systematic* manner, 'that fair share in the 'administration of their own country which their 'education and abilities would enable them to fulfil, 'and therefore entitle them to possess,' not only as a political justice, but also as a national necessity, for the advancement of the material and moral condition of the country.

" I remain, &c.,
" W. C. PALMER, Capt.,
" Acting Honorary Secretary of the East India Association."

" India Office, London,
" October 10th, 1873.

"SIR,—

94. "I AM directed by the Secretary of State for India in Council to acknowledge the receipt of your letter of the 2nd October, relative to the provisions of the 33rd Victoria, cap. 3, section 6; and to inform you that the subject is understood to be under the consideration of the Government of India, the attention of which has been twice called to it.

95. "2. The Duke of Argyll in Council will send a copy of your letter to the Government of India, and again request the early attention of that authority to that subject.

" I am, &c.,
" (Sd.) M. E. GRANT DUFF.

"The Acting Honorary Secretary,
East India Association."

* To our misfortune it has been made a dead letter.

96. Such is the candid confession of non-performance of duty and non-fulfilment of solemn pledges for thirty-six years, and the renewed pledge to make amends for past failures and provide adequate admission for the future for at least some share in the administration of our own country. The inadequacy is clearly shown by the ridicule of nine scholarships for 180,000,000 souls, and the proposal to adopt means for the abolition of the monopoly of Europeans. When was this confession and this new pledge made? It was to pass the 6th clause of Act 33 Vic., cap. 3. The clause was passed on 25th March, 1870, one year after the above speech was made, and nearly three years after it was first proposed. Twice did Sir C. Wingfield ask questions in the House of Commons, and no satisfactory reply was given. At last the East India Association addressed the letter which I have given above to the India Office, and from the reply it will be seen how slow our Indian authorities had been, so as to draw three reminders from the Secretary of State.

97. With regard to the remark in the letter as to the complaint of the natives that, "had the enactment "referred to the interests of the English community, "no such long and unreasonable delay would have "taken place," I need simply point to the fact of the manner in which the Cooper's Hill College was proposed and carried out promptly and with no difficulty raised, as is always raised against Indian interests.

98. In 1879 the India Office made a Return [C—2,376] on the ("Civil Service"). In this Return, after the despatch of the Secretary of State for India of 22nd October, 1872, no information is given till the Government of India's despatch of May 2nd, 1878.

99. In this Return, as I have said already, the report of the Committee of the five members of the Council of the Secretary of State of 1860, recommending that simultaneous examinations was the only fair way of redeeming the honour of the British name and doing justice to the Indians, was omitted. There is a despatch of the Government of India of 1874, which Sir E. Parry in his memorandum describes as follows:

100. "Nearly two years afterwards (20th August, No. 31 of 1874) the Government of India replied to this despatch, transmitting rules, but noticing very jejunely the principal question raised by his Grace. Rules were finally suggested for adoption by the Secretary of State, those originally transmitted being deemed by him, under legal advice, to place too narrow a construction on the statute" (Public Despatch to India, No. 131 of 20th August, 1874).

101. These documents also have no place in the Return. Who knows what other inconvenient documents also may have not appeared? This is always the difficulty in Indian matters for Indian interests. The public can never know the whole truth. The Government put forward only such information as they like, and the public is left in the dark, so as not to be in a position to judge rightly.

102. I may also mention that the despatch of the Duke of Argyll (10th March 1870, Financial), to which I have already referred, has also not been given in the Return.

103. Of course, I am not surprised at these omissions. It is our fate, and the usual ways of an arbitrary regime. But why I mention this is that the public are misled and are unable to know the true state of a case in which Indian interests are involved; the public cannot evolve these suppressions from their inner consciousness.

104. And still the outside public and the non-official witnesses are sometimes blamed for not supplying criticisms on the statements made by the officials of Government!

105. Again, there is the despatch of Lord Salisbury of 10th February 1876, not given in the Return. Sir E. Perry, referring to this despatch, says: "Lord "Salisbury decided the matter once for all in his "despatch of 10th February, 1876, Financial, in which "he quoted the Duke of Argyll's despatch of 1870 "(*Supra*), and after stating that he concurred in the "views thus expressed, he proceeded to lay down precise "rules, by which the appointment of Englishmen in "India to the higher uncovenanted offices, should in "future be restricted." Now I cannot say whether all these suppressed documents were satisfactory or not, whether they are published in some other place, but when the India Office omits such information in a Return on the subject itself, what are we to do? And if we criticise upon imperfect information, the authorities come down upon us denouncing us in all sorts of ways for our wrong statements, exaggerations, inaccuracies, and what not.

106. The next despatch that the Return gives, is that of the Government of India of 2nd May, 1878. It was in connection with this despatch that Lord Lytton wrote a note dated 30th May. In this note he had the courage to expose the whole character of the conduct of Indian authorities in both countries since the passing of the Act of 1833, denouncing that conduct as consisting of deliberate, transparent subterfuges, and as making promises to the ear and breaking it to the hope. Here are Lord Lytton's own words, referring to the Act of 1833:

107. "The Act of Parliament is so undefined, and indefinite obligations on the part of the Government of India towards its native subjects are so obviously dangerous, that no sooner was the Act passed than the Government *began to devise means for practically evading the fulfilment of it.* Under the terms of the Act, which are studied and laid to heart by that increasing class of educated natives whose development the Government encourages without being able to satisfy the aspirations of its existing members, every such native if once admitted to Government employment in posts previously reserved to the Covenanted Service is entitled to expect and claim appointment in the fair course of promotion to the highest post in that service.

108. "We all know that these claims and expectations never can or will be fulfilled. We have had to choose between prohibiting them and cheating them: and we have chosen the least straightforward course. The application to natives of the competitive examination system as conducted in England, and the recent reduction in the age at which candidates can compete, are all so many deliberate and transparent subterfuges for stultifying the Act and reducing it to a dead letter. Since I am writing confidentially I do not hesitate to say that both the Governments of England and of India appear to me, up to the present moment, unable to answer satisfactorily the charge of having taken every means in their power of breaking to the heart the words of promise they had uttered to the ear."

109. I admire the English candour and courage with which this confession is made. But I protest that so far as the people, the Parliament and the Sovereign are concerned, it is an injustice to them to put the dishonour of "subterfuges" to their charge. The truth I believe to be is that the Sovereign, the Parliament and the people of this country, sincerely meant what they said — but that their servants, the executive authorities in both countries, uncontrollable and free to follow their own devices, frustrated the highest and noblest desires of the Sovereign and the people by "deliberate and transparent subterfuges."

110. In India a righteous system can be adopted, as many a statesman has declared, by which both England and India may be blessed and benefited, and for which purpose the Indians had been crying all along in the wilderness. The Sovereign, the Parliament and the people have done all that could be desired. The only misfortune is that they do not see to their noble wishes and orders being carried out, and leave their servants to deprive India of all that is most dear and necessary to the human existence and advancement—wealth, wisdom and work—material and moral prosperity. Reverting to Lord Lytton's true confession about "subterfuges," one would think that after such confession some amends will be made. Far from it. This despatch of 2nd May, 1878, will remain one of the darkest sections in this sad story.

111. What did the Government propose in this despatch? To destroy everything that is dearest to the Indian heart—his two great Charters of 1833 and 1858, the Act of partial justice of 1870—to deprive him of the whole political existence of equality of Indians as British citizens which—at least by law, if not by deed or action of the authorities—they possessed and make them the *Pariahs* of the high public service.

112. Mark! by the Act of 1870, the Indians were to have a distinct proportion of appointments (which was fixed by the Government of India to be about one-fifth, or about 7 every year) in the *Covenanted Civil Service* —which meant that in the course of 25 to 30 years, the duration of the service of each person, there would gradually be about 180 to 200 Indians admitted into the Covenanted Civil Service. This was a bitter pill for the Anglo-Indians, official and non-official. The

Government resorted to every subterfuge, to ignore, and with passive resistance to make the Act a dead letter. This not succeeding, they deliberately proposed to throw aside all Acts, Resolutions, and Proclamations —all pledges and laws of equality, and to establish a "close native Civil Service;" that is to say, to deprive the natives once and for ever of any claim to the whole higher Covenanted Services, and *by law* be shut up to a lazaretto of a miserable close service.

113. And what was to be *this close* service? Not even to the extent to which the Act of 1870 led to the hope of the share in the Covenanted Civil Service—but only to propose to assign certain fixed appointments now held by the Covenanted Service, and to deprive the uncovenanted service of some of their appointments to cast them into this service; that is to say, in reality to make a "pariah" service of a small number of Covenanted Service employments—about 90 or so (the uncovenanted being already the Indian's own)—in place of what the Act of 1870 would have entitled them, to the extent of 180 or more, and to be eligible to the *whole* Covenanted Service employments; and what is still worse, and exhibits the inner spirit, that even this miserable so-called "close" service was not to be entirely reserved for the Indians, but, as I understand, a door is left open for Europeans also to get into it. And still more the Government of India so mercilessly wanted to put the badge and stamp of inferiority and exclusion upon the Indians at large and rob them of their only consolation, their only hope and charter, that they already possessed by law and by pledges, for equality of British citizenship with the British subjects of this country. But there is something still worse; the Government coolly proposed not only not to give them simultaneous examinations in India, but to deprive them even of the right they now possess, of competing for the Covenanted Service in this country itself.

114. The Government of India said, in cold blood, that "the ordinary Covenanted Civil Service should no "longer be open to natives;" thus proposing that the Acts of 1833 and 1870, and the proclamation should be thrown to the winds. So these Acts and the proclamations of the Sovereign upon which hangs all our devoted loyalty, all our hopes and aspirations (though in all conscience most mercilessly disregarded) all that is at all good and great in the British name in India, all that is to be swept away by a new un-British legislation! The whole despatch is so distressful, so full of false blandishments, that I cannot venture to say anything more about it. The wonder is that on the one hand Lord Lytton exposes the "subterfuges" of the executive, and himself and his colleagues sign such a despatch of 2nd May, 1878. And what is still more curious is this; about seventeen months before this despatch, on 1st January, 1877, at the Delhi Assemblage, on the assumption of the title of Empress of India, Lord Lytton himself on behalf of her Majesty said:

115. "But you, the natives of India, whatever your "race and whatever your creed, have a recognised "claim to share *largely* with your English fellow-"subjects according to your capacity for the task, in "the administry of the country you inhabit. *This* "*claim is founded on the highest justice.* It has been "repeatedly affirmed by British and Indian statesmen "and by the legislation of the Imperial Parliament. "It is recognised by the Government of India as "binding on its honour and consistent with all the "aims of its policy," and all such "highest justice" and all this "binding on honour" ended in this extraordinary despatch of 2nd May, 1878! It is the most dismal page in the whole melancholy affair about the Covenanted Service.

116. But the further misfortune is that since the despatch of 2nd May, 1878, the whole heart and soul of the Government is directed in the spirit of the despatch, and though they have not attempted to alter legislation, they have by persistence and devices most ingeniously carried out their own object, and made the Acts of 1833 and 1870, and the great proclamations, mere dead letters. With trumpet tongues they have proclaimed to the world that the "*close* service" was an extraordinary and generous concession, when in reality we are deprived of what we already possessed by the Act of 1870, and our political position is reduced to the condition of political pariahs.

117. I do not enter here into a discussion of the un-English and subtle procedure by which we are deprived of the so-called "statutory service," which had secured for us no less than a complete and free admission into the whole Covenanted Civil Service, to the number which had been at the time considered for a beginning as a fair proportion of about one-sixth or one-fifth of the total number of this service.

118. There is one other important reason why I do not pursue any more the criticisms upon this despatch of 2nd May, 1878. The Secretary of State, himself found it impossible to accept it, summarily disposed of its fallacies and hollowness, brushed it aside and insisted upon carrying out the Act of 1870.

119. Now before going further, I have to request the Commission to bear in mind that the Government of India had, by this despatch, most earnestly and laboriously committed themselves to a "close native service," and it will be seen that they bided their time and left no stone unturned, by any means whatever, to attain ultimately their object.

120. As I have said above, Lord Cranbrook, the then Secretary of State, would not accept the preposterous despatch, and put down his foot against such openly violating all honourable and solemn pledges of the Sovereign and Acts of Parliament.

121. Lord Cranbrook in his despatch of 7th November 1878, said in reply:

"6. But your proposal of a close native service with a limited class of high appointments attached to it, and your suggestions that the Covenanted Civil Service should no longer be open to natives, involve an application to Parliament which would have no prospect of success, and which I certainly would not undertake. Your lordship has yourself observed that no scheme would have a chance of sanction which included legislation for the purpose of repealing the clause in the Act of 1833 above quoted, and the obstacles which would be presented against any attempt to exclude natives from public competition for the Civil Service would be little less formidable."

122. "10. It is, therefore, quite competent to your lordship's Government to appoint every year to the Civil Service of India any such number of natives as may be determined upon, and the number of covenanted civilians sent out from this country will have to be proportionately decreased. The appointments should in the first instance be only probationary, so as to give ample time for testing the merit and ability of the candidates."

123. "11. It appears to me that the advantages of such a simple scheme will be obvious:—

124. "(i.) It will undoubtedly be much more popular with the natives, as it will place them on a footing of social equality with the covenanted civilian;

125. "(ii.) Inasmuch as it will exclude no civilian at present in India from any office which he has a moral claim to expect, it will avoid any clashing with the vested interests of the Civil Service;

126. "(iii.) It will avoid the necessity of any enhancement of salaries of uncovenanted officers which is now proposed, not because such enhancement is necessary, but from the necessity of creating a class of well-paid appointments to form sufficient prizes for a close native service;

127. "And lastly, it pursues the same system of official training which has proved so eminently successful in India."

128. Thus foiled in the un-English attempt to inflict upon the Indians the most serious political disaster, the Government of India whined and lay low to wait their opportunity, and as compelled, and with bad grace, made the required rules one year after the despatch of 2nd May, 1878.

129. With their despatch of 1st May, 1879, the Government of India sent the rules, and explained in para. 8 of the despatch the proportion of Indians they proposed to select: "the proposed statutory "rules, in brief, provide that a proportion not ex-"ceeding one-sixth of all the recruits added to the "Civil Service in any one year shall be natives "selected in India by the local Governments."

I give here the rules proposed:—

"No. 18.

"RULES for the APPOINTMENT of NATIVES of INDIA to offices ordinarily held by members of Her Majesty's Covenanted Civil Service in India.

130. "In exercise of the power conferred by the Statute 33 Vict., cap. 3, section 6, the Governor-General

in Council has been pleased to make the following rules, which have been sanctioned by the Secretary of State in Council with the concurrence of a majority of members present:—

131. "I.—Each Local Government may nominate persons who are natives of India within the meaning of the said Act, for employment in her Majesty's Covenanted Civil Service in India within the territories subordinate to such Government. Such nominations shall be made not later than the first day of October in each year. No person shall be nominated for employment in the said service after he has attained the age of 25 years, except on grounds of merit and ability proved in the service of Government, or in the practice of a profession.

132. "II.—Nominations under the foregoing rule shall, if approved by the Governor-General in Council, be provisionally sanctioned by him. The total number of nominations so sanctioned in any year shall not exceed one-fifth of the total number of recruits appointed by her Majesty's Secretary of State to the said service in such year; provided that the total number of such nominations sanctioned in each of the years 1879, 1880, and 1881 may exceed the said proportion by two. On sanction being given by the Governor-General in Council, the nominee shall be admitted on probation to employment in the said service; such admission may be confirmed by the Governor-General in Council, but shall not be so confirmed until the Local Government shall have reported to the Governor-General in Council that the probationer has acquitted himself satisfactorily during a period of not less than two years from the date of his admission, and that he has, unless specially exempted by the Governor-General in Council, passed such examinations as may from time to time be prescribed by the Local Government subject to the approval of the Governor-General in Council. In case of persons admitted under these rules after they have attained the age of 25 years, the Governor-General in Council may confirm their admission without requiring them to serve for any period of probation.

133. "III.—Persons admitted under these rules to employment in the said service shall not, without the previous sanction of the Governor-General in Council in each case, be appointed to any of the undermentioned offices, namely:

"Members of a Board of Revenue.
"Secretaries to the several Governments and Administrations in India.
"Chief Magisterial, or Chief Revenue, Officers of Districts.
"Commissioners of Division, or of Revenue.

134. "IV.—Persons admitted under these rules to employment in the said service shall ordinarily be appointed only to offices in the province wherein they were first admitted. But the Governor-General in Council may transfer from one province to another a person finally admitted to employment in the said service.

135. "V.—Any person admitted under these rules may, with the previous sanction of the Governor-General in Council, be declared by the Local Government to be disqualified for further employment in the said service."

136. Two comments suggest themselves with regard to these rules—when read with the light that the Government of India's whole heart was in the "close native service"—and that, therefore, to carry out loyally the Act of 1870 was naturally against their grain.

137. At the very beginning they began to nibble at the Statute of 1870 and proposed in Rule III not to put natives on the same footing with Europeans with regard to all high offices. On this unworthy device I need not comment, as the Secretary of State himself struck out this Rule III without much ceremony.

138. Now, whether intentionally or unintentionally, the rules had been so framed that had the Government of India sat down to devise the most effective means of bringing discredit and failure on the service under the Act of 1870, they could not have done better or worse than these rules. These Indian civilians were to be the colleagues of and to do the duties with the best educated and severely tested (educationally, physically and morally) English youths. Particular care was taken not to prescribe any systematic compulsory rules for such high test and for obtaining recruits worthy of being included in such a highly trained service as the Covenanted Civil Service, of which these Indians were to be an integral part and in which service they were to be exactly on the same footing as English civilians. This was the crux and the spirit of the whole matter; the rules simply made the matter one of patronage and back-door influence. It needs no stretch of the imagination to see that such a course could lead only to one result, as it has always done, viz., failure. It was absurd to expect that such Indian civilians could prove as successful and efficient as the English civilians so well prepared. This was the first covert blow given by the Government of India at the very birth of the operation of the Act of 1870, and unfortunately Lord Cranbrook did not see this ingenious device.

139. The Commission can hardly realise the intensity of the gratitude of the Indians to Sir Stafford Northcote for proposing, and the Duke of Argyll for passing, the clause in the Act for 1870, and not less intense was their gratitude to Lord Cranbrook and to Sir Erskine Perry who co-operated with him, for the determination with which Lord Cranbrook overcame all strenuous opposition and the blandishments of the Government of India of their own good will and justice to the Indians; and he compelled that Government to give effect to the Act of 1870.

140. The clause was at last given effect to, though with great reluctance and under compulsion, after ten long years. This is generally the case. For all Indian interests the officials always require long and most careful and most mature consideration, till by lapse of time the question dies. Under Lord Cranbrook this clause had better fortune, but only to end in utter and more bitter disappointment to the Indians. The first appointments under the clause, though after a delay of ten years, again infused a new life of loyalty and hope in the justice of the British people, throughout the length and breadth of India. It was a small instalment, but it was a practical instalment, and the first instalment of *actual justice*. And it was enough, for an ever disappointed and unjustly treated people, to rejoice, and more so for the future hope of more justice and of righteous rule; little foreseeing to what bitter disappointment they were to be doomed in the course of the next ten years! The first appointments were made under the rules in 1880. Now we come to the next melancholy stage.

141. The immediate development of the compulsion on the Government of India to carry out the Clause of 1870—coupled with the fear of the possible effect of the despatch of Sir Stafford Northcote of 8th February, 1868, to restrict employment of Europeans to those only who pass the examination here, and to insist upon the inherent rights of the Indians to all appointments—was to produce a sullenness of feeling and great vexation among the Anglo-Indian body generally (with, of course, honourable and noble exceptions).

142. I do not enter, as I have already said, upon the latter question of the uncovenanted service. I mention it here simply because it added to the anger of the Anglo-Indians against the noble policy of men like Sir Stafford Northcote. I confine myself to the sad story about the admission of Indians in the Covenanted Civil Service.

Well, the so-called "statutory" service was launched in 1880. It was called by a distinctive name "statutory" as if the whole Covenanted Service was not also a "statutory" service, and as if the Clause of 1870 was not simply for full admission into the whole Covenanted Service. But what is in a name? The Government of India knew the value of creating and giving a distinct name to the service so that they may with greater ease kill it as a separate service; and at last, kill it they did. The Anglo-Indians, official and non-official, were full charged with sullenness and anger, and with the spark of the "Ilbert Bill" the conflagration burst out.

143. Here I may point out how shrewdly Lord Salisbury, while fully approving the Clause of 1870, had prophesied the coming storm. On the debate on the Clause in 1870, Lord Salisbury had said:

144. "Another most important matter is the admission of natives to employments under the Government of India. I think the plan of the noble duke contained in this Bill is, I believe, the most satisfactory solution of a very difficult question." And after so fully accepting the clause, he said: "One of the most serious dangers you have to guard against

" is the possibility of *jealousy* arising from the intro-
" duction of natives into the service."

145. Owing to this jealousy ten years elapsed before any action was taken on the Act of 1870, and that even *under compulsion* by Lord Cranbrook. Before three years after this effect was given to the Clause, Lord Salisbury's prophecy was fulfilled. Explosion of "jealousy" burst out over the Ilbert Bill.

146. I cannot enter here into the various phases of the excitement on that occasion, the bitter war that raged for some time against Indian interests. I content myself with some extracts from the expression of Lord Hartington (the Duke of Devonshire) upon the subject. It clearly proves the action of the *jealousy* of the Anglo-Indians. Lord Hartington said (speech, House of Commons, August 23, 1883):

147. "It may by some be thought sufficient to say, that the Anglo-Indian, whatever may be his merits, and no doubt they are great, is not a person who is distinguished by an exceptionally calm judgment."

Hansard, Vol. 283, p. 1818.
August 23, 1883.

148. "I could quote passages in letters in the Indian papers in which it is admitted that the agitation was directed against the policy of the Home Government in providing appointments for native civilians while there are many Europeans without appointments. . . . . I believe that the cause of the prevalent excitement is to be found, not in this measure, but in the general course of policy that has been pursued both by this Government and the late Government. It has been the policy of governments for some years past to impress upon the Government of India the desirability of obtaining the assistance of the native population as far as possible in the government of that country. Over and over again that policy has been inculcated from home. In 1879 a resolution was passed which limited appointments of the value of Rs. 200 a month to officers of the army and to natives. That restriction has been rigidly enforced, and has met with *all kinds of opposition from non-official classes of Europeans, who think that all the appointments must be reserved for them.* The same spirit was shown when it was determined that admission to the Engineering College at Roorki should be confined to natives. . . . Agitation of the same character has been seen before when there was just as little foundation for it. Lord Macaulay, Lord Canning, and other Anglo-Indian statesmen experienced the same kind of opposition from Anglo-Indians; but all these reproaches have recoiled, not against the statesmen with regard to whom they were uttered, but against the persons uttering them themselves. . . .

149. "There is a further reason, in my opinion, why this policy should be adopted, and that is, that it is not wise to educate the people of India, to introduce among them your civilisation and your progress and your literature, and at the same time to tell them they shall never have any chance of taking any part or share in the administration of the affairs of their country, except by their getting rid in the first instance of their European rulers. Surely it would not be wise to tell a patriotic native of India that. . . .

150. "Whatever difference of opinion there may be, there can, in my opinion, be very little doubt that India is insufficiently governed at the present time. I believe there are many districts in India in which the number of officials is altogether insufficient, and that is owing to the fact, that the Indian revenue would not bear the strain if a sufficient number of Europeans were appointed. The Government of India cannot afford to spend more than they do in the administration of the country, *and if the country is to be better governed, that can only be done by the employment of the best and most intelligent of the natives in the service.*"

151. At last, however, the agitation of the Ilbert Bill subsided. The eruption of the volcano of the Anglo-Indian hearts stopped, but the anger and vexation continued boiling within as the cause of the explosion still remained. And the Government of India were biding their time to carry out that most un-English scheme of the despatch of 2nd May, 1878, to create a *pariah* lazaretto of a close service.

152. Owing to the persistence of Lord Cranbrook, the appointments under the Act of 1870 had begun in 1880, and continued to be made, *i.e.*, about six or seven Indians continued to be admitted in the Covenanted Civil Service every year. This main cause of the explosion having continued, and the Government of India having set its heart upon their own scheme of close service, a new departure and development now arose. The question at the bottom was how to knock the "statutory service" on the head, and put down effectively the cry for simultaneous examinations. The explosion under the excuse of the Ilbert Bill did not effect that object, and so, according to Lord Lytton's confession of the general conduct of the Executive, something else should be done.

153. We now enter upon the next stage of this sad story. I shall place some facts, and any fair-minded Englishman will be able to draw his own conclusions. Before I do so, certain preliminary explanation is necessary.

154. In India, when the authorities are decided upon certain views, which are not likely to be readily accepted by the public, a Commission or Committee comes into existence. The members are mostly officials or ex-officials—English or Indians. Some non-officials, English or Indians, or both, are sometimes thrown in, selected by the Government itself. It is a well understood thing that in all matters officials are bound always to take and support the Government views. The ex-officials are understood to be bound by gratitude to do the same. If anyone takes an independent line, either in a Commission or Committee, or in his own official capacity displeases the Government, I cannot undertake to say with instances what happens.

155. Perhaps some Anglo-Indians themselves may feel the sense of duty to supply some instances from their own experience. Almost by accident an instance has just come back before me in the *Champion*, of Bombay, and which gives the incident almost in the author's (Mr. Robert H. Elliot) words: "Mr. Geddes
" came before the Finance Committee (1871–74), and
" that the members thought it well worth examining
" is evidenced by the fact that he was examined at
" very great length. Here was a chance for Duff; he
" thought he would do a very clever thing, and as
" Mr. Geddes had introduced into his financial
" pamphlet some views of rather a novel description, and
" had, besides, made use of some rather out-of-the-way
" illustrations, this gave a good opportunity for putting
" questions in such a way as was calculated to cast ridi-
" cule on Mr. Geddes, and depreciate the value of the
" important points he had brought out. But this was
" far from being all. It was intimated pretty plainly
" to Mr. Geddes that his opinions ought to be in
" harmony with the Government he served, and here
" Mr. Geddes said that he certainly ought to be in
" harmony with the Government, if there was any
" spirit of harmony in it. Mr. Geddes was clearly
" not to be put down, and Duff thought he would try
" something more severe. 'You hold an appointment
" 'in the Government, do you not?' 'Yes,' said
" Mr. Geddes. 'And do you expect to return to that
" 'post?' asked Duff. 'Now, my dear John,' continues
" the author, 'you will not find that question in the
" 'report, for the simple reason that it was ordered to
" 'be expunged.'" Would some Anglo-Indian kindly give us some information of what afterwards became of Mr. Geddes? I would not trouble the Commission with my own treatment before the same Committee, which was anything but fair, except the questions put to me by Mr. Fawcett, because, like Mr. Geddes, I had something novel to say. I would only add that an important and pointed evidence of Lord Lawrence, on the wretchedness and extreme poverty of India, was also suppressed in the Report.

156. The officials have therefore to bear in mind to be in harmony with Government or think of their posts —and I suppose the ex-officials have also to bear in mind that there is such a thing as pension.

157. Here is one more instance. When Mr. Hyndman published his "Bankruptcy of India," Mr. Caird at once wrote to the *Times* contradicting him. The India Office soon after sent him to preside over the Famine Commission. He, though at first much prejudiced by Anglo-Indian views, and going to bless the Government, returned cursing. He made a report on the condition of India, and that being contrary to official views—oh! how Government laboured to discredit him!

158. Lastly, Commissions or Committees report what they like. If they are in the expected harmony with Government, all is well. But anything which Government does not want or is contrary to its views is brushed aside. Reports of Commissions must be in

harmony with the views of the Government. If not, so much the worse for the Commissioners; and this is what has actually happened with the Public Service Commission, which I am now going to touch upon as the next stage in this sad history of the fate of Indians *for services in their own country*.

159. When I came here in 1886, I paid a visit to Lord Kimberley, the Secretary of State for India. I had been favoured with more than an hour's conversation, mainly on the two topics of "statutory service" and simultaneous examinations, and I found him a *determined*, decided opponent to both, and completely, to our misfortune, saturated with Anglo-Indian views —not seeming to realise at all the Indian side. He urged to me all the Anglo-Indian stock arguments, and I saw what he was really aiming at—the very thing which Lord Cranbrook had summarily rejected—the scheme of the Government of India of the despatch of 2nd May, 1878, the close service.

160. From that interview I saw clearly what the "Public Service Commission" was for—that the abolition of the "statutory" service, the suppression of the cry for simultaneous examinations, and the adoption of the scheme of 2nd May, 1878, were determined foregone conclusions.

161. Soon after my conversation with Lord Kimberley, I happened to be on the same boat with Sir Charles Turner on my way to Bombay. Sir Charles Turner was going out by appointment by Lord Kimberley to join the Public Service Commission. I at once prepared a short memorandum, and gave it to him. Afterwards, in the course of the conversation, he told me that he had certain instructions from Lord Kimberley. Sir Charles Turner, of course, could not tell me, whatever they may have been. But I could not help forming my own conclusions from what I had myself learnt from Lord Kimberley himself in my conversation with him.

162. Sir Charles Aitchison was the President of the Commission, and he, as Lieutenant-Governor of the Punjaub, made a representation to the Commission, in which he expressed his clear opposition to the simultaneous examinations. About the "statutory" service he had already most strongly objected to, two years before the appointment of the Commission, in a very inaccurate and hasty argument and on very imperfect information.

163. In a country like India, governed under a despotism, where, under present circumstances, service under and favour of government is to many the all in all, what effect must the declaration of the head of the province, and the well-known decided views of the Government itself, produce upon the invited witnesses —not only official, but non-official also—can hardly be realised by Englishmen, who have their government in their own hands.

164. I was a witness before this Commission. I fully expected that, as I was considered one of the chief complainants in these matters, I would be severely examined and turned inside out. But the Commission, to my surprise, carried on with me more of a light academical debate than a serious practical examination, and seemed wishful to get rid of me quickly, so much so that I was forced to request that a Memorandum which I had placed before them should be added to my evidence on several points.

165. I may here explain that simultaneous examinations was by far the most important matter, and, if granted, would have dispensed with the necessity of the "statutory" service. The chief fight was for simultaneous examinations.

166. First, as far as the "statutory" service is concerned, here is the extraordinary result. In the instructions to the Commission, the object of the Commission was stated, "broadly speaking," "to "devise a scheme which may reasonably be hoped to "possess the necessary elements of *finality*, and to do "*full justice* to the claims of the natives of India to "*higher and more extensive* employment in the public "service"; and in this the Governor-General in Council fully and cordially agreed.

167. This was the promise; and what is the performance? The admission of one-sixth Indians into the Covenanted Service we already possessed by law—and in operation. We were already eligible to all uncovenanted services. Full justice and still higher and more extensive employment were promised—and what did we actually get? We were deprived of what we already by law (of 1870) possessed; and instead of giving us "full justice," it deprived us of all our hopes and aspirations to be admitted to an equality of employment with British officials; and we were coolly, mercilessly, despotically, and illegally consigned to a small pariah service, open to Europeans also—which had been *already schemed and firmly determined upon ten years before* in the despatch of 2nd May, 1878—in utter violation of the Acts of 1833 and 1870, and three gracious proclamations. This is the way in which the Public Service Commission has carried out its object to devise a scheme to possess elements of finality and to do full justice to the claims of the natives to *higher* and *more extensive* employment in the public service.

168. Now, with regard to simultaneous examinations, the conduct of the Public Service Commission seems to be still more extraordinary. Why they actually reported, as far as I can see, in opposition to the weight of evidence, I cannot understand. Mr. William Digby has analysed the evidence in a letter to Lord Cross, of 8th May, 1889, and I append that part of his letter. I asked the Secretary of State to inform me whether Mr. Digby's analysis was correct or not, but the information was not given me.

169. There is again a curious coincidence between the action of Lord Lytton and Lord Dufferin which I may intervene here.

170. Of Lord Lytton, I have already mentioned about the contrast between his speech at the Delhi Durbar in January, 1877, and his action in the despatch of 2nd May, 1878.

171. On 4th October, 1886, was started the Public Service Commission by Lord Dufferin, and in the beginning of the very next year, 1887, on the occasion of the Jubilee, Lord Dufferin said in his Jubilee speech :—

172. "Wide and broad, indeed, are the new fields in "which the Government of India is called upon to "labour, but no longer as aforetime need it labour "alone. Within the period we are reviewing, educa- "tion has done its work, and we are surrounded on "all sides by native gentlemen of great attainments "and intelligence, from whose hearty, loyal, and honest "co-operation we may hope to derive the greatest "benefit. In fact, to an administration so peculiarly "situated as ours, *their advice, assistance, and solidarity* "*are essential to the successful exercise of its functions.* "Nor do I regard with any other feelings than those "of approval and good-will their natural ambition to "be more extensively associated with their English "rulers in the administration of their own domestic "affairs." At the same time the Empress of India thus emphasises her great proclamation of 1858 :—

173. "It had always been, and will always be, her earnest desire to maintain unswervingly the principles laid down in the proclamation published on her assumption of the direct control of the Government of India."

174. And these two declarations of hope and justice came to what end? Within two years—as I have already said, Lord Cross, with a ruthless hand, snatched away from us the small instalment of actual justice which Sir S. Northcote had done to us, consigned us to a small close pariah service, and destroyed virtually all our charters and aspirations.

175. I now come to the last dark section of this sad chapter, which also shows that, to our misfortune, we have had nothing but bitter disappointments—since 1833—nothing but "subterfuges" up to the present day.

176. Propose anything for the benefit of Europeans, and it is done at once. The Royal Engineering College at Coopers Hill and the Exchange compensation allowance are two notorious instances, the latter especially heartless and arbitrary. The Government of India has distinctly admitted that the compensation is illegal. It knew also that it would be a heartless act towards the poverty-stricken people of India. But, of course, when European interests are concerned, legality and heart go to the winds: force is the only law and argument. Here is another curious incident connected both with examinations and Europeans.

177. As I have already placed before the Commission my papers on the entire exclusion of Indians from military and naval examinations, either here or in India, I will not say anything more. The curious incident is this:

178. The War Office would not admit Indians to examinations even in this country, and on no account simultaneously in India. But they allowed Europeans to be examined directly in India. St. George's College, Massoori, examined its boys. A boy named Roderick O'Connor qualified for Sandhurst from the college in 1893. Two boys named Herbert Roddy and Edwin Roddy had also passed from that college.

179. On 2nd June, 1893, the House of Commons passed the resolution to have simultaneous examinations in England and India for all the services for which the examinations are at present held in England alone.

180. Had such a Resolution been passed for any other department of State, it would have never dared to offer resistance to it. But with unfortunate India the case is quite different.

181. The Resolution of 2nd June, 1893, having been carried, the Under-Secretary of State for India (Mr. Russell) said (Hansard, vol. 17, p. 1035): "It may "be in the recollection of the House that in my official "capacity it was my duty earlier in the session to "oppose a Resolution in favour of simultaneous ex- "aminations. But the House of Commons thought "differently from the Government. *That once done* I "need hardly say that *there is no disposition on the part "of the Secretary of State for India or myself to thwart "or defeat the effect of the vote of the House of Commons* "on that Resolution.

182. "We have consulted the Government of India, "and have asked them, as *to the way* in which the "resolution of the House *can best be carried out.* It is "a matter too important to be carried out without the "advice of the Indian Government, and at present "impossible to state explicitly what will be done." Now our Commission will observe that the Government of India was to be consulted, as to *the way* in which the Resolution was to *be best carried out, and not as to whether it was to be carried out or not, nor to thwart or defeat it.* What did the Prime Minister (Mr. Gladstone) say?

183. "The question is a very important one, and has "received the careful consideration of Government. "They have determined that the Resolution of the "House should be referred to the Government of India "without delay, and that there should be a prompt "and careful examination of the subject by that "Government, who *are instructed* to say in *what mode* "in their opinion, and under what conditions and "limitations, the Resolution *could be carried into effect.*" It must be observed again that the Government of India were to be instructed to say *by what mode the Resolution could be carried into effect.*

184. After such declarations by two important officials, what did the Secretary of State do?

185. Did he loyally confine himself to these declarations? We know that Lord Kimberley (who was then the Secretary of State) was dead against simultaneous examinations. He knew full well that the Government of India was well known to the world *to be as dead against any such interest of the Indians.* Sir James Peile in his minute even said as much. And yet in a very clever way the India Office adds a sentence to its despatch virtually telling the Government of India to resist altogether.

186. The last sentence added to the despatch was:

"3. I will only point out that it is indispensable that an adequate number of the members of the Civil Service shall always be Europeans, and that no scheme would be admissible which does not fulfil that essential condition."

187. And further:—

That there should remain no doubt of the real intention of this sentence, six members of the Council wrote vehement minutes emphatically indicating that the Government of India should resist—not obey the instruction as to what mode should be adopted to carry out the Resolution. And thus, knowing full well what the Government of India's views were, knowing also that the Resolution was passed *notwithstanding the opposition of the Government;* knowing also that Mr. Russell had distinctly told the House of the acceptance by the Government of what the House decided, and promising, on behalf of the Secretary of State as well as himself, *not to thwart or defeat the Resolution,* Lord Kimberley sent the Indian lamb back to the Government wolf, as if the Resolution of the House was not of the slightest consequence, and the Governments here and in India were supreme and above the House of Commons. They had always done this for two-thirds of a century to every Act, or Resolution of Parliament, or the Sovereign's Proclamations.

188. With such open suggestion and encouragement from the Secretary of State and his councillors, and with their own firm determination not to allow the advancement of the natives by simultaneous examination—even having only lately snatched away from the hands of the Indians the little instalment of justice that was made by Sir Stafford Northcote and the Duke of Argyll, and was approved by Lord Salisbury—what could be expected in reply to such a despatch? Of course, the Government of India resisted with a will, tooth and nail, as they had always done.

189. At first, the Government of Madras was one for justice. And then, in the vicious circle in which all Indian interests are usually cleverly entangled, the Government here made that very resistance of the Indian Government a subterfuge and excuse for itself—that as the Government of India refuses they could not carry out the resolution! And the House of Commons had, as usual on Indian matters, one more disregard and insult.

190. And thus was one more disappointment—the bitterest of all the 64 years' of disappointments the people of India have suffered. And yet there are men who raise up their hands in wonder that there should be any dissatisfaction among the Indians, when they themselves are the very creators of this discontent and great suffering.

191. I have referred to Lord Kimberley's actions, which showed how he was actuated from the very beginning. Now, even *before* the despatch was sent to India, Lord Kimberley himself showed his full hand, and let the Government of India know, by anticipation, his entire resistance to the Resolution within nine days of the passing of the Resolution on 2nd June, 1893, and ten days *before* the despatch was sent to India. He said (dinner to Lord Roberts by the Lord Mayor—*Times*, 13th June, 1893):

192. "There is one point upon which I imagine, whatever may be our party politics in this country, we are all united: that we are resolutely determined to maintain our supremacy over our Indian empire. That I conceive is a matter about which we have only one opinion, and let me tell you that that supremacy rests upon three distinct bases. One of those bases, and a very important one, is the loyalty and good-will of the Native princes and population over whom we rule. Next, and not less important, is the maintenance of our *European* Civil Service, upon which rests the foundation of our administration in India. . . . . Last, not because it is the least, but because I wish to give it the greatest prominence, we rest also upon the magnificent European force which we maintain in that country, and the splendid army of native auxiliaries by which that force is supported. . . . . Let us firmly and calmly maintain our position in that country; let us be thoroughly armed as to frontier defences, and then I believe we may trust to the old vigour of the people of this country, come what may, to support our supremacy in that great empire."

193. Now, if it was as he said, there was only one opinion and such resolute determination, why on earth was all the fuss and expense of a Public Service Commission made? If European service was a resolute determination, was it not strange to have the subject of simultaneous examinations taken up at all by the Commission on grounds of *reason*—when it was a resolute, arbitrary, foregone conclusion? And why was the statutory service disturbed, when it had been settled by Northcote, Argyll, and Salisbury, and Parliament, as a solution of compromise?

194. In connection with India generally, the Englishman (with some noble exceptions) deteriorates from a lover of liberty to a lover of despotism without the slightest regard as to how the Indians are affected. He suddenly becomes a superior, infallible being, and demands that what he does is right, and should never be questioned. (Mr. Gladstone truly called the "argument "and law of force" as the law and argument of the present Anglo-Indian rule.)

195. My remarks about Lord Kimberley are made with much pain. He is one of the best Englishmen I have ever met with. But our misfortune is this: Secretaries of State (with few exceptions) being not much

conversant with, or students of, the true Indian affairs, place themselves in the hands of Anglo-Indians. If, fortunately, one turns out capable of understanding the just claim of the Indians and does something, some successor, under the everlasting influence of permanent officials, subverts the justice done, and the Indian interests perish, with all their dire consequences. A Sir Stafford Northcote gives, a Lord Cross snatches away.

196. It will be seen that the very claim now put forward by the Indian authorities of having done a great favour by the "Provincial Service" is misleading and not justified. On the contrary, we are deprived of what we already possessed by an Act of Parliament (1870), of admission into the *full covenanted* Civil Service to the extent of about 180 or 200 appointments, while what is given to us with much trumpeting is a miserable "pariah close service" of about 95 covenanted specific appointments, and that even not confined to Indians, but open to Europeans also, and so devised that no regular admission (as far as I know) on some organised system and tests are adopted, and I understand it to be said that some twenty or thirty years will elapse before the scheme will come into some regular operation. Can there be a greater blow and injustice to the Indians and a greater discredit to the authorities? But what is worst of all is that insidious efforts are made to undermine and destroy all our charters of equal British citizenship with the people of this country.

197. Lord Kimberley's speech in support of the present system is the best justification of what Macaulay had said, that "the heaviest of all yokes is the yoke of the stranger." For he does not say a word that if England employs the European Agency for its own sake he should think it just that England should pay for it, or, at least, the greater portion or half of it. Any such act of justice does not seem to occur to the Anglo-Indian "Masters." India alone must pay for whatever the Master wills. And Britain cares not, as it has nothing to pay. Worse still, the masters do not seem to care what deterioration of character and capacity — material and moral — is caused to the Indians.

198. As to the fitness and integrity of the Indians in any kind of situation—military or civil—there is now no room for controversy, even though they have not had a fair trial they have shown integrity, pluck, industry, courage, and culture, to a degree of which the British people may well be proud, as being the authors of it. I have already touched upon the point of fitness in one of the statements.

199. About loyalty. In the despatch of 8th June, 1880, the Government of India itself said; "To the "minds of at least the educated among the people of "India—and the number is rapidly increasing—any "idea of the subversion of British power is *abhorrent* "from the consciousness that it must result in the "wildest anarchy and confusion."

200. The fact is that because India asks and hopes for *British* rule on *British* principles, that the educated are devotedly loyal, and regard their efforts for this purpose as their highest and best patriotism. Nothing can be more natural and sensible.

SUMMARY.

201. In 1833 a noble clause was passed by Parliament —everything that the Indians could desire. Had the Executives loyally and faithfully carried out that clause, India would have been in the course of more than sixty years a prosperous and contented and deeply loyal country, and a strength and a benefit to the British Empire to an extent hardly to be conceived or realised at present, when, by an opposite course, India is afflicted with all the horrors and misery to which humanity can possibly be exposed. After 1833, twenty years passed, but nothing done. Fresh efforts were made in Parliament to put the Indians on the same footing as British subjects, by simultaneous examinations in this country and India. Stanley, Bright, Rich, and others protested to no purpose; the violation of the Act of 1833 continued.

202. Then came the great and glorious proclamation of the Queen in 1858, and a new bright hope to the Indians, but not fulfilled up to the present day. In 1860 a Committee of five members of the Council of the Secretary of State pointed out the dishonour of the British name, and reported that simultaneous examinations were the best method to do justice to the Act of 1833—to no purpose; the Report was suppressed, and the public knew nothing about it. In 1867 the East India Association petitioned for the admission into the Covenanted Civil Service of a small proportion of Indians. Sir Stafford Northcote admitted the justice of the prayer, and proposed a clause to give a partial fulfilment of the Act of 1833. The Duke of Argyll passed it. Lord Salisbury approved of it, but pointed out how the jealousy of the Anglo-Indians would wreck it—a prophecy which did not take long to be fulfilled.

203. The Government of India resisted tooth and nail, and made some outrageous proposals in the despatch of 2nd May, 1878. It was then that Lord Lytton, in a minute, admitted the unworthy policy of "subterfuges" upon which the executives had all along acted since 1833.

204. A strong and justly inclined Secretary (Lord Cranbrook) persisted, brushed aside all resistance and plausibilities, and compelled the Government of India to give effect to the clause. The Government of India, with bad grace and very reluctantly, made the rules—cleverly drawn up to throw discredit upon the service—the worst part was rejected by Lord Cranbrook; but an insidious device remained, and the appointments were begun to be made. The Anglo-Indians boiled with rage, and the explosion on the Ilbert Bill was the open declaration of war.

205. The agitation subsided, but the appointments having remained to be continued, the boiling under the crater continued, and, instead of exploding, the Government resorted to other devices, and gained their settled object with a vengeance—the report of the Public Service Commission confirmed the foregone conclusions against the Statutory Service and simultaneous examinations, and in favour of the "Close Service."

206. The whole position has been thrown back worse than it ever was before.

207. A Conservative (Sir Stafford Northcote) proposed, and a Liberal (Duke of Argyll) passed, the Act of 1870 to do some justice. A Conservative (Lord Cranbrook) insisted upon carrying it out. A Liberal (Lord Kimberley) began to undermine it, and another Conservative (Lord Cross) gave it the death-blow—though, to the humiliation of the House of Commons, the Act remains on the statute book. To-day something given, to-morrow snatched away; Acts and Resolutions of Parliament and Proclamations notwithstanding.

208. Once more Parliament did justice and passed the Resolution, in 1893, for simultaneous examinations, to share the same grievous fate as all its former enactments. And the Indian Executive thus stands proclaimed the supreme power over the heads of all—Parliament, People, and Sovereign.

209. The whole force and object of the two references to our Commission is to reply to Sir Henry Fowler's most important challenge, and that reply mainly depends upon the consideration of the way in which the clauses in the Acts of 1833 and 1870 and the Proclamations are dealt with.

210. Sir Henry Fowler's challenge is this:—The question I wish to consider is, whether that Government, with all its machinery as now existing in India, has, or has not, promoted the general prosperity of the people of India, and whether India is better or worse off by being a Province of the British Crown; that is the test.

211. The question of remedy I have already dealt with in one of my representations to the Commission (Appendix E.)

212. My whole earnest anxiety is, that righteous means may be adopted by which the connection between the two countries may be strengthened with great blessings and benefits to both countries. I speak freely, because I feel strongly that it is a thousand pities that a connection than *can* be made great and good to both countries is blindly being undermined and destroyed with detriment to both. My previous statements have clearly shown that. The whole question of the *blessing* of the connection of England and India upon both countries rests mainly upon the honourable and loyal fulfilment of the Act of 1833 and the Proclamation of 1858: "Righteousness alone will exalt a nation;" "Injustice will bring down the mightiest to ruin" (Salisbury).

213. I conclude with my earnest hope and prayer, that our Commission will pronounce clearly upon all the vital questions involved in their two references on which I have submitted my views.

Yours truly,

DADABHAI NAOROJI.

APPENDIX.

EXTRACT FROM MR. WILLIAM DIGBY'S LETTER OF 8TH MAY, 1889, TO LORD CROSS.

I.—SIMULTANEOUS EXAMINATIONS IN INDIA AND IN ENGLAND.

214. In asking for the examinations for the Covenanted Civil Service to be held simultaneously in India and in England, solely on the grounds of equal justice to the Indian and English subjects of the Queen-Empress, the people of India are simply taking up the position provided for them by the Special Committee of the India Office which sat and reported in 1860. That Committee recommended, as being only fair, the holding, "simultaneously, two examinations, one in "England and one in India, both being, as far as "practicable, identical in their nature." They further recommended that those who compete in both countries should be finally classified in one list, according to merit, by the Civil Service Commissioners. "Were "this inequality removed," added the Committee, "we "should no longer be exposed to the charge of keep-"ing promise to the ear and breaking it to the hope." The proposal for simultaneous examinations had its genesis in your lordship's office, those who proposed it were English officials, and in asking for its adoption Indians are merely acting upon the sense of justice of Englishmen highly experienced in Indian affairs.* It will be obvious, therefore, that such a claim as is put forward is compatible with perfect loyalty to the maintenance of the connection between England and India. The Committee, as will be seen on reference to their Report, were not unanimous in all their conclusions, but on the point I have referred to there was perfect unanimity.

215. On the question of simultaneous examinations, the Public Service Commission reported, in brief, as follows: "That it is inexpedient to hold an examina-"tion in India for the Covenanted Civil Service "simultaneously with the examination in London" ("Summary of Conclusions and Recommendations," para. 128, p. 140). I refer, in this letter, to the summary rather than to the detailed statements in the Report, as I do not at present wish to contest each statement in paragraph 60. Should, however, such an examination become necessary, a criticism in detail of the observations made by the Commissioners cannot, in view of what follows, be less condemnatory than the remarks to be made upon the summary.

216. The recommendation of the Commissioners, my lord, on the question of simultaneous examinations is against the weight of evidence taken by them. An analysis of the opinions expressed by the witnesses and of the witnesses themselves reveals the most startling results. Evidently the Commission has not examined the evidence, or taken it into due consideration. There are, too, certain grave incidents in connection with the manner in which this portion of the evidence was obtained, and the foregone conclusion to which at least one highly placed Member of the Commission had committed himself, as render it more than ever improbable that the Report of the Commission can be held to be deserving of your lordship's confidence or commendation, and which wholly militate against legislation being undertaken to give the recommendations, or some of them, the force of law.

217. I will take the witnesses examined Presidency by Presidency and Province by Province, and show in what direction the balance of testimony lies.

* The members of the Committee were: Mr. J. P. Willoughby, Sir Erskine Perry, Sir W. H. Arbuthnot, Mr. Ross D. Mangles, and Sir E. Macnaghten.

Totals - -	361	163	73

Majority for - - - 198, or 68·8 per cent.
" over Against and Doubtful - - 125, or 60·4 "

218. Of the 361 in favour it may be remarked, 49 or 13·5 per cent. were Europeans not from any one part of the Empire, but from all parts of India.

219. In their Report the Commissioners have not published any statistical information of the kind given above. To obtain it the evidence of every witness, whether his evidence were oral or written, has been examined.

220. The case against the Report, however, is only imperfectly shown even in the statements submitted in the above tabulated particulars. A closer analysis reveals much of great interest and of the highest value.

What is revealed increases one's wonder that, in face of the evidence they took, and in view of the instructions they received the Commissioners could have reported in the sense they adopted. An examination of the following figures will well repay any time bestowed upon them.

222. An examination in detail of the facts summarised above shows that—

(1) Among Europeans the Hon. H. J. Reynolds, C.S.I., Mr. H. J. S. Cotton, Mr. H. M. Kisch, Mr. H. Beveridge, and Mr. C. B. Garret, all civilians of high position, Mr. A. O. Hume, C.B., a retired official of great experience, long service, and almost unequalled knowledge of the country and the people; and

(2) Sir A. W. Croft, K.C.I.E., Director of Public Instruction for Bengal, and Mr. C. H. Tawney, M.A., Principal of the Presidency College, Calcutta, among Educationalists,

were in favour of simultaneous examinations. Of the Indian figures it may be stated that in Class 3*a* against the proposal two of the witnesses were Mahomedans, in Class 4*a* the solitary individual was a Mahomedan, and in Class 4*d* the same thing is true, with this difference, that the witness was a gentleman holding a high position in a Native-Indian State, being Secretary to the Council of his Highness the Nizam of Hyderabad. As much is made of Mahomedan opposition to simultaneous examinations, it may be added here that the principal Moslem officials of Hyderabad were examined—one at Calcutta, one at Madras, others at Bombay. I think it is due that I should state in detail the Indian witnesses in Bengal who gave evidence in favour of simultaneous examinations: a scrutiny of their names and of the positions they hold will unmistakably show that the leading men of wealth, attainments, and position—alike in the professions, in commerce, and in society—are heartily in favour of their countrymen being permitted, by a first examination in India, to compete for the highest places in the gift of the Government of India. They, who have most to lose, are not afraid of ill consequences following. Nearly all that is eminent, learned, energetic, and loyal in Bengal is to be found represented in the following list. A more remarkable consensus of opinion than is afforded in this list could not be obtained in regard to any matter of high importance in any country. I lay the more stress upon the testimony of Bengal for this, probably sufficient, reason. In the Lower Provinces alone in the Empire is there, on any large scale, private property in land. Lord Cornwallis's Permanent Settlement and the creation of a large body of Zemindars have, in Bengal, called a wealthy class into existence. If anywhere in India, it is in Bengal that men are most interested in the maintenance of a strong, efficient, and stable administration. Elsewhere in the Empire the ryotwari system of land tenure does not admit of the growth, on any extensive scale, of a wealthy and cultured class connected with the land. Yet it is in Bengal, where, as I have already said, men have most to lose, that there is the heartiest support, from Hindus and Mahomedans alike, of the proposal for holding simultaneous examinations in England and in India. To anyone acquainted with the personnel of Indian Society in Bengal, the names of the Maharaja Jotendro Mohun Tagore, K.C.S.I., the Maharaja of Durbhanga, Babu Joykissen Mukerji, Kumar Nil Krishna Deb, Nawab Wilayat Ali Khan Bahadur, among Zemindars; Rajah Durga Churn Laha among Merchants, himself the Prince of Indian Merchants; the Hon. C. M. Ghose, High Court, Calcutta, the Hon. Dr. Mohendro Lal Sircar, C.I.E., Nawab Abdul Latif Bahadur, C.I.E. (whose weight and influence with a large section of his community it is impossible to overrate), among Judicial officers; the thirty-nine barristers, vakils, and solicitors mentioned in Class IV*a*., and the gentlemen whose names are given in all the other classes, will be held to represent the flower of wealth, culture, influence, and weighty good sense among seventy millions of people. Of one hundred and forty-four witnesses examined in Bengal—

129 were for Simultaneous Examinations,
9 ,, against,
6 ,, doubtful.

223. That the British Indian Association should have given evidence in favour of the change is, from the point of view of security, of great importance. Its action is as if the Carlton, the Junior Carlton, the St. Stephen's, and the Constitutional Clubs of London were to make a deliverance to the Government of the day on some important matter. Whatever might be said of such a deliverance, it could not be called revolutionary. Considering that Bengal has a third of the whole of the inhabitants of British India within its borders, that Hindu witnesses were ten to one in favour, that nearly one-half of Indian Mahomedans live in this Presidency, and that of fourteen witnesses of this faith examined,

10 were for Simultaneous Examinations, and only
4 ,, against,

the testimony is of so remarkable and so weighty a character as to unprejudiced minds, I submit, to be irresistible. To scorn, or set aside on insufficient grounds, such a representation is to invite discontent.

224. Of Europeans who were examined in Bengal, it is true, there were forty-three against to fourteen in favour. It would be invidious for me to set names on either side against one another, but if this were permissible the force of experience and authority would clearly tell in favour of the smaller numbers. The list of Indians is as follows:—

BENGAL.

INDIANS IN FAVOUR OF SIMULTANEOUS EXAMINATIONS.

225. CLASS I.—COVENANTED CIVIL SERVICE.

Con. No.	No. in Rept.	
1	11	Brojo Nath De, Esq., C.S., Joint Magistrate, Hughli.
2	16	K. G. Gupta, Esq., C.S., Barrister-at-Law, Joint Magistrate and Deputy Collector, Nuddeah.
3	47	B. L. Gupta, Esq., C.S., Officiating District and Session Judge, Furridpore.
4	49	Romesh Chunder Dutt, Esq., Joint Magistrate and Deputy Collector, Bakhergunje.
		Total of Class I. 4

226. CLASS II.—THE STATUTORY CIVIL SERVICE.

1	45	Bu. Ambica Churn, Sen., Assistant Magistrate and Collector, Shahabad.
2	23*s*	Bu. Nanda Kumar Bose, Statutory Civil Service.
3	28*s*	Bu. Surjya Kumar Agasti, Statutory Civil Service.
		Total of Class II. 3

227. CLASS III*a*.—UNCOVENANTED SERVICE, JUDICIAL AND EXECUTIVE.

1	6	Bu. Brojendro Kumar Seal, B.L., District Judge, Bankurah, and Assistant Session Judge, Burdwan.
2	38	Hon. Moulvi Abdul Jubbar, Member of the Bengal Legislative Council, Deputy Magistrate, 24 Pergunas.

Con. No.	No. in Rept.	
3	44	Bu. Obhoy Chunder Dos, Deputy Magistrate and Deputy Collector, 24 Pergunnahs.
4	51	Sarat Chunder Banerji, Esq., M.A., B.L., Extra Assistant Commissioner, Kamrup, Assam.
5	53	Lalla Hukum Chand, M.A., Registrar, High Court, Hyderabad.
6	75	Maulvi Abdul Bari, a member of the Subordinate Judicial Service.
7	76	Bu. Girish Chunder Choudhury, First Subordinate Judge, Patna.
8	82	Bu. Durgagoti Banerji, Deputy Magistrate and Deputy Collector.
9	83	Bu. Srinath Roy, Fourth Judge of the Small Cause Court, Calcutta.
10	85	Bu. Tariny Churn Ghose, Deputy Collector.
11	86	Bu. Rajendra Nath Mitter, Deputy Collector.

1	46	Honourable Chunder Madhub Ghose, Judge, High Court, Bengal.
		Total of Class VIII. -

238. The authorities who would lightly set aside such an expression of opinion would incur a most serious risk. The very significant fact is elicited by this examination of evidence that, as I have already remarked, there are actually ten Mahomedan witnesses in favour of simultaneous examinations against four who object to them; two are neutral. Thus, in the largest province in the Empire, where nearly half the Mahomedans in British India are located, there are twice as many Mahomedan witnesses in favour than there are against! This circumstance robs the following sentence from the Report of much of its value:—"Under the second [*i.e.*, "'evidence' given by others who feel that, in the present "'circumstances of the country, important classes of "'the community are practically debarred from success "'in examinations designed mainly as tests of educa-"'tional fitness'] may be included the majority of the "witnesses belonging to the Mahomedan community." (Paragraph 60 of Commissioners' Report.) The statement is technically correct, but in its essentials is strangely misleading. As I shall shortly have occasion to show, the evidence of Mahomedan witnesses was taken in a manner which causes grave suspicion as to perfect fairness. For example, fifteen Mahomedan gentlemen were considered sufficient to express the opinions and views of twenty-three millions of Bengal Mahomedans: fifteen (the same number) were thought necessary to perform a similar duty for six millions in the Panjab, while sixteen were called in the North-Western Provinces, where there are less than twelve millions of Moslems.* Fairly dealt with, and all the considerations taken into account, the utterance of the Commissioners respecting Mahomedan evidence which I have quoted is scarcely fair, inasmuch as it deals with a set of facts differing in important particulars, in each Presidency or Province. The mere enumeration of figures in such a case would be gravely misleading. Yet this is what the Commission appears to have done.

239. The tables in regard to the other Presidencies and Provinces I give without comment. The details, however, are at your lordship's service should they be desired. Those details are omitted solely from a wish not to make this communication too long. An examination of them shows me that what I have said of Bengal might be said of the other parts of the Empire.

247. The summary shews, as might have been expected, a decided preponderance of opinion among European Covenanted Civilians and Special Officers against simultaneous examinations. The numbers are 18 for, 55 against, or three to one against. It is surprising, all things considered, there should have been so many Europeans in favour of a proposal which, while it will do nothing to weaken but much to strengthen the connection of India with England, will certainly, when carried out, lessen the number of Europeans employed in India. When the examination of these tables is further proceeded with, and the Uncovenanted and non-official Europeans* are taken into account, the great disparity of numbers largely passes away. While there is still a majority of Europeans against it, it is comparatively small; the numbers are nearly equal, being 31 for, 37 against. When these numbers are set opposite to those of Indians on both sides, the result is, I venture to submit, overwhelming in its significance.

248. FOR OR AGAINST SIMULTANEOUS EXAMINATIONS.

249. Thus, while of European witnesses there are considerably less than two to one against, of Indians, including the disproportionate "cloud of witnesses" of the Mahomedan faith introduced in Madras, the North-West Provinces, and the Panjab, there are more than four to one for. From the tables given in para. 217 it will be seen that there is not a part of the Empire in which the majority of witnesses, European and Indian counted together, were not in favour of simultaneous examinations. It should not be forgotten that four-fifths of the witnesses examined were summoned as being persons whose opinions were of special value. Here it may be well to set out the names of the Europeans who gave evidence in favour. They are as follows:—

251. The record of evidence according to Nationality shows that Europeans and Mahomedans are in a majority, adverse, the proportions curiously being nearly the same—in both cases less than two to one against. The Hindus were ten to one in favour, the Parsees five to one. Such an expression of race opinion should, I submit, have been ascertained by the Commission, should have been mentioned in the Report, and due weight should have been given to it in the recommendations made. There are one hundred and fifty millions of Hindus in British India: representatives of the various Hindu races by ten to one are in favour of a particular course; there are fifty millions of Mahomedans, less than two are against this particular course to one in favour. All are Indians, all are Indian subjects of the Queen-Empress. They work cordially together in the every-day affairs of the Empire. They are good neighbours. Their numbers ought to be counted together. In the United Kingdom Scottish votes are not separated from English votes. Carry out this fair principle in the present instance, and it will be found the Indian votes are four to one in favour. Nevertheless, the Commission—whose Report, of course, should be according to the evidence [otherwise, why trouble about taking evidence?], makes recommendations in a contrary sense, declaring there was no consensus of opinion. A Report built upon such shifting sand cannot possibly stand.

252. Among those, in the above enumeration, designated Neutral or Doubtful, it is only fair to the cause I am urging that I should state, are some who make suggestions which, if acted upon, would find place in the Covenanted Service for a large proportion of Indians. For example:—

253. Mr. Larminie, Commissioner, Dacca Division, "Some posts should be reserved exclusively for Europeans—the rest for Indians";

Mr. Elliott, Public Prosecutor, Cuddapah, would give one-fourth of appointments to Indians;

Hon. M. Melvill, C.S.I., Member of Council, Bombay, would give one-fourth of appointments to Indians;

A. Ewbank, Esq., Principal of the Patna College, proposes the Statutory Service should be enlarged and recruited by nomination followed by real examination, till it reaches a third of the Civil Service;

F. Wyer, Esq., Civil Service, Collector and Magistrate, Dacca, objects on account of practical difficulties in the examination, advocates equal apportionment of appointments on political grounds, the Indian appointments again divided according to the religions of India;

Honourable P. O'Sullivan, Barrister-at-Law, Advocate-General, Madras—"If it is found to be practicable, this [simultaneous examinations] might be done;"

W. M. Elliot, Esq., Pleader and Public Prosecutor, Cuddapah, Madras:—If an apportionment of appointments be made, he has no objection to a simultaneous examination; he would give one-fourth of the apportionment;

Rev. D. Mackenzie, M.A., D.D., Principal, Free General Assembly's Institution, Bombay, wants the service to be recruited considerably by graduates.

254. It may, further, be remarked that the majority of the objections expressed to simultaneous examinations was owing to what is called the present insufficent educational advantages in India. No attempt seems to have been made by Sir Charles Aitchison or by Sir Charles Turner (they took the lead in examining on this point) to bring out the undoubted fact that—given the examinations in India—the teaching standard would, in time, necessarily be raised to the requisite height and fulness. All the consequential benefits were likewise ignored. That advancement all along the line, in every walk of life, advancement in which the backward classes would share, must result, and every profession in India incidentally gain, were wholly ignored. Equally was it ignored that an immense impetus would be given to the provision of educational facilities by Indians themselves, the Government thereby, in a measure, being relieved of a portion of the burden of higher education. Again, when it was so frequently tacitly assumed that Indians were not fitted for high administrative and executive posts, no one asked the obvious question how this could be known or how the difficulties in the way of overcoming it, if it existed, could be conquered until a trial was made. As a matter of fact, so far as trial has been made and Indians have been appointed to positions of responsibility, it is freely acknowledged that they have satisfied all expectations, and have discharged their duties with ability and integrity. What the Duke of Argyll has called the still more important point than that of efficiency even—namely, how the pledges of the British monarch and Legislature and British Statesmen as to equality of treatment could be fulfilled—was completely ignored. No more valuable branch of inquiry than this can be imagined, if equity is to mark our rule in India. The less to Europeans of some places in the Covenanted Service is as nothing compared to our reputation for good faith. "I would sacrifice Gwalior "or any frontier of India ten times," said the Duke of Wellington in 1802, "in order to preserve our "character for scrupulous good faith." Very little, if anything, was done by the Commissioners in the putting of questions calculated to elicit favourable observations on this branch of the inquiry, while it is not going too far to say that the tendency of the examination was to elicit objections.

255. How, to some extent, this came about, and how it was that the clear and emphatic prependerance of evidence in favour of simultaneous examinations seems never to have struck the Commissioners, would be hard of understanding, were it not that the proceedings of the Commission itself afford an answer, to which answer, it is with no little regret, I now find myself compelled to ask your lordship's attention.

i 98000.

APPENDIX G.

EXTRACTS.—CORRESPONDENCE with the WAR OFFICE on the ADMISSION of INDIANS to COMMISSIONS in the BRITISH ARMY.

Cambridge Lodge, West Hill Road,
Southfields, S.W.,
28th December 1896.

SIR,

I HAVE received your letter of 21st instant. (100/Cands./1703.)

It appears from your reply that my letter of 7th August last has been misunderstood. Perhaps I have not been clear enough. I briefly recapitulate our correspondence.

I first asked to furnish me with a copy of the regulations. You kindly sent me four pamphlets. I read the pamphlets and wrote to you. After quoting the 4th section, under "General Notices," of the paper of the Civil Service Commissioners on the question of the "Nationality" of the candidates, I pointed out that I had not found the qualification of "Nationality" mentioned at all in the pamphlets, and asked whether I was right in understanding that the qualifications given under "General Notices" by the Civil Service Commissioners, applied to the Army examinations, and that they included Indians, as being born in "British dominions," and being thus natural born British subjects.

To this you replied, "that candidates for commission "in the British Army must be of pure European "descent, and are also required to be British-born or "naturalized British subjects." I thereupon naturally asked to inform me by what Act of Parliament was this limit laid down for the candidates to the exclusion of other British subjects of Her Majesty of other descent and born in Her Majesty's British dominions, such as British India and the colonies. To this you replied that "the conditions for admission to the Army are not "laid down by Act of Parliament but by regulation, "and that the regulations are to the effect already "conveyed to you."

I then asked: "I have always understood that the "only constitutional authority or power for laying "down all such conditions is Parliament, and you say "that these conditions are not laid down by Act of "Parliament. Then what other constitutional autho-"rity has the power and has laid down these condi-"tions, according to which the regulations are made. "What I want to know is the name of the constitutional "body or power by whose authority such a law is "made." You replied, "that the conditions of admis-"sion to the commissioned ranks of the Army are laid "down by regulations made by the Secretary of State "for War, under the authority of Her Majesty the "Queen, as signified by Article I. of the Royal Warrant "for the pay, appointment, promotion, and non-"effective pay of the Army."

I requested and you kindly informed me where I could get a copy of the warrant. I obtained it and then wrote my letter of 7th August last, to which your letter under acknowledgment is the reply. I pointed out in my letter that "In Article I. First appoint-"ments. I do not find a word to exclude British sub-"jects like the Indian British subjects. The candi-"dates are required to be persons duly qualified under "regulations approved by the Secretary of State." In thus pointing out that the Royal Warrant had not in any way authorised to make any regulations to exclude British Indian subjects, I further said, "Now I can-"not suppose that any such regulations can be made "constitutionally under the warrant by the Secretary "of State as would supersede any Act of Parliament, or "any proclamations of Her Majesty the Queen, but "that such regulations can only be made in accordance "with Acts of Parliament and proclamations of the "Sovereign. I desire to know whether I am right." To this the Secretary of State for War has not been pleased to give any reply in your present letter; I beg to ask it again.

For further confirmation of my view, that the Royal Warrant upon which the regulations are said to be based does not in any way authorise the exclusion of Indian subjects from becoming candidates for commissions in the Army, I cited two points from the warrant itself: (1) "about the eligibility as candidates "of graduates of some of the universities, in which no "exclusion is made for British Indian graduates of "these universities"; and (2) of "open competition." I shall deal with point (1) further on when I shall deal with your present letter. On point (2) of "open competition" laid down in the Queen's Warrant itself, the Secretary of State has not been pleased to give any explanation. I beg for it again. After expressing my views that the warrant gave no authority to exclude Indians, I endeavoured to show that it stood to reason that the Queen's Warrant could not and would not make any such exclusion. I cited the solemn pledges and actions of both Her Majesty and Parliament, and said that "it was impossible to believe that Her Majesty's "Warrant could have had the least intention of stulti-"fying and superseding Acts of Parliament and "falsifying Her Majesty's own great proclamations so "seriously made to the world on two great and histori-"cal occasions." To this there is no reply, and I beg again the Secretary of State's attention to this part of my letter of 7th August last, and to explain how and by whom could such Acts and proclamations be superseded and disregarded.

In your letter under reply, you say, "It has been "decided that pure European descent is an essential "qualification." But you do not say *who* has so decided. Parliament has not so decided, Her Majesty has not so decided. Who is this mysterious great potentate, superior to the Queen, and superior to Parliament who had the authority to decide contrary to the express desire and decisions of the Queen, the Parliament, and the British people represented by them?

You further say, "that in the Regulations which "govern the admission of candidates to the Army, it "is clearly laid down that only such candidates as "are considered in all respects suitable to hold a "commission in the Army are eligible."

First of all, the Regulations have no authority to exclude the Indians as I have already explained. Next, even according to your extract, it does not at all follow that the British Indians are excluded. If any of them offer to show themselves and can show themselves "in all respects suitable to hold a commission" by submitting themselves to all the tests and conditions which are required from candidates, they are also eligible. What then had any one the right to exclude Indians altogether, contrary to the authoritative decisions of Her Majesty and Parliament? Can any man in his senses believe that out of 225,000,000 of British Indians you will not get a few thousands who are "in all respects suitable to hold a commission in the Army," if fair and honest trial is allowed to them as candidates? Parliament does not believe so—Her Majesty does not believe so.

Referring to the second paragraph of your present letter, I never said anything of "obliging the military "authorities to grant commission in the Army to "anyone not considered suitable." My question is not for the "unsuitable" graduates but for those who offer to prove themselves to be "suitable" under the *same* conditions as are required from any other candidates. The Royal Warrant does not exclude any section of the graduates of the specified universities. Unauthorised Regulations are of no force.

My last inquiry in my letter of 7th August last has also not been replied to. How is it that a Turk, or a Russian, or any of European descent can by mere naturalisation become a candidate; and a British Indian subject, born in Her Majesty's own dominions, and, to whom equality is pledged in every honourable and binding manner should be excluded?

I fully trust that the Secretary of State would be good enough to reply to all my inquiries.

The only authoritative rational explanations I have met with are:—

1. Lord Salisbury's direct and significant words "India must be bled—and that all talk of "pledges, equality, &c. was political hypocrisy."
2. Lord Lytton has explicitly said with regard to the actions of the authorities that they were "so many deliberate and transparent subterfuges

" for stultifying the Act and reducing it to a " dead letter." He further says, "I do not " hesitate to say that both the Governments of " England and India appear to me up to the " present moment unable to answer satisfactorily " the charge of having taken every means in " their power of breaking to the heart the words " of promise they had uttered to the ear."

3. A committee of five Members of the Council of the India Office, declared as far back as 1860 that the British were exposed to the charge of "keeping " promise to the ear and breaking it to the " hope."

I respectfully ask whether the action of the War Office making arbitrary and unauthorised Regulations to exclude the British Indians from the commissions in the Army falls under the above explanations or whether there is any other satisfactory explanation.

I once more sincerely trust that the Secretary of State will be pleased to reply to all my questions.

I remain, &c.

DADABHAI NAOROJI.

The Under Secretary of State,
War Office, London, S.W.

100/Cands./1745.

War Office, London, S.W.,
25th January 1897.

SIR,

I AM directed to acknowledge the receipt of your letter of the 28th ultimo, and to express the regret of the Secretary of State for War that my letter of the 21st idem did not impart to you the full information it was intended to convey.

In reference to the doubts which you apparently entertain as to the authority under which the regulations for admission to the Army are made, I am to call your attention to the preamble of the " Royal Warrant for Pay, Promotion, &c." from which you will learn that such Warrant has the express sanction of Her Majesty the Queen, and that the Secretary of State for War is appointed by Her Majesty to be "the sole administrator and interpreter" thereof, and "em- " powered to issue such detailed instructions in refe- " rence thereto as he may from time to time deem " necessary."

The detailed instructions governing the grant of commissions in the Army are made by the Secretary of State under the above authority, and are, as you are already aware, to be found in paragraph 1 of the Regulations for admission to the Royal Military College, Sandhurst, and to the Royal Military Academy, Woolwich, when read in conjunction with Appendix 1 to those Regulations.

I am, &c.

ARTHUR HALIBURTON.

D. Naoroji, Esq.

Cambridge Lodge,
West Hill Road, Southfields, S.W.
26th January 1897.

SIR,

I HAVE received your letter of 25th inst. (No. 100/Cands./1745.)

I am sorry to trouble the Secretary of State again because my inquiry remains just as much unanswered as before. In my letter of 7th August last, my very first question is this :—

"I cannot suppose that any such regulations can be made constitutionally under the Warrant by the Secretary of State, as would supersede any Act of Parliament or any proclamations of Her Majesty the Queen ; but that such regulations, can only be made in accordance with Acts of Parliament and proclamations of the Sovereign. I desire to know whether I am right."

To this question I have yet received no reply. If I am right, then the Secretary of State has no right or powers to exercise such absolute power as he claims in your present letter. No executive officer has any despotic powers to make any regulations which can at all contravene any Act of Parliament or proclamation of the Queen sanctioned by Parliament. I therefore submit that the Secretary of State has no power or authority whatever to exclude British Indian subjects.

The Secretary of State by claiming such powers as your letter assumes, exposes Her Majesty and Parliament to the charge of un-English hypocrisy, *i.e.*, that Her Majesty on the one hand proclaims to the world repeatedly that British Indian subjects are exactly like the British subjects, and on the other hand stultifies and breaks her own pledges by giving to the Secretary of State authority to disregard Her proclamations. The same charge will apply to Parliament for allowing such a thing. I anticipated this in my letter of 7th August last, when I said, after citing the Acts and Proclamations :—

"That our Gracious Sovereign and the British People, whose voice and desires she represents, could have been anything but sincere in her proclamations cannot be admitted for a moment, and it is impossible to believe that Her Majesty's Warrant could have had the least intention of stultifying and superseding Acts of Parliament and falsifying Her Majesty's own great proclamations, so seriously made before the world on two great and historical occasions."

The fact is that the Warrant gives no such power or authority to make any regulations contrary to Acts or proclamations. Every power given to any executive officer is subordinate to and restricted by Acts of Parliament and proclamations of the Queen, unless the Secretary of State means to attribute to Her Majesty and Parliament mean political hypocrisy. I therefore ask again, my very first question in my letter of 7th August last, which I have quoted above, and in this letter I restrict myself to that question.

I am, &c.

DADABHAI NAOROJI.

The Under Secretary of State,
War Office, London, S.W.

Washington House,
72, Anerley Park, London, S.E.,
January 16, 1900.

SIR,

REFERRING to your letter of 10th June 1896, in which you inform me that "Candidates for commis- " sions in the British Army must be of pure European " descent, and are also required to be British-born or " naturalised British subjects." I have to request you to kindly inform me whether any alteration has been made in the rule above cited ; if so, kindly inform what it is.

Yours obediently,

DADABHAI NAOROJI.

The Under Secretary of State,
War Office, Pall Mall, S.W.

No. 100/Candidates/2097. War Office, London, S.W.,
January 23, 1900.

SIR,

I AM directed by the Secretary of State for War to acknowledge the receipt of your letter of the 16th instant, and to acquaint you in reply that no change has been made in the regulations which require that candidates for commissions in the British Army must be of pure European descent, and must also be British-born or naturalised British subjects.

I have, &c.

T. FLEETWOOD WILSON.

Dadabhai Naoroji, Esq.,
Washington House,
72, Anerley Park, S.E.

APPENDIX H.

EXTRACTS.—CORRESPONDENCE WITH THE ADMIRALTY ON THE ADMISSION OF INDIANS TO COMMISSIONS IN THE ROYAL NAVY.

Cambridge Lodge,
West Hill Road, Southfields, S.W.,
28th August 1896.

SIR,

I HAVE received your letter of 24th inst.

I shall not at present say anything about the academical discussion. Nor is the present correspondence fit to discuss the important question of the exaction of 100,000*l.* from India without any voice of the Indians. Small or large amount *is* not material. Whether India is partner or slave in the Empire—that is the question. But that discussion must rest at present. I had mentioned this simply as an illustrative incident about the belief in India that the British Indians were absolutely excluded, on account of their nationality, no matter however qualified they may be. And after all your present letter shows that the belief was well founded.

In your first letter of 13th inst. you directed my attention to the fact that no application had been made by an Indian. Then you pointed out (if such an application were made) that you would follow the practice of your predecessors, and with the unlimited right which you possessed to exercise an unfettered choice, you would select such boys among *the whole* of the applicants as seemed most likely to you from their antecedents, their surroundings, their physical attributes, and other considerations to secure the most efficient officers with the greatest prospect of being successful in leading and governing British seamen. You did not say what the practice of your predecessors was. You said only what you would do. You stated the qualifications about the *whole* of the applicants, but not a word about entire disqualification of Indians on account of their nationality alone, though this reply was to my questions, which were distinctly directed, as follows, to that particular point of "nationality."

First, in my letter of 14th June last, I asked: "I do "not find this qualification of 'nationality' mentioned "in the papers you have been good enough to send "me. You will oblige me much by informing me "whether I am right in understanding that the "qualifications given under 'General Notices' by the "Civil Service Commissioners apply to the examina- "tions for the navy, and that, therefore, Indians of "British India are included as being born in British "Dominions and being thus natural-born British "subjects." The qualification especially referred to by me was clearly mentioned to be that of "nationality."

To this my first inquiry you did not favour me with a direct reply.

Second, in my letter of 8th instant, I again as pointedly made my inquiry as follows: "I shall, "therefore, be much obliged by informing me that "the cadetships in the Navy are as open to British "Indian subjects as they are to all other British "subjects of Her Majesty."

In your reply of 13th inst. to this inquiry, there was not a word said that Indians were positively excluded as Indians. On the contrary, as I have stated above, you laid all stress upon qualifications for fitness. If Indians were disqualified by their "nationality," the reply of 13th inst. had no meaning as laying stress upon qualifications of fitness, unlimited right of selection, unfettered choice, &c., &c.

Your present letter of 24th inst. is again as puzzling. You say that "no one has a right to a 'nomination.'" I did not ask or claim any such right, any more than any other British subject had.

You say "the selection of candidates rests entirely "with the First Lord of the Admiralty." But really this must be certainly on some definite principles, and founded upon and ordered by some constitutional authority (which has not been pointed out in your letter), and not on the mere absolute whim or the despotic will of the First Lord, as if he were an Oriental despot. But what is still stranger is, that if an Indian is excluded because he is an Indian, and if the First Lord has positively determined not to consider any Indian application, what was the good of telling the Indian that he would consider the *whole* of the applicants. You say, "I further explained how "my choice would be guided by my wish to secure "officers who would be best qualified to govern, "British seamen." This shows that it was certain qualifications you wanted in each individual applicant, and not a decided exclusion of an Indian if he possessed the qualifications. But if you left yourself no choice, and would give no consideration to an Indian applicant, what was the good of telling him about how your choice was to be guided.

You say, "I frankly say that I was under the im- "pression that the words I used would lead you to "infer that preference would be given to those of "British parentage." "Preference" would mean that if there were an Indian and a British applicant of equal merits, "preference" would be given to the British. But even of the "preference" of British parentage there was no clear indication in your letter of 13th inst. But even supposing that such an inference was possible, then if the Indian was wholly and absolutely excluded as an Indian, "preference" is only an idle word, and means nothing.

Thus you will see that the matter is still left vague in your present letter of 24th inst.

I again put the question directly.

Is the Indian to be excluded on the ground of his nationality, or not? It is desirable that such a vital matter to above two hundreds of millions of British subjects should not rest on mere misleading and vague "drifts," "inferences," or "impressions," but must be clear in statement.

In the last sentence of your letter where there is something like a clear statement, though under cover, the matter is still left vague. You say "generally "speaking the Regulations of the Navy in respect of "the parentage of those who are to be admitted to the "various ranks approximate to those of the Army and "have been in force for many years." A wrong does not become a right by being enforced.

However, you have not favoured me as to what these regulations of the Army are, and your words "*generally* speaking" and "approximate" still leave a certain vagueness, as if the regulations of the Army and Navy were not quite alike.

I have a reply from the War Office. That reply, however unconstitutional, and unauthorised, un-British and dishonourable to solemn pledges it appears to me, is at least direct and clear, and not left to mere impressions or inferences. This reply is "that candidates for Commissions in the British "Army must be of pure European descent, and are "also required to be British-born or naturalized "British subjects."

Now I request you kindly to inform me whether in the Navy also there is exactly as above the same absolute and complete exclusion of British Indians as in the Army, so that the matter may be dealt with in its true character. If the exclusion in the Navy is exactly like that in the Army, then all that is said about "preference," "qualification," "exercise of unlimited right of selection," "fitness," "no applications had been received from Indians," and leaving matters to "drifts," "impressions," and "inferences," would appear to me mere excuse and of no good or use.

Kindly make the matter clear, whatever it may be.

I am informed that there were, or are, some Japanese in the Navy. I do not know whether this is true. If it is so, I would be obliged to be informed what their position was or is.

I remain, &c.
DADABHAI NAOROJI.

Right Hon. G. J. Goschen,
First Lord of the Admiralty,
Whitehall, S.W.

Cambridge Lodge,
West Hill Road,
Southfields, S.W.,
SIR, 5th December 1896.

I HAVE addressed a letter to you on the 28th August last.

I shall fell obliged for reply to it.

I remain, &c.
DADABHAI NAOROJI.

Right Hon. G. J. Goschen,
First Lord of the Admiralty,
Whitehall, S.W.

Admiralty, Whitehall,
SIR, 8th December 1896.

IN reply to your letter of the 28th August, allow me to say, in all courtesy, that you seem to me to be endeavouring to create a grievance, while none, to my knowledge, has existed hitherto, by your efforts to draw from me an unnecessary declaration.

I have nothing to add to my previous letters, which appear to me to be perfectly intelligible to anyone who wishes to understand them, beyond pointing out to you, in reply to one of your questions, that the regulations which govern admission to various branches in the Navy and Army are accessible to the public, and will furnish you with the means of testing the statements I made to you with regard to them.

I regret that I cannot undertake to continue this correspondence.

I am, &c.
GEORGE J. GOSCHEN.

Cambridge Lodge,
West Hill Road, Southfields, S.W.,
SIR, 10th December 1896.

I HAVE received your letter of the 8th instant, and I am very sorry I am forced to trouble you again. I am not going into any argument upon your letter, but there seems to me some misunderstanding, and I shall feel much obliged by its being cleared up by you. The question is simply this, and to which the War Office has given a direct reply. Is the Navy open to British Indian subjects, as it is open to the inhabitants of the United Kingdom, or is it not—the regulations being the same for all?

The reason for a reply is two fold. The Indians then will know whether they should apply or not at all. Secondly, it is necessary for me that, as a witness before the Royal Commission on Indian Expenditure, I should reply with correct knowledge of facts.

There are other points of great importance connected with the Navy in its relations with India, but I should not trouble you at present with these.

I remain, &c.
Right Hon. G. J. Goschen, DADABHAI NAOROJI.
First Lord of the Admiralty,
Whitehall.

Admiralty, Whitehall,
SIR, 15th December 1896.

MR. GOSCHEN desires me to acknowledge the receipt of your letter of the 10th instant, and in reply to point out that your original questions related to the admission of Indian subjects as commission officers in Her Majesty's Navy, and Mr. Goschen's answers have been directed to that point.

You now ask generally whether the Navy is open to British Indian subjects, as it is open to the inhabitants of the United Kingdom. To this his answer is in the negative.

I remain, &c.
Dadabhai Naoroji, Esq. W. GRAHAM GREENE.

Cambridge Lodge,
West Hill Road, Southfields, S.W.,
SIR, 16th December 1896.

I AM very much obliged for your direct reply in the "negative," to my question in yesterday's letter. But I am sorry to find that you have yet left doubtful whether in your "negative" the question of "the "admission of Indian subjects as commission officers "in Her Majesty's Navy" is included. I shall be thankful to have this cleared up, as the War Office has done. You are aware that the chief object of my inquiry was about the admission of Indian subjects as commissioned officers in Her Majesty's Navy.

I remain, &c.
Right Hon. G. J. Goschen, DADABHAI NAOROJI.
First Lord of the Admiralty,
Whitehall.

Admiralty, Whitehall,
SIR, 18th December 1896.

MR. GOSCHEN having informed you in his letter of the 8th December that he could not undertake to continue the correspondence on the subject of the admission of Indian subjects as commissioned officers in Her Majesty's Navy, only consented to reply to your letter of the 10th December, inasmuch as your further inquiry was directed to the Navy as a whole.

Having answered this question, Mr. Goschen must again decline to renew the correspondence on a subject which he considers to have been definitely closed.

I remain, &c.
Dadabhai Naoroji, Esq. W. GRAHAM GREENE.

Cambridge Lodge,
West Hill Road, Southfields, S.W.,
SIR, 19th December 1896.

I HAVE received your letter of yesterday that our correspondence on the subject of the fact of the admission of Indian subjects as commissioned officers in Her Majesty's Navy is definitely closed.

Now, that hereafter you may not blame me again as you have done before about the interpretations of your impressions, inferences, &c., it is necessary for me, as I have no doubt you yourself in justice will admit, to state unambiguously what I understand as the end of our correspondence. The end is that every British Indian subject, on account of his nationality, is entirely excluded and disqualified to be admitted as commissioned officer in Her Majesty's Navy.

This point being ended, I have now to ask your considerate attention to my letter of 8th August last.

In the last paragraph of that letter I have said: "I "shall therefore be much obliged by informing me "that the cadetships in the Navy are as open to "British Indian subjects as they are to all other "British subjects of Her Majesty."

To this part of my inquiry you have now closed the correspondence, as stated above, *i.e.*, in the "negative."

There remains now the second part of my inquiry. And for which I crave your reply. I said next in the same paragraph:

"If not, I shall be thankful for an explanation for the exclusion of British Indian subjects, contrary to Acts of Parliament, confirmed and proclaimed by two great proclamations of Her Majesty the Queen."

I shall feel very much obliged indeed for a clear explanation of this second new question.

I remain, &c.
Right Hon. G. J. Goschen, DADABHAI NAOROJI.
First Lord of the Admiralty,
Whitehall.

APPENDIX I.

TABLE, &c. SHOWING EXPENDITURE ON WARS BEYOND THE INDIAN FRONTIERS.

(*Extracted from Colonel Hanna's "Backwards and Forwards."*)

STATEMENT showing APPROXIMATE COST of the FORWARD POLICY on the NORTH-WEST FRONTIER up to 1896, including the AFGHAN WAR of 1878–79–80.

	Rupees.	
I.—The Afghan War	223,110,000*	Sir Evelyn Baring, Financial Member of the Viceroy's Council.
II.—Military Railways on the North-West Frontier since the War.	163,967,910†	Administrative Reports on Railways in India.
III.—Beluchistan Agency since the War. Government Allotment, Rs. 865,600 per annum, for sixteen years.	13,849,600	*Moral and Material Progress of India*, 1893–94, p. 157.
IV.—Special Grants to Beluchistan Agency—		Financial Statements—
Reservoir in Pishin — Rs. 261,240		1889–90, p. 15, par. 31.
Quetta Water Works — 499,000	1,134,240	1891–92, p. 23, par. 16.
Buildings at Quetta — 374,000		1892–93, p. 32, par. 84.
V.—Lease of Quetta District, and subsidy in lieu of right to collect tolls in the Bolan Pass since 1883.	715,000	*Progress and Condition of India*, 1891–92, p. 15.
VI.—Preparations for War with Russia in 1885	22,880,710	Official Estimate. Return, dated India Office, 8th June 1894.
VII.—Special Defence Works on Frontier and Rawal Pindi.	30,000,000‡	Approximate.
VIII.—Military Roads on North-West Frontier; expended principally on the Dera Ghazi Khan and Pishin road.	2,000,000§	Financial Statement—1888–89, p. 10.
IX.—Afghan Boundary Commissions	1,700,000	Financial Statements—1885–86, p. 22, par. 52; 1894–95, p. 27, par. 118.
X.—Permanent Increase of Indian Army in 1885–6—		
A. 10,753 British Troops — Rs. 95,809,200		
B. 19,220 Native Troops — 65,924,600	162,286,800	Official Estimate. Return, dated India Office, 8th June 1894.
C. Deferred Pay of above British Troops. — 553,000		
XI.—Increase in the Native Pension Establishment, due to the Afghan War, Waziri and Chitral Campaigns, and other Expeditions on North-West Frontier.	18,591,300	Approximate.
XII.—Cost to Government of Imperial Service Troops	1,400,000	*Progress and Condition of India*, 1894–95, p. 169.
XIII.—Re-establishment and Maintenance of British Agency at Gilgit—		
A. For three years, at the rate of Rs. 50,000 a year. — Rs. 150,000		*Blue Book, Chitral*, p. 20.
B. For four years, at the rate of Rs. 200,000 a year. — 800,000		Financial Statements—
C. Special Grant — 90,000	3,005,500	1893–94, p. 7, par. 11.
D. „ — 481,500		1894–95, p. 21, par. 83.
E. Transport — 784,000		1893–94, p. 7, par. 11.
F. „ — 300,000		1893–94, p. 13, par. 24.
G. „ — 400,000		1894–95, p. 28, par. 121.
XIV.—Re-occupation of the Kuram Valley in 1892–93, at Rs. 450,000 per annum, for three years.	1,350,000	Financial Statement—1893–94, p. 7, par. 11.
XV.—Grants for so-called Mobilisation—		Financial Statements—
A. 1889 — Rs. 2,035,000		1889–90, p. 24, par. 57.
B. 1890 — 600,000		1890–91, p. 8, par. 12.
C. 1891 — 2,134,000	5,385,000‖	1892–93, p. 8, par. 13.
D. 1892 — 616,000		1892–93, p. 32, par. 84.
XVI.—Additional Transport Animals, Re-mounts, and Mules—		Financial Statements—
A. 1891 — Rs. 1,321,000		1892–93, p. 8, par. 13.
B. 1893 — 267,000	1,825,000¶	1894–95, p. 6, par. 9.
C. 1894 — 237,000		1894–95, p. 28, par. 121.
XVII.—Rise in price of food, forage, and increase of number of animals to be fed—		Financial Statements—
A. 1889 — Rs. 795,000		1889–90, p. 24, par. 57.
B. 1892 — 1,500,000		1893–94, p. 7, par. 11.
C. 1893 — 700,000	3,485,000	1893–94, p. 27, par. 63.
D. 1894 — 490,000		1894–95, p. 28, par. 121.
XVIII.—Expeditions on North-West Frontier since 1888–89.	5,075,680	Official Estimate. Return, dated, India Office, 8th June 1894.
XIX.—Minor operations (not scheduled) since 1884–85	3,239,100	Official Estimate.
XX.—Waziri Campaign, including cost of Delimitation Commission, Fortified Post and Tochi Cantonments.	3,824,000	Financial Statements— 1895–96, p. 15, par. 50, and p. 56, par. 200. 1896–97, p. 34, par. 132.
Carried forward		

* Five millions sterling were contributed by the English Exchequer to the War Expenses.

† Provision is made in the Budget Estimate for 1896–97, for a further sum of Rs. 4,954,000 to be expended on these useless railways.

‡ "A large sum has been spent on defences and military establishments at Quetta, including an advanced position covering the place, strategic roads, and defences for various bridges, tunnels, &c., on the Sind-Pishin Railway. . . . An entrenched position has been formed at Rawal Pindi, and a defensive post at Multan."—"Indian Finance Statement for 1896–97."

§ This sum only represents a small portion of the money expended on military roads in Beluchistan and other places beyond the Indus, as large sums are annually disbursed by both the military and civil departments in building new roads and maintaining the old ones.

‖ Provision is made in the Budget Estimate for 1896–97, for Rs. 4,949,000, "for preparations for mobilisation of the Field Army."

¶ The maintenance of the Transport Branch of the Commissariat Department cost, in 1893–94, no less than Rs. 3,403,140; yet, in the following year, it broke down when called upon to provide carriage for the Division of 15,000 men mobilised for the relief of Chitral.

		Rupees.	
Brought forward - - - -			
XXI.—Chitral Campaign, including occupation of Chitral during past and present year.		21,500,000	Financial Statement—1896-97, p. 7, par. 11, and footnote.
XXII.—Khyber Rifles raised after the War - -		1,398,240	*Progress and Condition of India*, 1891-92, p. 17.
XXIII.—Subsidies—			
A. Amir of Afghanistan since the War - -	Rs. 21,000,000		13 years at 12 lakhs, 3 at 18 lakhs.
B. Khyberies Afghanistan since the War -	1,400,640		*Progress and Condition of India*, 1891-92, p. 17.
C. Ruler of Chitral and his brothers - - -	60,000	22,857,400	*Chitral Blue Book*, pp. 9 and 13.
D. Gomal Chiefs since 1890. - - -	296,760		*Progress and Condition of India*, 1891-92, p. 17.
E. Other small Chiefs on North-West Frontier	100,000		*Progress and Condition of India*, 1891-92, pp. 16 and 18.
Total Rupees - - -		714,580,480	

Cost of the Forward Policy.

(Extract from Colonel Hanna's "Backwards and Forwards," Chap. III.)

1. The above table contains the official confession of the cost of the Forward Policy to the people of India, a confession that is very far from telling the whole tale of cruel exactions and dangerous waste which is the true history of that policy.

2. Take, for instance, the first item in that table, the cost of the Afghan War—Rs. 223,110,000—and see how it expands in the light of Major Evelyn Baring's admission, in his Financial Statement of the year 1882-83, that "it cannot be doubted that a great deal of the "expenditure debited to the ordinary (military) "account really belongs to the war," and that money spent "by reason of it"—the war—"was set down "among civil charges." In proof of this latter assertion he adduced the fact that the Punjab Northern State Railway, the construction of which had to be hurried on for the purpose of moving up troops and supplies, cost, on that account, considerably more than it otherwise would have done, and yet not a rupee of this enhanced price was debited to war expenditure;* but he made no mention of the large sums spent, during the three years the war lasted, by the political officers in buying the services or the neutrality of the tribesmen, either individually or collectively, along the three lines of advance, not yet of the cost of those political officers themselves, taken from their Indian appointments, yet still drawing their pay from the Civil List, though both these forms of expenditure were due to the war.

3. There is nothing to surprise us in these deceptive classifications: they are the natural outcome of the desire to minimise the cost of a policy which runs counter to the wishes and interests of the people who have to pay for it; and they are as common as they are natural, vitiating the official figures for all the frontier exhibitions and minor operations, just as much as they falsify those of the Afghan War. One proof of this, but that a very glaring one, must suffice.

4. During a period of ten years—from 1885 to 1895—great activity prevailed all along our frontier, from Quetta to Gilgit, from Sikkim to Burma, the expeditions and operations on its north-west section alone admittedly absorbing Rs. 52,569,500. In reality they cost considerably more.

5. In the Financial Statement for the year 1888-89, Rs. 2,035,000 were set down to mobilization—an entirely new item of expenditure—which was thus explained and defended by Sir David Barbour, then the Financial Member of Council: "The Rs. 2,035,000 "on account of mobilization is intended to meet the "cost of purchasing transport animals, provisions, "and equipment, so that, in case of need, an army "corps may be in a position to take the field promptly. "This is one of those precautions which, in the present "day of scientific warfare cannot be neglected. *The "greater portion of the cost will be incurred once and "for all, and will not recur.*"† The Rs. 2,035,000 proved insufficient for the purpose in view, and the Financial Statement for 1890-91 contained a further provision of Rs. 600,000, "to complete the arrangements "and preparations to facilitate mobilization."

6. To people of my views, the need of providing for the mobilization of an army corps, *for service across the frontier*, was not apparent; but we derived a certain amount of comfort from the assurance that the process, unnecessary as we thought it, and expensive as it certainly was, had been completed, and we noted with satisfaction the absence of the word *mobilization* from the Financial Statement for the year 1891-92. All the greater, therefore, were our disappointment and astonishment when, in the course of the same year, a revised estimate was made public, in which besides Rs. 800,000 "sanctioned during the year for additional "transport mules," and Rs. 521,000 "for remounts "and ordnance mules,"* Rs. 2,134,000 were set down as "*Expenditure in India in preparations to facilitate "mobilization;*" whilst the Financial Statement for 1892-93 placed Rs. 616,000 to the account of "*Measures "intended to facilitate the speedy mobilization of the "army.*"

7. Now, if Rs. 2,635,000 was an adequate provision for the mobilization of an army corps—there was never any talk of mobilizing two—what became of the transport, provisions, and equipment bought with that money? There can be but one answer to the question—it had all disappeared, used up in frontier expeditions and minor operations; and so far as transport is concerned, we have the clearest proof that the Rs. 2,750,000 nominally devoted to mobilization in 1891-92, and 1892-93, went the same way, for when in the spring of 1895 a single division—minus the greater part of its cavalry and its horse and field artillery—was ordered on active service, it was found that there were only 7,482 Government mules available, and the military authorities, after buying or hiring every baggage animal that they could lay hands on, were reduced to the necessity of borrowing the transport service of the Jaipur and Gwalior Imperial Service Troops, and depriving a number of our own regiments of their regimental baggage ponies.†

8. In the current year Rs. 4,949,000 have again been devoted to the mobilization of a field army, and Sir James Westland has promised the Indian taxpayers that Rs. 4,348,000 of that amount "*will be non-recurring, initial expenditure.*" Can he, I wonder, ever have read his predecessor's similar assurance? The sum is large, nevertheless it is absolutely certain that if, in the course of the next two or three years, India should become involved in "scientific warfare," she would find herself utterly destitute of the means of prosecuting it, unless indeed her Government had meanwhile put a stop to the expeditions and operations which are perpetually frittering away her resources of

* Indian Financial Statement for 1882-83.
† Indian Financial Statement, 1889-90, page 24, par. 57.

* See Table of Costs, XVI. A, 1891, Rs. 1,321,000 (Rs. 800,000 + 521,000).
† Sir Henry Brackenbury, Military Member of the Viceroy's Council, in his remarks on the military expenditure in 1895-96, mentions that "no less than 40,000 transport animals were employed with the Chitral "Relief force." As regards camels, he said: "We were dependent "entirely upon hired camels, or upon camels purchased expressly for "the campaign. . . . But the number which could be hired was "extremely small, and at the very outset the Government was obliged "to have recourse to purchase. . . . *The camels purchased by "Government have for the most part so broken down in health that "it has been found impracticable to retain any but a very small "number of them for future use.*"

all kinds, but more especially her supply of transport cattle.

9. It is worth noting that this habit of concealing the true cost of past expeditions and operations is closely allied to that tendency to under-estimate the probable expense of each new phase of the expansion fever, to which we owe the most stupendous financial blunder on record—the estimating of the total net cost of the Afghan War at £5,752,000 in February, 1880, and the revision of that estimate in June of the same year by rather more than £9,000,000! The £15,000,000 at which the cost of the war was then placed, rose in October to £15,777,000, and when the accounts were made up at the close of the financial year—March, 1881—this sum was found to have fallen short of the monies already expended by £828,000, whilst war expenditure still showed no sign of coming to an end!*

10. The story is so old a one that there has been time for most of us to forget it, but we all know that it has repeated itself in still more startling form, though on a smaller scale, *à propos* of that campaign which so unpleasantly laid bare the deficiencies of Indian transport arrangements, and the untrustworthiness of Indian Budgets.

11. The first estimate for the Chitral Expedition amounted only to Rs. 1,500,000; the sum actually spent upon it, to Rs. 17,647,000, or nearly twelve times more than that estimate; whilst, according to Sir James Westland, "it has left us a legacy of per-
"manent expenditure in the occupation of Chitral
"and of its communications, which has involved in
"1895–96 an expenditure of Rs. 1,022,000, and will
"involve in 1896–97 an expenditure of Rs. 2,317,000
". . . . irrespective of the Political Expenditure,
"which comes to Rs. 200,000 in 1895–96 and Rs.
"220,000 in 1896–97; . . . , also of Military Works
"Expenditure, Rs. 216,000 in 1896–97."*

(*b.*) Non-effective charges:—(1.) Pensions to officers of the British Army. (2.) Pensions to Non-commissioned officers and soldiers of British Army - - - - 109
(*c.*) Chelsea and Kilmainham Hospitals - - - - - - - - 110
(*d.*) Payment for Indian troops employed out of India - - - - - - - 111

3. Naval charges - - - - - - - - - - 114

II.—Settlement of administrative charges - - - - - - - - - 119

III.—Question of liberal treatment - - - - - - - - - 120

CHAPTER IV.—SUMMARY OF REPORT - - - - 128

RESERVATIONS BY LORD WELBY, SIR R. KNOX, AND MR. RYDER, BY SIR J. PEILE, BY SIR A. SCOBLE AND SIR R. MOWBRAY, BY MR. BUCHANAN, AND BY SIR R. KNOX - - - - - - - - - - 143

SEPARATE REPORT BY SIR W. WEDDERBURN, MR. CAINE, AND MR. NAOROJI - 151

TERMS OF REFERENCE.

To inquire into the Administration and Management of the Military and Civil Expenditure incurred under the authority of the Secretary of State for India in Council, or of the Government of India, and the apportionment of charge between the Governments of the United Kingdom and of India for purposes in which both are interested.

LIST OF MEMBERS OF THE COMMISSION.

Commissioners appointed by Royal Warrant dated May 24th, 1895 :—

THE LORD WELBY, Chairman.

THE RIGHT HONOURABLE LEONARD H. COURTNEY, M.P.

THE RIGHT HONOURABLE W. L. JACKSON, M.P.

THE HONOURABLE G. N. CURZON, M.P. (resigned).

SIR WILLIAM WEDDERBURN, BART., M.P.

FIELD MARSHAL SIR DONALD M. STEWART, BART., G.C.B., &c. (since deceased).

SIR E. W. HAMILTON, K.C.B.

SIR RALPH KNOX, K.C.B.

SIR JAMES PEILE, K.C.S.I.

SIR ANDREW SCOBLE, K.C.S.I., Q.C., M.P.

MR. G. L. RYDER, C.B.

MR. T. R. BUCHANAN, M.P.

MR. W. S. CAINE.

MR. DADABHAI NAOROJI.

Commissioner appointed by further Royal Warrant dated February 3rd, 1896 :—

MR. (now SIR) ROBERT G. C. MOWBRAY (BART., M.P.).

ROYAL COMMISSION ON THE ADMINISTRATION OF THE EXPENDITURE OF INDIA.

REPORT.

MAY IT PLEASE YOUR MAJESTY,

1. We, the undersigned Commissioners appointed to inquire into the administration and management of the Military and Civil Expenditure incurred under the authority of the Secretary of State for India in Council or of the Government of India, and the apportionment of charge between the Governments of the United Kingdom and India for purposes in which both are interested, humbly submit to Your Majesty this our final Report.

2. In the course of our inquiry we have profited by the knowledge and experience of the following witnesses :—

The Marquesses of Lansdowne and Ripon, and the Earl of Northbrook, late Governors-General.
Field Marshal Lord Roberts, late Commander-in-Chief in India.
Lord Cromer, Sir David Barbour, and Sir Auckland Colvin, late Financial Members of the Governor General's Council.
Lieutenant-General Sir H. Brackenbury, late Military Member of Council.
Major-General Sir E. Collen, Military Secretary to the Government of India (now Military Member of Council).
Sir O. Newmarch, Military Secretary in the India Office.
Sir H. Waterfield, Financial Secretary in the India Office.
Mr. Jacob, Comptroller and Auditor-General to the Government of India.
Sir C. Bernard, Secretary in the Revenue Department of the India Office.
Mr. Cave-Browne, Accountant-General in the India Office.
Mr. Godsell, Auditor of the Accounts of the Secretary of State for India in Council.
Colonel Wace, Inspector-General of Ordnance, Bengal.
Captain (now Rear-Admiral Sir John) Hext, late Director of the Royal Indian Marine.
Mr. Becher, Deputy Accountant-General in the Department of Public Works.
Vice-Admiral Kennedy and Mr. W. Cuming, on behalf of the Admiralty.
Field Marshal Viscount Wolseley and Sir R. Knox, on behalf of the War Office.
Mr. Cardin and Mr. Forman, on behalf of the Imperial Post Office.
Mr. Morgan Browne, late Secretary to the British Committee of the Indian National Congress.
Mr. Dadabhai Naoroji, a Member of our Commission.
Mr. Surendranath Bannerjea, a Member of the Bengal Legislative Council.
Mr. G. Subramania Iyer, Member of the Mahajana Sabha of Madras.
Mr. Gopal Krishna Gokhale, Honorary Secretary of the Deccan Sabha.
Mr. Dinshaw Edulji Wacha, Secretary to the Bombay Presidency Association; and
Dr. K. N. Bahadurji, M.D.

3. On the eve of the conclusion of our labours we have had the misfortune to lose by death one of our most valued colleagues, Field Marshal Sir Donald Martin Stewart, whose great abilities, coupled with his long experience and intimate knowledge of Indian administration, gave a peculiar value to his share in our deliberations. We believe that his views were generally in harmony with those we express in our Report.

---

4. We divided our inquiry into three sections :—

I.—The Financial Machinery of the Government of India.
II.—The Progress of Expenditure during recent years.
III.—The apportionment of Expenditure between India and the United Kingdom.

We lay before Your Majesty the conclusions at which we have arrived upon each of these sections.

CHAPTER I.

I. THE FINANCIAL MACHINERY OF THE GOVERNMENT OF INDIA IN ENGLAND AND INDIA.

5. We describe:—

1. The financial constitution of the Government at home.
2. The constitution of the Indian Government.
3. The financial relations between the Central Government and the Provincial Governments.
4. The financial machinery of the Indian Government.
5. The functions of the Finance Department in relation to the collection of revenue.
6. The functions of the Finance Department in relation to expenditure.
7. The functions of the Public Works Department in relation to expenditure.
8. The functions of the Military Department in relation to expenditure.
9. The audit of public accounts in India.

1.—The Government at Home.

Responsibility for administration of Indian revenues.

6. Responsibility for the administration of Indian revenues is vested by Act* of Parliament in the Secretary of State in Council, and the Secretary of State is answerable to Parliament for the exercise of that responsibility.

Expenditure in India is incurred under rules approved by the Secretary of State in Council. A limited discretion has been delegated to the Government of India; but, apart from that discretion, no new expenditure may be incurred without his sanction. He reviews the annual estimates and accounts of income and expenditure and gives directions upon them to the Government of India.

Expenditure in England.

7. All expenditure in England out of Indian revenues is paid on the authority of an order of the Secretary of State in Council. The establishment of the India Office is regulated by Orders in Council. The discretion of the Secretary of State in Council in respect of other expenditure in the United Kingdom is unlimited, subject, of course, to the supreme control of Parliament. The services paid in England are as follows:—

1. The interest and management of debt, and interest and annuities payable to railway companies.
2. Payments due in England on account of the civil administration of India.
3. Postal subsidy and Telegraph charges.
4. Payments to the Admiralty for naval services in India.
5. Charges for the Persian mission and diplomatic and consular establishments in China, and pensions to the families of Maharajah Duleep Singh, and of the Nawab Nazim of Bengal, &c.
6. Charges of the India Office.
7. Payments to the War Office on account of the home charges of British troops serving or having served in India.
8. Payments for the transport of troops to and from India.
9. Payments for stores for India.
10. Furlough pay to officers on leave from India.
11. Pensions of retired officers and their families.

These payments are charged against the revenue of the year. The India Office makes in addition large payments on account (1) of capital expenditure for railways and irrigation works, (2) of stores for railway companies provincial and local funds, and native states, (3) of remittances of various kinds.

Administrative procedure in the India Office.

8. A Committee of the Council and a Department of the India Office under the Financial Secretary are charged with the examination and consideration of proposals involving expenditure, whether initiated in England or in India. Questions connected with the increase or decrease of taxation, or questions touching, even indirectly, the finances of India are also scrutinised by them from a financial point of view before these questions are referred by the Secretary of State to the Council for decision.

Q. 2469. Large questions affecting the revenues, such as revision of settlements and rates of taxation, are considered by another Committee of the Council and by the Revenue Department of the India Office.

The expenditure on stores is under the control of a separate Committee of Council and of the Store Department.

---

* 21 & 22 Vict. c. 106.

9. The funds for the payment of the home services chargeable against revenue are supplied in the main by the sale in London of bills on the Government of India. A balance is kept sufficient to meet disbursements as they fall due, and any part of this balance not immediately required is temporarily invested. Provision of funds for Home expenditure.

10. The estimates of the Home Government for the ensuing year are prepared by the Accountant-General of the India Office in November, and when approved by the Secretary of State in Council, are forwarded to India early in January. Communications follow between the Government of India and the Home Government, and the latest figures are telegraphed to the Government of India early in March. Home estimates.

11. The home accounts of the Secretary of State in Council are examined by an auditor, appointed under Act of Parliament, who holds office during good behaviour. He is nominated by the Secretary of State, the Chancellor of the Exchequer having a right of veto. Audit of Home Accounts.

The Act* creating the office of Auditor empowers the Queen to appoint by warrant, countersigned by the Chancellor of the Exchequer. The minister who countersigns the Royal sign manual is responsible for the appointment; and it has been questioned whether the Chancellor of the Exchequer ought not to make the nomination.

2.—The Government of India.

12. The Central Government of India is directed by the Governor-General and his Executive Council, which consists of his Excellency and five† ordinary members with the Commander-in-Chief added as an extraordinary member.‡ To each member of the Executive Council is assigned by the Viceroy the charge of one or more branches of the administration. The Viceroy usually takes the charge of the Foreign Department, one member presides over the Finance Department; another over the Military and Marine Department; another over the Home, Revenue, and Agricultural Departments; another over the Legislative Department; and another over the Public Works Department. The Member in charge of a department decides ordinary questions; he refers more important questions to the Viceroy, who determines whether or not they are to be brought under the consideration of the Council. But all cases raising any grave issue, or in which it is proposed to overrule the decision of a Local Government, or which involve a difference of opinion between two departments, are brought up in Council; and not only is any member of Council entitled to call for the papers in any particular case, with a view to its further discussion in Council, but the Secretary of the Department is also empowered to bring to the notice of the Viceroy any case in which he differs from the member in charge as to the proper order to be passed. Moreover, except in cases which require secrecy and despatch, no proposal involving an abandonment of revenue or an increase of expenditure can be decided or considered in Council without previous reference to the Finance Department. Cases which come before the Council are decided by a majority of the members there present, the Viceroy having a casting vote. All decisions of the Government of India, whether they come before the Council or not, are announced upon the authority of the Governor-General in Council. The Legislative Council § consists of the Executive Council with not less than 10 nor more than 16 members added, six of whom are officials, five are recommended by the non-official members of the Madras, Bombay, Bengal, and North-West Provinces Legislative Councils, and the Calcutta Chamber of Commerce, respectively, and the remainder are usually nominated to represent the Central Provinces, the Punjab, and occasionally Burma or Assam. Administration in India. Q. 14,476.

13. The internal administration of India is carried on by eight Provincial Governments under the general supervision of the Governor-General in Council, the Central Provincial Governments.

* The words of the Act 21 & 22 Vict. c. 106. s. 52 are:—"It shall be lawful for Her Majesty by warrant "under Her Royal Sign Manual, countersigned by the Chancellor of the Exchequer, to appoint from time to "time a fit person to be auditor of the accounts of the Secretary of State in Council * * * such auditor shall "examine and audit the accounts of the receipt, expenditure, and disposal in Great Britain of all moneys, "stores, and property applicable for the purposes of this Act, and the Secretary of State in Council shall "by the officers and servants of his establishment, produce and lay before such auditor from time to time "all such accounts accompanied by proper vouchers for the support of the same, and shall submit to "his inspection all books, papers, and writings having relation thereto."

† A sixth ordinary member may be appointed for Public Works, 37 & 38 Vict. c. 91.

‡ The law provides that the Governors of Madras and Bombay are to be Extraordinary Members when the Council meets in their Presidencies. But the Council has not met in those Presidencies since the Mutiny.

§ 55 & 56 Vict. cap. 14.

Government retaining the direct management only of certain territories and of questions affecting the Empire generally. These Provincial Governments are invested with various degrees of authority, but in control over financial administration their powers do not differ greatly. In the first rank come the Presidencies of Madras and Bombay. Both are administered by a governor appointed by Her Majesty and an executive council, and both have also a legislative council. The Presidencies have in some respects* retained their former independence. In the second rank come Bengal, the North-West Provinces and Oudh, the Punjab, and Burma, each governed by a lieutenant-governor (appointed by the Viceroy) with a legislative council. In the third rank come the Central Provinces and Assam, each under a chief commissioner.

3.—Financial Relations between the Central Government and the Provincial Governments.

Provincial Finance.

Appendix, No. 3 Vol.II., p.44, East India Financial Statement, 1887–8, paragraphs 22 to 68.) Lord Mayo's Minute, laid before Parl. Feb.15,1871, and resolution of Indian Govt., 14 Dec. 1870. Lord Mayo, 18 Mar.1871, SirR.Temple, Finl. Statement 1871–2.

14. A knowledge of the financial relations between the Central Government and the Provincial Governments is essential to a knowledge of the Indian financial system. Up to the year 1871† the Central Government retained in its own hands the entire control of finance; and doled out money to meet the demands of the Provincial Governments. The Provincial Governments collected the greater part of the revenue in each province. They had no responsibility for financial administration, and each Government endeavoured to secure for itself from the Central Government as large a share as possible of the common fund. On the other hand, the Central Government was not in a position to fully appreciate local requirements.*

In 1871 Lord Mayo's Government made a new departure. He gave to each Provincial Government a fixed permanent grant out of the revenues collected within the limits of the province. Out of the grant thus made the charges for services specially affecting the Provincial Governments were to be paid, but excess of expenditure over the grant was to be met by revenue raised locally.

In 1877 and in subsequent years this policy was modified and developed. A fixed grant of money is now no longer made, but the whole, or a proportion, of certain taxes and other receipts collected by the Provincial Governments is assigned to them in order to meet either the whole or a proportion of the charges incurred for the various branches of internal administration within the provinces. The Provincial Governments are thus given a direct interest in the efficient collection of the revenue, and we are informed that the collection has in consequence improved. The Provincial Governments may not alter taxation, or the rules under which the revenues are administered, without the assent of the Central Government. They are subject to the general supervision of the Central Government‡ and to conditions concerning the maintenance of great lines of communication, the creation of new appointments, the alteration of scales of salaries, and some other matters. In other respects they have a free hand in administering their share of the revenue.

Provincial financial administration. Q. 122.

15 In each Province a branch of the secretariat is specially charged with financial administration, under the immediate control of a Member of the Council in the Presidencies, in the other Provinces of the Lieutenant-Governor or Chief Commissioner. Correspondence is conducted with the Central Finance Department through this Department. The Civil Accountant-General, who represents in the province the Finance Department of the Central Government, is considered a financial adviser of the Provincial Government, but in this capacity he has no power beyond that of tendering advice.

Provincial contracts.

16. The arrangements between the Central and Provincial Governments, commonly called provincial contracts, are concluded for periods of five years. Towards the close of each quinquennial period the provincial finances are reviewed. An estimate of the expenditure thought necessary for each province is made, and a proportion of the provincial revenue sufficient for that expenditure is assigned to the province. Thus,

---

* *e.g.* The Governors of Presidencies in Council correspond on certain subjects direct with the Secretary of State.

† Before 1871 Bombay alone raised a revenue for local purposes.

‡ "The Governor-General in Council will not relinquish his general power of supervision and control in any Department, but his Excellency will as far as possible avoid interference with the details of the administration of the transferred revenues, and any embarrassment of provincial finance." (Resolution of Government of India, 22nd March 1877.)

under the revised arrangement of 1897 the Provincial Governments, speaking generally, retain the whole of the provincial rates, three-fourths of the revenue from stamps, half the revenue from assessed taxes, from the forests and from registration, one-fourth of the land revenue, one-fourth of the excise (one-half in Burma and Bengal), and a large part of the departmental receipts, with the exception of railway and irrigation for the most part, and military receipts. The Provincial Government takes for five years its proportion of revenue resulting from this division, the Imperial Government taking the balance. Thus, both Governments benefit proportionately by any increase of revenue accruing during the period. The Provincial Government retains any balance which it may have accumulated by careful administration during the expiring period.

17. In the case of extraordinary expenditure causing a deficit in the budget of the Central Government, the Central Government may call, and has called, upon the Provincial Governments to surrender a portion of the balances of revenue in their hands. It did so during the Afghan war, but it subsequently made good to the provinces the sums reclaimed (Rx. 670,000). It did so in 1886–7 in order to meet the charge of the Burma war, and the fall in the gold price of silver (Rx. 400,000); again in 1890–1 (Rx. 490,000); and again in 1894–5 (Rx. 405,000); but in the last two instances the amounts were subsequently refunded.

But, apart from such pressure, the Central Government undertakes the extraordinary risks of Government. Sir E. Baring (Lord Cromer), in the financial statement of 1883, pointed out that Indian finance is exposed to four special dangers—war, fall in opium, fall in exchange, and famine. The provincial contract system throws the burthen of the three first risks on the Central Government. Only the fourth falls on the Provincial Governments. In the case of famine, the Provincial Governments may not call upon the Central Government for assistance until they have exhausted their current income and a certain proportion of their accumulated balances.

Provincial and local rates.

18. Further, such of the Provincial Governments as have legislative councils (viz., Madras, Bombay, Bengal, the North-West Provinces, the Punjab, and Burma), may, with the consent of the Government of India, impose provincial or local rates and cesses, and may apply the produce to provincial or local purposes.

In development of the policy of decentralisation, the Central Government has desired the Provincial Governments to delegate to subordinate authorities items of revenue and expenditure, which those authorities can administer with success.

Division of services administered by the Central and Provincial Governments.

19. It must be borne in mind that this division between central and provincial expenditure does not mean that services administered by the Central Government and by the Provincial Governments, respectively, are distinct services in the sense that the services administered by local authorities in England are distinct from services administered by the Imperial Government. The income and expenditure of the Provincial Governments are incorporated into, and form part of, the income and expenditure of the Indian Empire, and appear as such in the annual accounts of the Central Government. The Central Government, as a matter of convenience, keeps in its own hands the collection of certain revenues, such as those of the Salt Department in Northern India, the Post Office, the Telegraph Department, and those of the districts of Coorg and Ajmere, besides certain receipts connected with the Army and other services, while it leaves to the Provincial Governments the collection of the rest of the revenue; but the sums collected, whether by the Central Government or by the Provincial Governments, are brought alike under their different heads into the general budget or central account of the State. Again, the Central Government keeps in its own hands the expenditure on the army and on the Indian marine, on certain military roads, on railways and telegraphs, on most of the charges for the post office, and on the mint, and the main part of the expenditure on foreign affairs. A share of the cost of collecting certain heads of revenue is charged in the same proportion as the revenue to the Imperial and Provincial Governments. When the revenue is Imperial, the cost of collecting it is generally Imperial, even when the revenue is collected by the Provincial Governments on behalf of the Imperial Government. Lastly, the Imperial Government delegates to the Provincial Governments the bulk of the expenditure on civil administration, law and justice, registration, medical service, gaols, police, education, ordinary roads, civil buildings and works, printing and stationery, and pensions, and some works, such as canals and other irrigation works; but this provincial expenditure, like the expenditure incurred by the Central Government, is brought into one general account of the expenditure of the State, and it is audited by officers of the Central Government stationed in the various provinces where the expenditure is incurred.

4.—The Financial Machinery of the Government of India.

(a.)—*Organisation of the Finance Department.*

Central Financial Department.

20. In India the ultimate control of finance rests with the Governor-General-in-Council. He is advised on financial questions by the Financial Member of Council, the Indian Chancellor of the Exchequer. The Financial Member of Council presides over the Central Finance Department at Calcutta. A large staff of Imperial officers is employed under him, viz.:—

(1.) At the head-quarters in Calcutta—
The Secretary of the Government of India in the Finance Department.
The Comptroller and Auditor-General.
The officers of the Financial Secretary, and of the Comptroller and Auditor-General.

(2.) In the Provincial Governments—
(i.) At the head-quarters of the Province, the Civil Accountant-General.*
Under him, a staff of examiners and their subordinate officers.
(ii.) In the Provinces—
The officers in charge of the district treasuries, so far as their duties are Treasury duties.

District Treasuries.

21. The Revenue in India is not, as in England, remitted to one central bank, and the disbursements of the military, civil, public works, and other services are not defrayed from one central chest or bank. Each district, as far as possible, provides its own ways and means.

The starting point, therefore, of the Indian financial system is the district treasury, which receives the revenue of all kinds collected within the district, and makes, directly or indirectly, all payments for services, including the cost of collecting the revenue, which fall due within the district. There are 266 district treasuries in the Empire, besides sub-treasuries.† The sub-treasuries are situated at outlying posts in districts, and are subordinate to the neighbouring district treasury.

Each district treasury is in the charge of one of the officers on the staff of the collector of the district. This officer usually performs duty as an assistant collector of revenue, and is a magisterial officer, as well as a Treasury officer. In the latter capacity he is subordinate to the Civil Accountant-General of the Province, to whom he renders accounts, and under whose instructions he makes his disbursements. It is the duty of a Treasury officer to provide for the payments belonging to his district; to apply to the Accountant-General for a remittance, if necessary, and to remit moneys not needed for the service of his district to other district treasuries as the Accountant-General may direct. The remittance of funds to and from a treasury lies entirely with the Accountant-General of the Province.

Qq. 135–7.

22. The orderly administration of Indian finance depends greatly on the manner in which the district treasuries are regulated and controlled, and upon the speed and accuracy with which accounts are submitted by the district treasuries to, and are analysed and consolidated by (1) the Civil Accountant-General at the head-quarters of the Province, and (2) the Finance Department at Calcutta.

(b.)—*The Functions of the Finance Department in relation to the Collection of Revenue.*

Revenue system.

23. In the United Kingdom the Chancellor of the Exchequer is the responsible and active chief of the revenue administration. The two great revenue boards, which manage and control the collection of taxes throughout the kingdom, sit in London, and their chairmen are in constant communication with him. He answers in Parliament for their acts, and appeal from their decisions lies to him, as wielding the powers of the Board of Treasury. The Post Office, including the Telegraph Department, the Woods and Forests, the Mint, and other minor revenue offices, are also subject to him financially. The returns furnished to him weekly, monthly, and quarterly, enable him to follow closely fluctuations in receipts and he has at hand the heads of the revenue offices to assist him in ascertaining the causes of fluctuation and in forecasting the progress of his receipts. Further, he has, in intercourse with the chief

* Called in the smaller Provinces the Comptroller.

† There are separate military chests or treasuries at Mhow and three other places, where there are no civil treasuries. (App. No. 85, Vol. III., paragraph 19.)

expert officers, ample opportunity for learning defects in revenue laws or in the administration of the revenue department. Thus he is not only invested with the authority of Chief Officer of the Revenue, but he has the means of exercising that authority directly and effectively, and the personal impress which Chancellors of the Exchequer have left on the financial administration of the present century shows that centralisation of power has enabled holders of the office to discharge effectively the powers entrusted to them. The Chancellor of the Exchequer works the financial machine himself.

24. The revenue system of India is organised upon a different principle. Owing to the vast extent of territory, and the necessary partition of the country into separately organised Provinces, the Finance Minister has not to the same degree as the Chancellor of the Exchequer direct control over the departments entrusted with the collection and management of the revenues. For the same reason, his sources of information are not as easily or as immediately accessible. The larger area over which his operations extend, makes it impossible for him to learn details by correspondence, by summoning officers from distant centres, or by visiting them himself, as speedily as is possible within the narrower limits of the United Kingdom. But, although centralisation in finance suits a comparatively small and homogeneous State, decentralisation is more convenient for an immense territory, and for races varying in religion, in language, and in degrees of civilisation. Sir D. Barbour says, in illustration of this point, that Europe could not be governed in detail from one capital; and Lord Cromer contends that it is impossible for one central authority to enforce economy on a continent such as India. Q. 1964. Q. 13,586.

25. The Indian revenue system indeed varies from the English at almost every point. One law on customs, excise, and stamps applies, with a few exceptions, to the whole of the United Kingdom. In India the laws under which the revenue is collected vary to a certain extent in the different provinces, so that there is not one excise law, or one salt duty law, applicable to the Empire. It is, of course, the duty of the Central Government to take precautions against such variation giving rise to financial embarrassment. No change, therefore, can be made in taxation or in any existing system of revenue management without the approval of the Central Government, and it may be added that proposed alterations in the revenue laws are usually submitted for the criticism of local bodies affected by them, before they are submitted to the Legislative Council for enactment.* Again, in the United Kingdom, the Revenue Administration is centralised, as we have stated, under the Chancellor of the Exchequer in London. In India the administration of some branches of revenue is centralised, though not always under the Finance Minister. That of other branches is decentralised The Land Revenue, representing a third of the net revenue of the State, is under the control of a central department at Calcutta, but that department is subject not to the Finance Minister but to the Minister in charge of the Home and Revenue Departments. The Telegraph Department is under the Minister of Public Works. The Central Government controls the collection of part of the salt duty and of part of the opium revenue, of the post office revenue, and of other revenues. On these heads the Finance Minister can get information either directly or through his colleagues from expert officers in Calcutta. The remainder of the revenue is collected by the Provincial Governments, and the collecting authorities vary in the different provinces. In Bombay there are Commissioners of the Land Revenue, a Commissioner of Customs, Salt, Opium, and Excise, and a Superintendent of Stamps. In Madras, a Board of Revenue administers customs, salt, and excise. In Bengal and the North-West Provinces there are also Boards of Revenue. In the Punjab there is a Financial Commissioner and a Settlement Commissioner; in Burma there is a Financial Commissioner, and in the Central Provinces there is an Excise Commissioner and also a Superintendent of Stamps. As regards, therefore, a large portion of the revenue, the Provincial Governments are units of administration, and are efficiently equipped for their duties. The Finance Minister corresponds with these officers officially through the Provincial Governments. On questions of great importance he may have to visit the provinces himself, and confer on the spot with the revenue authorities and public bodies, as Mr. Wilson did in 1860 when maturing his scheme of an income tax, and as Sir James Westland did when the re-imposition of the cotton duties was under consideration. Qq. 39, 40. Q. 252. Q. 673,784. Q. 248. Q. 270.

* The Central Government has directed that all customs orders of general application are to be published in the "Gazette of India."

26. The revenues collected under these different authorities are paid, as we have said, by the collecting officers into the nearest District Treasury, and the officer in charge of that Treasury reports at the commencement of each month the amount of his receipts in the preceding month. Later in the month he sends forward a further and more detailed account of those receipts. Both accounts are addressed to the Accountant General at the headquarters of the province. The Accountant General consolidates the accounts as they are received into one account for all the district treasuries under him, and he forwards it to the Comptroller and Auditor General at Calcutta, who lays it before the Finance Minister. Thus the Finance Minister learns early in the month his gross receipts up to the close of the preceding month, and later in the month he learns the particulars under general heads; but he only learns the fact that certain sums have been paid into the treasuries under the heads of Customs, Excise, or other branches of revenue, for the officers in charge of the district treasuries, from whom he derives his information, are merely bankers, and can give no explanation about the sums paid over to them. Such explanation must be furnished by the collecting departments. The Accountants-General are instructed to inform the Finance Minister monthly, through the Comptroller-General, of any large increase or falling off in the revenue, and they furnish monthly to the Comptroller-General a resource estimate, which gives for the current month and the next two months a forecast of expected receipts, as far as can be gathered from the latest facts then available.*

Q. 406.

Qq. 441, 447–9.

The estimates of revenue required for the Budget are framed by the departments responsible for the various heads of revenue, and are forwarded by them to the Central Finance Department. The estimate of each branch is finally decided by the Finance Minister in communication with the department concerned.

(c.)—*The Functions of the Finance Department in Relation to Expenditure.*

27. The rules governing the preparation of the estimates and accounts and the expenditure of money by public accountants are contained in the Civil, Public Works, and Military Account Codes.

Civil Expenditure. Civil Account Code, Article 5. Qq. 510–524, 906.

A Treasury Officer may not make any payment unauthorised by the Code, unless under an express order from the Government, and he must enforce any order from the Civil Accountant-General disallowing a payment. If the Provincial Government overrules the Accountant-General, even temporarily, reference must be made to the Government of India.

28. Payments by the Finance Department from the district treasuries are either final payments or imprests. They are made through four different channels, viz.:

Q. 194.

Payments on account of Civil Administration for which the Central Government is responsible.
Payments on account of Civil Administration for which the Provincial Governments are responsible.†
Payments for Public Works.
Payments for Military Services.

The greater part of the payments made by the district treasury officers for civil services are of a simple character and final. That is to say, they are made to the persons actually entitled to the money, *e.g.*, an officer to whom salary is due, a merchant who has supplied goods. In these cases the district treasury officer produces to the auditor the final proof of payment. As soon as the Budget is passed, the Imperial Departments and the Provincial Governments are informed of the amounts granted to them, and they authorise the disbursing officers to incur expenditure within the limits of the grants. The district treasuries are authorised to honour the orders of the disbursing officers within the limits assigned to them. Special authority is required for expenditure in excess of the budget grants.

The payments for Public Works.‡

Public Works Expenditure.

As soon as the budget is passed the Finance Department informs the Public Works Department of the sums appropriated to each province and each work. The chief officer of account in the Public Works Department of the Province sends monthly to the Civil Accountant-General in the Province a statement of the amount required for

---

* The local authorities responsible for the collection of revenue are informed by the Accountants-General of the amounts received by the District Treasuries under the different heads.

† The Civil payments include expenditure incurred in collecting the revenue.

‡ The financial procedure in the Public Works and Military Departments are described in paragraphs 42 and 49. We are dealing here only with procedure in the Finance Department.

public works in each district of the Province, and the Accountant-General directs the officers of the various district treasuries to issue those amounts, satisfying himself that the demands are in accord with the total sum assigned and with the general scheme of work mapped out for the Province.

Any excess over the budget grant requires the special sanction of the Government of India, but discretion is given to the Civil Accountant-General to authorise a credit in anticipation of sanction, should he consider that there is sufficient reason for such a course.

Payments for military service.

Military Expenditure.

India is divided into four military commands. The Controller,* or chief military financial officer, at the headquarters of each command is apprised by the Military Department at Calcutta of the sums granted in the budget for military service in his command, and he fixes, in concert with the Civil Accountant-General, the sums for which the military disbursing officers in the command may draw monthly upon the several district treasuries within the Province. The Civil Accountant-General authorises the Treasury officers at those treasuries to honour the drafts up to the specified amounts.

In cases of extreme urgency a supplementary credit may be opened with the district treasury on the authority of the officer commanding the station. A credit of this kind is brought to the notice of the Civil Accountant-General in the monthly Treasury accounts.

In all these cases the cash required for the public service is obtained from the district treasury.

For a large part of the payments in the Public Works and Military Departments, the district treasuries make imprests or advances to the disbursing officers. The disbursing officers in these cases make the actual payments and produce the vouchers in support of them.

Movement of Funds.

29. Cash is not allowed to accumulate in a district treasury, and money not required in the district is remitted, either in actual coin or by means of bills bought from local traders, to a central treasury, where payments are large and where money is wanted. The movement of funds was formerly a source of expense to the Government, but of late years the sale of bills has considerably increased, and the favourable terms on which they are bought has converted the charge into a profit. Thus, in 1883–4, the movement of funds cost the Government net nearly Rx. 8,000; in 1893–4 it realised for the Government a net profit of nearly Rx. 10,000.

See note to paragraph 160 of this report.

Q. 2831.

30. The district treasuries (with a few exceptions) are in telegraphic communication with the Civil Accountant-General of the Province. He is informed twice a month of the actual amount of the balances in each district treasury, and he also receives a monthly estimate from each treasury of the probable receipts and issues of the current and two succeeding months. On this information he directs the transfer of funds from surplus to deficit treasuries.

31. At a station where a Presidency bank or a branch of a Presidency bank exists, part of the Government balance is almost invariably deposited in it. Interest is payable to such banks under their agreements with the Government, when the balance at their head offices† falls below a prescribed amount, but a large portion of the Government balance at the Presidency towns is kept in a strong box or reserve treasury. Experience has shown that, if large amounts are placed at the disposal of banks, the banks may not be able to meet promptly heavy Government drafts without straining heavily their means for meeting the demands of commerce. In fact, a bank employs a Government balance rather as an advance for the accommodation of trade than as an ordinary deposit, and instances have occurred of remonstrance‡ when the Government drew freely on its balance. The minimum cash balance which the Finance Department maintains is Rx. 8,000,000—not an excessive minimum when the area over which expenditure extends is considered.

Accounts of District Treasuries.

32. The Civil Accountants-General at the headquarters of the Provinces receive on the 2nd of each month from the district treasuries in their respective Provinces an abstract of their accounts for the preceding month, and also a Statement of cash balances in the treasuries. The Accountants-General examine and consolidate these

* In India the civil officer is written "Comptroller," the military officer "Controller."

† In the case of the branch banks the Government guarantees no minimum balance, and it pays no interest as long as it has any balance at all in those banks.

‡ The Government had on one occasion a balance of Rx. 1,000,000 at the Bank of Bombay. They proposed to draw Rx. 350,000 and the Bank remonstrated.

accounts, and telegraph the consolidated results on the 8th to the Comptroller-General in the Finance Department at Calcutta. A few days later the Accountants-General receive from the treasuries fuller details of the chief heads of civil expenditure, and of the net imprests to the Military and Public Works Departments for the preceding month, and they forward the results by the 16th of the month to the Comptroller-General. On their side the disbursing officers of the Works and Military Departments report to the chief officer of accounts in their respective Departments at the head-quarters of the Province or Command the heads of their expenditure in the preceding month. The chief officers of account report the total receipts and expenditure of their respective services to the Works and Military Accounts Departments at Calcutta, and these Departments forward consolidated accounts of the total Military and Public Works expenditure to the Comptroller and Auditor-General in the Finance Department at Calcutta.

33. The Comptroller and Auditor-General lays before the Financial Member of Council on the 9th of each month a summary of the issues throughout India during the preceding month, and of the cash balances remaining in the treasuries. On the 16th he lays before his chief a fuller detail of the civil expenditure, and by the close of the month full statements of the public works and military expenditure.

General Accounts.

From these Returns the Financial Member of Council learns early in the month the total issues of the Indian Empire up to the close of the preceding month; and fairly complete information in detail of his expenditure up to that date is furnished to him by the close of the month.

On the 25th of the month the Comptroller and Auditor-General submits to the Financial Member of Council an estimate (the "Resource Estimate") of the probable payments, and the cash balances of that month and the two succeeding months, and thus the Financial Member is kept closely informed of the coming requirements of the whole Indian Empire.

Q. 121.

The estimates and accounts of Indian revenue and expenditure centre in the office of the Comptroller and Auditor-General. He consolidates and, so to speak, focusses the information for the use of the Financial Member and of the Government of India.

The Accountants-General are instructed to inform the Comptroller and Auditor-General monthly of any excessive proportionate outlay under any grant, and of any important differences which are anticipated between actual expenditure and the budget estimates; and the duty is impressed upon the Accountants-General to immediately warn the Local Government, or the Department concerned (if the administration is Imperial), of the first appearance of excess of outlay under any grant.

Estimates.

34. We come now to the preparation of estimates of expenditure. New and extraordinary services and proposed additions to, or reductions of, the estimates for the coming year are discussed by the heads of the departments and the Finance Member of Council, either before or during the preparation of the estimates. The departments throughout India prepare in the autumn their estimates for the year beginning on the following 1st of April.

Article 153, Civil Account Code.

(1.) The estimates of civil expenditure under the charge of the central government are framed by the officers immediately responsible for the administration of that expenditure. They are submitted to the Comptroller-General in the Finance Department, and are forwarded by him to the Secretary in the Finance Department by the middle of January; the Financial Member of Council then considers and approves them.

(2.) The Provincial Governments are responsible for the estimates of revenue and expenditure under their control, but their estimates are subject to examination by the representative in the province of the Central Finance Department, viz., the Accountant-General, who may give advice, but may not alter the figures in the estimates without the consent of the Provincial Government. The Provincial Governments, after considering the comments of the Accountant-General, forward their estimates to the Central Finance Department at Calcutta about the middle of January. The Finance Department, in communication with its Accountants-General, and with the Provincial Governments, consider the estimates with special reference to the rules under which the provinces administer revenue and expenditure, and to the probability of the estimates of revenue being realised, but it does not interfere with the discretion of the Provincial Governments in details. The provincial estimates are finally approved by the Financial Member of Council.

(3.) The preparation of the public works and of the military estimates is described in the sections of this report which relate to financial procedure in those Departments. The Public Works Department submit their estimates to the Finance Department by the end of February. They are examined in the Finance Department by the Comptroller-General, and are finally approved by the Financial Member.

(4.) The Military Department submits the military estimates to the Finance Department by the end of February. They are examined by the Comptroller-General, and finally approved by the Financial Member.

35. The Comptroller and Auditor-General* in the Finance Department consolidates the estimates thus forwarded into the Budget for the ensuing year, adding his own estimates for services (such as the public debt) for which he is responsible.

The Budget in complete form is then submitted to the Financial Member, and, as approved by him, is laid before and passed by the Governor-General in Executive Council. The financial year in India terminates, as in England, on the 31st March, and the Budget, containing estimates for receipts and issues *during* the year, is usually opened by the Financial Member in the Legislative Council of the Governor-General in the last week of March. This date is determined partly by the fact that the Government removes soon after that time from Calcutta; but there is administrative convenience in passing the estimates for the coming year before the close of the expiring year. The Legislative Council does not vote the Budget. It can comment upon it, but it may not alter or amend it. When the Budget has been approved by the Governor-General in Council, the Finance Department informs the different departments that the sums approved have been placed at their disposal, and credits are then opened in the disbursing offices in the manner described in paragraph 28. After the close of the financial year the Comptroller and Auditor-General prepares the Finance and Revenue Accounts which give in detail the income and expenditure of the Indian Empire during the expired year.

(*d.*)—*The Functions of the Public Works Department in Relation to Expenditure.*

Operations of Public Works Department. Q. 341–8.

36. The Public Works Department is responsible for the erection and repair of public buildings, for the construction and maintenance of roads and canals, and for the construction and superintendence of railways and irrigation works. In 1897–8 the expenditure on railways under the control of the Department amounted, in round figures, to Rx. 22,700,000, on irrigation to Rx. 3,000,000, on civil buildings and roads and on famine protection works to Rx. 5,456,000, in all to about Rx. 31,600,000. Capital expenditure in addition on railways and irrigation works amounted to Rx. 4,378,000, making a total expenditure on works of about Rx. 36,000,000, exclusive of about Rx. 1,000,000 spent on military works, but charged to the Public Works Budget. Expenditure on works is either Imperial or Provincial. The Imperial Government executes and pays for "Imperial works," often employing a Provincial Government as its agent. The Provincial Governments execute and pay for "Provincial works." The great works at Periyar providing a water supply for part of the Province of Madras were constructed by a chief engineer of the Madras Public Works Department. On the other hand, a railroad passing through more than one province is under a chief engineer appointed by the Public Works Department of the Government of India. Works estimated to cost over Rx. 100,000 or, if rolling stock and the like charges are included, Rx. 125,000, require the sanction of the Secretary of State. Works in Madras and Bombay, estimated at more than Rx. 20,000, and in other Provinces at smaller amounts proportionately, require the sanction of the Government of India.

Q. 876.

Q. 1659.

Organisation of Public Works Department.

37. A member of Council is always at the head of the Public Works Department. He has under him (1) a †Secretary and an Assistant Secretary, and (2) an Accountant-General. This central office is Imperial; it is charged with the execution of Imperial works, and supervises the execution of railways; but irrigation works, roads, and buildings are generally executed by the staff of the Provincial Governments on behalf of the Imperial Government. The Central Office exercises also a general, but limited, control over Provincial works. It criticises the estimates of works proposed by the

* The Secretary in the Finance Department also compiles an independent set of the budget estimates for the Financial Member.

† The Public Works Staff has recently been re-organised. It now consists of (1) a Secretary, a Joint Secretary for Irrigation, Directors of Railway Construction and of Traffic (who are also Deputy Secretaries) and (2) an Accountant-General (who is also Deputy Secretary).

Provincial Governments, compiles the consolidated budget of Imperial and Provincial works, and it keeps the consolidated accounts of the Imperial and Provincial expenditure
Q. 1475. on works. The central office is divided into five branches, viz., the Buildings and Roads branch, the Irrigation branch, the State Railways Construction branch, the State Railway open line branch, and the Accounts branch, which is also the Audit branch. Each Provincial Government has its Secretary of Public Works and its Public Works establishment. The executive officers of the provincial establishment are
Q. 877. appointed by, and are responsible to, the Provincial Government; on the other hand, the financial officers in the Provinces are appointed by, and are responsible to, the Imperial Government, being subordinates of the central office described above.

Military Works. Q. 348. Q. 1544. Qq. 1674 1682–6. Q. 1705.
38. The cost of military works is defrayed, not from the military budget, but from the public works budget. All important military works are executed by a separate department under the Director General of Military Works, who frames the estimate for this branch of service, and sends it to the Central Public Works Department for insertion in the budget of Public Works. The Public Works Department is therefore, so far as military works are concerned, simply the Paymaster of a branch of Army expenditure, which it neither orders nor controls; and thus over Rx. 1,000,000 a year of military expenditure appear in the estimates and accounts under the head of Civil expenditure, though shown separately.

Q. 781. The Telegraphs form a separate branch of administration under the Director-General of Telegraphs. They are kept in the hands of the Imperial Government, and are subject to the general control of the Public Works Department.

Famine Protective Works. Q. 1533.
39. Famine protective works are charged against the Famine Grant; but other expenditure on great undertakings, viz., railways and irrigation works, is not charged against revenue, but is carried to capital account, and the cost of these undertakings is provided in the main by loan. These loan works must be approved by the Secretary of State, and they must be productive. For that purpose the estimates must show good reason for expecting that a railway will in five years earn interest on the money borrowed for its construction, and will recoup the interest paid during construction, and that an irrigation work will on the same principle pay its way in ten years.

Q. 301, 302.
40. The Public Works Department regulates the traffic arrangements on the State Railways. There are maximum and minimum rates within which the railway administrations can exercise a discretion, reporting their action to the Public Works Department. If an alteration of rates is proposed involving a loss of revenue, the proposal is submitted to the Finance Department.

Financial Administration of Public Works Department. Q. 1494. Q. 1501.
41. The financial administration of the Public Works Department is regulated by the Public Works "Code," the financial provisions of which can only be altered with the assent of the Finance Department. It is conducted by the Accounts branch of the Central Works Department, which consists of the Accountant-General; the Deputy and Assistant Accountants-General, and a staff of examiners, including a special examiner of military works, and other officers, about 80 in number. The Accounts branch of the Public Works Department in each Province is also subject to the Public Works Accountant-General at Calcutta. The Examiner is the chief financial officer of the Public Works Department in the Province. His duties are in the main those of an auditor, but he is in addition an advising officer of the Provincial Government. There is also an examiner attached to each important railway.

Q. 1603. The Examiner in each province makes up a yearly statement of the expenditure on works in the province, and the Accountant-General of the Public Works Department at Calcutta prepares from these provincial statements a general statement of the
Q. 1609. expenditure upon public works in the Indian Empire during the expired year, which is inserted in the Finance and Revenue Accounts. The Accountant-General also publishes annually a memorandum on the accounts of the Public Works Department, in which he reviews the progress of expenditure and mentions special irregularities.

Public Works Estimates. Qq. 1637–40.
42. In October the Provincial Governments send up to the Public Works Department at Calcutta schemes of the works which they recommend for execution in the ensuing financial year. The schemes, including both Imperial and Provincial works, are considered at headquarters in concert, so far as is necessary, with the Finance Department, and, as approved or modified, are returned to the Provincial Governments. The financial exigencies of the State necessitate occasionally reductions in this branch of the public expenditure.* The executive officers of the Provincial Public Works

* Mr. Becher, Deputy Accountant-General in the Public Works Department, gave the year 1893–4 as an example.

Departments, on receiving back the schemes, prepare their several estimates on the basis as approved, and forward them to the Public Works Examiner at the Provincial headquarters, who consolidates and submits them to the Provincial Government, and the Provincial Government forwards them to the Public Works Accountant-General at Calcutta by the middle of January. The Accountant-General then prepares his general budget of works, both Imperial and Provincial, for the year, and submits it to the Member of Council in charge of the Public Works Department, who sends it to the Finance Department about the middle of February. It is finally sanctioned as part of the general budget by the Governor-General in Council. As soon as the budget is sanctioned, the Provincial Governments are informed of the sums which they may spend on each work, and a credit is opened at the convenient District Treasury for each executive officer in charge of a work, placing at his disposal the monthly amounts which he is authorised to spend. Qq.314,1553.

(e.)—The Functions of the Military Department in Relation to Expenditure.

43. India is divided into four military commands, Bengal, the Punjab, Madras and Bombay. Each of the commands is an administrative military unit, subject only to the supreme control of the "Government of India in the Military Department," in other words, of the Indian War Office. The head-quarters of the Indian Army are at Simla. Military Administration. Q. 872.

44. The Military Member of Council is immediately responsible for the financial and departmental administration of the army. The Commander-in-Chief is immediately responsible for the discipline and efficiency of the army and for the movement of troops. He has practically* no financial power. His proposals, if they involve expenditure, changes of organisation, or other important questions, are examined financially by the Military Member of Council before they are submitted to the Viceroy. The Military Member corresponds in a certain sense to the Secretary of State for War in the present organisation of the War Office at home, but with this important difference, that the Secretary of State is supreme, whereas the Military Member is not the official superior of the Commander-in-Chief in India. In the event of difference between them on matters of importance, the decision lies with the Governor-General in Council. In fact the Military Member holds a position intermediate between that of the present Secretary of State, and that of the old Secretary-at-War in the Home Administration, who, it will be remembered, was responsible only for the finance of the army. The Military Member has a seat on the Executive Council of the Viceroy, as an ordinary member. The Commander-in-Chief also is almost invariably appointed an extraordinary member. Thus a somewhat disproportionate weight of voting power is apparently given to military opinion in the Council, which, including the Viceroy, consists of seven members. It is argued, however, that this is not the case, and that the Military Member represents the principle of economy in military finance. Theoretically, he is rather a check on, than an ally of the Commander-in-Chief: but it is not agreed how far in practice this is, or is not, the case. Sir E. Collen, who was Secretary in the Military Department, and is now Military Member of Council, told us that the Military Member is economical both by theory and in practice; and he gave us several instances in which the Military Member had reduced the estimates. He contended that it is the duty of the Military Member to check undue expenditure, adding that the Military Member and the Finance Member are often allies. His view is supported by the evidence of Sir H. Brackenbury. Sir David Barbour, formerly Finance Member of Council, admitted the theory, but did not altogether agree as to its application.

Military Member of Council. Appendix No. 86. Vol. III., Q. 14,476 *et seq.* Q. 14,411. Qq. 3623, 13,567–70, 15,547. Q. 3557. Q. 1860.

45. The Military Department of the Government of India at Calcutta is divided into two branches: that of the Secretary, and that of the Accountant-General.

(1.) The Secretary as Chief Officer of the Department, is responsible for the whole of the military business of the Department, and he gives attention to financial as to other business; but the secretariat is mainly employed upon the general administrative business of the army. The circular of October 1894, abolishing the independent commands of Bombay and Madras, and reorganising the army of India, made the regulations for watching and controlling military expenditure more strict. There is

Organisation of Military Department. Appendix No. 86. para. 2., Vol. III. Executive Branch. Q. 1168. Q. 3505.

* He is permitted to spend a sum not exceeding Rs. 10,000 in a month on unforeseen and non-recurrent services. The Lieut.-Generals at the head of the commands enjoy severally a like permission to the extent of 2,500 rupees. Qq. 3581, 3662–75.

more consultation of the Finance Department, and less latitude is allowed to the Secretary and to the Accountant-General. Every proposal involving increase of expenditure, though it be only to a small extent, must be submitted to the Military Member of Council before it is referred to the Finance Department. Thus the Military Member, at the cost perhaps of some time devoted to matters of minor importance, learns in its minute details, and keeps in his own hands complete control over, the whole of the military expenditure.

Accounts Branch. Q. 1150. Q. 3350. Qq. 3460–8. Q. 1405.

(2.) The Accountant-General is also Deputy Secretary in the Military Department. His Department is divided into two sections. The duties of the first section are executive, and pertain to him rather as Deputy Secretary. They deal with such questions as pay, allowances, and contracts. This section was created on the Report of a Committee appointed by the India Office in 1880 to investigate the errors which had occurred in estimating the charge of the Afghan War. The Committee recommended that the Accountant-General should be also Deputy Secretary. The second section is the Military Accounts branch. The central accounts of the army are kept, and the budgets of the commands are received, revised, and consolidated in this section. The Accountant-General is the principal officer of record in the Military Department. He is not the head of the military finance administration, so far as accounts are concerned, for the financial officers of the Military Department in the Commands are directly subordinate on questions of account to the Comptroller and Auditor General in the Finance Department. Sir Oliver Newmarch, who has held the post, told us that the Military Accountant-General is not charged with direct audit work. On other questions of finance the military financial officers in the Commands are directly subordinate to the Military Department, sending their returns and statements to the Military Accountant-General. That officer is consulted by the Military Member of Council on financial questions. It is his special duty to keep the Military Member informed as to the progress of military expenditure. He cannot be overruled by the Military Member of Council unless the Finance Department concurs. A Deputy Accountant-General, an Assistant Accountant-General, and a staff of controllers, examiners, accountants, and clerks are attached to this branch* at Calcutta and in the Commands.

App. No. 86, para. 22., Vol. III.

para. 2.

Financial organisation in the Commands.

46. Next in the order of military financial administration come the Commands. Each Command is a separate and fully equipped unit of administration, subject only to the Central Military Department at Calcutta. Each has its own administrative departments (such as the commissariat, the ordnance, and the clothing departments) and its own staff of financial officers. The chief financial officer of each command is the Controller of military accounts. He is the head of the military financial staff attached to the Command, and he is responsible for the orderly conduct of finance within the Command. He corresponds on questions of account directly with the Comptroller and Auditor-General in the Finance Department, but on other financial questions he corresponds with the Military Department. The Controllers are enjoined to control all the offices charged with financial duties which are attached to their Commands, in such a manner as to ensure the due performance of their duties by the examiners and other officers. The Controllers have further to arrange for the periodical inspection locally of the accounts of such regiments and departments in their Commands as they may select.

App. No. 86, paras. 21, 22, 23, 24., Vol. III. Q. 1334. Q. 1401–3. Army Circular, Nov. 1, 1895 p. 19, para. 25.

47. The other financial officers in the Commands are (1) the disbursing officers; (2) the examiners of military accounts with their subordinate officers. (1.) The disbursing officers are officers of the commissariat, regimental paymasters, commanding officers of native regiments, remount and clothing officers—in short, all officers entrusted with the payment of army services at places where troops are stationed or military departments are established. They render accounts to the Controller of military accounts, though they are not otherwise subordinate to him. There are, in all India, 191 military stations, and 582 disbursing officers.

Q. 1190, *et seq.*

(2.) The military examiners of accounts, with their officers, are subordinates of the Controller. They are mainly employed in auditing the accounts of military expenditure in the Command. There are three of them at the headquarters of each Command. They are usually military officers seconded originally for five years from their regiments, and then allowed to choose between the two careers. Occasionally civilians trained in the department are raised to the rank. The examiners have

Q. 1327.

Q. 3627.

* Four controllers, 16 examiners, 56 deputy and assistant examiners, 122 accountants, 881 clerks, besides 8 special or probationer examiners. Para. 4, App. No, 86.. Vol. III.

under them deputy and assistant examiners (who are usually non-commissioned officers) besides accountants and clerks.

48. So far we have described the staff engaged in the financial duties of the Military Department, but, in order to understand financial procedure, we must follow it through the stages of estimate, issue, and expenditure.

Military Estimates.

1. *Estimates.*—About the middle of August in each year the Controller in each Command asks the heads of military departments in the Command for their estimates for the ensuing year. He himself prepares certain estimates (such as that of the pay of the forces), for which he is responsible. The estimates of the heads of departments are submitted to the Controller at different dates between the 15th September and the 15th October. These estimates are revised by the Controller, and are returned to the heads of departments for submission to the Military Accountant General, to whom they must be forwarded by the 15th December. The Military Accountant General revises these estimates, and consolidates them into one general military budget for the Indian Empire, which he lays before the Military Member of Council not later than 15th February. The Military Department forwards it about the end of February to the Finance Department.

Qq. 1215, *et seq.*, 316–20, 3514, *et seq.*

Appendix No. 86, pars. 40 and seq. Vol. III.

Q. 3511.

Q. 311.

Q. 3515.

Consultations have previously taken place between the Commander-in-Chief, the Military Member, and the Financial Member, on increases or reductions of the military estimates. By far the largest part of army expenditure is fixed and ear-marked under existing regulations for pay, pension, food, clothing and other services. The balance, therefore, in which, apart from extraordinary measures, reductions affecting the year's finance may be made, is comparatively small. If in these discussions a difference should arise between the Commander-in-Chief and the Military Member on the one side, and the Financial member on the other side, it must be decided by the Governor General in Council. The Military Budget is subsequently discussed in the Executive Council of the Governor General, and it is laid, as part of the general budget of the State, before the Legislative Council. Finally, the Governor General, in his Executive Council, appropriates the money which it provides to the various services named in the Budget, and the Finance Department returns the Military Budget to the Military Department as approved and appropriated.

Q. 3545.

Q. 1232.

Military Expenditure.

49. 2.—*Issue and Expenditure.*—The Military Department, having received the approved budget, informs the Controller in each Command of the sum appropriated to the Command, and to the different services within the Command, and the Controller notifies to each disbursing officer the monthly sum for which that officer may draw upon the civil treasury chest in order to defray the charge of the service committed to him, informing the Civil Accountant-General of the order so given. The officer in charge of each civil treasury chest learns in his turn from the Civil Accountant-General the amount to which he may honour the drafts of the military disbursing officers upon his chest. If money is required by a disbursing officer in excess of this monthly assignment, he applies to the military Controller for an extraordinary assignment, and if the service is very urgent he may apply to the officer in command of the station, who gives a provisional authority, informing the Controller of his act. It may be mentioned that military pensioners used to be paid by military officers, who went on circuit for the purpose. Now, however, as a rule, pensioners have to present themselves at the civil treasuries, and they are paid by the treasury officer, who compares the pension certificate with a descriptive roll in his possession.* The pensions payable to native soldiers amount to a large sum, about Rx. 720,000 a year, and it is evident that great care is necessary, in making these minute payments to individuals, to prevent personation. The military authorities, however, appear satisfied with the working of the arrangements, and do not suspect fraud. The statistics of pensions are reviewed from time to time to see how far the actual mortality corresponds to the mortality anticipated by the actuarial calculations of the Military Department. It will be remembered that military pensions at home are largely paid by means of post office orders, an arrangement in principle analogous to that of India. In both instances the military authorities must be responsible for watching closely the operation of regulations which might, it is evident, be much abused.

Q. 1237.

Q. 1302.

Q. 1468.

The Military Accountant-General at Calcutta keeps a watch over the progress of military expenditure. He receives from the Controllers in the different Commands about the 10th of every month a preliminary statement of army expenditure in each

Q. 1397.

* In some parts of India pensioners are paid through the Post Office.

Qq. 362, 3533. Command during the preceding month. Further details follow about the 20th, and a fairly full account on the 26th. On the other hand, he receives from the Comptroller and Auditor-General in the Finance Department at Calcutta a copy of the returns of issues from the Civil Treasuries to military disbursing officers, and an examination of these various statements enables him to give from time to time to the Military Member of Council a fairly early and correct estimate of military expenditure. We are informed that in the case of the Chitral Expedition the estimates so framed Q. 389. proved trustworthy. The Military Department receives from the Comptroller and Auditor-General the state of the Army audited account from time to time. This account is complete about 10 weeks after the expiry of the period to which it relates. Before the 31st December the military Controllers draw up from the accounts in their offices statements of the military receipts and expenditure in their Commands during the preceding financial year, and submit them to the Military Accountant-General in time to allow him to put in order and consolidate the information from each Command, and to forward them to the Comptroller and Auditor-General for insertion in the Finance and Revenue Accounts.

Q. 3566. Lastly, the head of each Military Department draws up reports on the administrative and financial work of his department during the year. We are told that the financial reports which are laid before the Government of India would record any notable irregularity; and that both the administrative and financial reports are presented to, and are analysed by, the Military Department.

The sums issued and expended under these regulations are very large. The military budget of the Bengal Command amounted in 1895–6 to Rx. 5,168,603, that of Bombay to Rx. 3,403,436, that of Madras to Rx. 3,394,789, that of the Punjab to Rx. 6,153,284. The military budget of the Indian Empire for the same year, therefore, amounted to Rx. 18,120,112 (gross), exclusive of expenditure in England and expenditure on military works.

II.—Conclusions.

I.—*Financial System.*

System of account. 50. We have carefully examined and we have described at some length the regulations under which the financial administration of the Indian Empire is carried on. The district is the unit of administration. The revenue collected in the district is paid without delay into the district Treasury, and is then at once available for the public service. The district Treasury is thus put in possession of funds from which it defrays expenditure within the district, and revenue not needed for that purpose is transferred to Treasuries where funds are needed. This movement of funds formerly entailed a charge upon the State, but cheaper methods of transfer have of late years converted it into a source of profit. We find further that the system of account has been much improved since 1880. The district Treasuries render promptly statements of their receipts and issues, and by means of them the Financial Member of Council learns early in the month the total sums received and issued up to the close of the preceding month, and fairly complete and detailed information of income and expenditure up to that date reaches him by the close of the month. Thus the consolidated account *to the end of each month* of the whole income and expenditure of the State is completed in the Finance Department at Calcutta within a month or six weeks of the date to which the account refers, while the Finance Member of Council has warning earlier from preliminary reports, if at any point receipts are falling off, or if expenditure exceeds its normal rate.

51. The result achieved appears to us satisfactory, when we consider the immense extent of territory in which revenue is being collected and paid away. The early information derived from the preliminary reports, supported by the fuller information which follows without undue delay, enables the Finance Member of Council to keep his finger on the financial pulse. That is a main object of a sound financial system, and it is attained in India without excessive centralisation and without unnecessary delay. It differs, it is true, and considerably from the English system. The account of Indian revenue and expenditure is made up monthly, the details being collected gradually during the course of the ensuing month.

English and Indian Budgets. English system. 52. In England the central account of the State kept at the Treasury is made up daily, and the Chancellor of the Exchequer can obtain on any evening an account of his income and expenditure at the close of business on that day. That he can do so is due to the institution of the Exchequer.

The great Revenue Departments in London pay daily into the account of the Exchequer at the Bank of England all the revenue which they have collected in London or received from the provinces, reserving only a certain margin. The Treasury issues daily, under certain safeguards, *imprests* from the Exchequer account to the spending departments. These Exchequer receipts and issues form the basis of the Budget, and they are recorded in the central Treasury account which is made up, as we have described, daily.

The English Budget is, therefore, based not upon the revenue actually received, and upon the expenditure actually defrayed, but upon these receipts on account and imprests. The Exchequer system here is of immemorial usage, it is well understood by those who study finance, and it enables the National account to be made up at any moment. Its promptness is its recommendation. Accounts laid later before Parliament enable comparison to be made between the receipts and issues as shown in the Exchequer account, and the revenue actually received, and the expenditure actually defrayed in the year, and Parliament is content to leave examination of differences to the Committee of Public Accounts. Experience, however, shows that those differences are not usually material, or such as to mar the substantial correctness of the Exchequer account.

Indian system.

53. The Indian system is different. The Budget there is based upon revenue to be actually received and expenditure to be actually defrayed within the year, and the accounts have reference to these actual results. The process of ascertaining them is necessarily slower, but the system itself is sound, it is adapted to the financial machinery in force, and it is sufficient, as far as we can judge, for practical purposes. A comparison of the two systems is, therefore, interesting, but it does not imply or suggest that a change in the Indian system is needed. One inconvenience, as we venture to think, does attend the Indian system. The Budget is, of course, the standard by which the progress of finance during the year is measured. The Indian Budget is opened before the close of the financial year, and the results of the completed year cannot, therefore, be given. Hence, it becomes necessary to frame a revised estimate for the expiring year. This revised estimate contains about ten months of actual revenue and expenditure, with an estimate for the remaining two months of the year. Within a comparatively short time from the close of the year the account of the actual revenue and expenditure for the whole year is completed. The completed account often varies considerably from the revised estimate.

Budget statements.

There are thus three statements before the public, viz., the Budget estimate, the revised estimate, and the completed account, all of these relating to a single year's finance. Financial statements issued for general use should be as simple as possible, and a number of statements relating to the same period, but varying in their figures, no doubt tend to embarrass the public.

54. In England the Chancellor of the Exchequer opens the Budget, as a rule, after the close of the financial year, and he has then only to compare the Budget estimate with the completed Exchequer account. He has no need of a revised estimate. We think the revised estimate in India an inconvenience, although an unavoidable inconvenience under present arrangements. It could only be avoided by changing the period of the financial year, or by postponing the Budget until the middle or end of May.

Control of revenue.

55. We called attention in paragraphs 23, 24 and 25 to a difference in the powers of control which the Chancellor of the Exchequer and the Financial Member of Council can respectively exercise over questions of revenue. In India the revenue authorities are not concentrated in Calcutta as they are in London, and they are not subject to the Financial Member as the English revenue authorities are subject to the Chancellor of the Exchequer. The Financial Member, therefore, cannot command expert assistance at head-quarters in the same degree as the Chancellor of the Exchequer. Financial Members of Council who gave evidence before us had not, as they thought, suffered practical inconvenience from the want. It is, however, clear that the presence at hand of the highest expert authorities must be a real advantage to a Finance Minister when he is dealing with questions of such supreme importance as the taxation of the people. The Indian system is well adapted to the requirements of India, and we are not suggesting a change. We merely note the point in passing, because it is one of interest when the relative powers of the Chancellor of the Exchequer and the Financial Member of Council are taken into consideration.

We have not learned that the Provincial Governments or the heads of Imperial Departments are under instructions to furnish the Finance Minister at fixed dates with

explanations of increase or decrease in receipts, or with comments and forecasts, as the progress of events may seem likely to modify the original budget estimate.

2.—*Financial Control.*

56. In examining the principles which regulate the administration of public expenditure, the first and most important question is the character and extent of the financial control vested in the Finance Minister. The system of financial control established in the United Kingdom is probably more complete than in any other country, and the powers of the Chancellor of the Exchequer therefore afford a convenient basis for comparison with the powers of the Financial Member of Council in India. The assent of the Treasury at home is required to every measure increasing or tending to increase the public expenditure. The power of withholding assent which this definition of financial control implies, is exercised subject to the overruling decision of the Cabinet, and, of course, to the directions of Parliament. The Chancellor of the Exchequer must be informed beforehand of proposals increasing or tending to increase the public expenditure so that he may have time to form his own judgment upon them, and, in important cases, to submit his conclusions to the Cabinet before a decision is taken.

Three Governors General of India and three Financial Members of Council have described to us the position and powers of the Financial Member of Council in India, and we may classify their evidence under the following heads:—

(*a.*) The theoretical powers of the Financial Member.
(*b.*) His practical powers.
(*c.*) His relations to other Departments and to the Executive Council.
(*d.*) His relations to the Viceroy.
(*e.*) His relations to the Secretary of State.

(*a.*) *The Theoretical Powers of the Financial Member.*

57. Sir David Barbour and Sir Auckland Colvin think that the powers of the Financial Member correspond generally to those of the Chancellor of the Exchequer, that it would be difficult to give him more theoretical or formal power than at present, and that he has ample opportunity for impressing on his colleagues the probable bearing on finance of any measure placed before them. Lord Northbrook, Lord Ripon, Lord Lansdowne, and Lord Cromer hold very much the same view, that the power of the Financial Member is theoretically complete.

(*b*) *The Practical Powers of the Financial Member.*

58. Upon this point there is a difference of opinion among the witnesses. Sir David Barbour and Sir Auckland Colvin think that the practical power of the Financial Member has been somewhat impaired. Sir Auckland says "since the events of 1885 Q 2924. "and the establishment of the Russian power in Central Asia, the balance of influence "between the Financial Member and the other Members of Council, more especially, I "should say, the Military Members, has been radically disturbed by the very great "preponderance given to military considerations in consequence of the apprehen- "sions raised in the minds of British officials in India." He adds that anyone whose experience of the post of Finance Minister dated before 1885 would scarcely be in a position to understand how great the disturbance has been in the balance in finance. But this does not point so much to diminution in the official authority of the Financial Member, as to the fact that a change of circumstances has caused greater weight to be attached to military considerations on the part of the Government as a whole, and neither Sir David Barbour nor Sir Auckland Colvin have suggested means by which the control of the Financial Member could be advantageously increased. Lord Cromer thinks that the Financial Department does not occupy the same predominant position Qq. 13,580–10. in India that the Treasury does in England. He attributes this in part to the fact that the Chancellor of the Exchequer has Parliament behind him,—an opinion which Qq. 1823, 14,028, 16,172. Lord Northbrook, Lord Ripon, and Sir David Barbour appear to share. Lord Cromer, Lord Lansdowne, and Lord Ripon think that, in practice, much depends upon the personality of the Financial Member. Qq. 13,510, 15,813, 16,173. Lord Cromer, Lord Northbrook, and Lord Ripon held office before 1885; but Lord Lansdowne, commenting upon Sir Auckland Colvin's observation as to the change since 1885, says that comparisons of that sort require to be made with very great care and discrimination, and that if there has been a tendency, at one time more than another, to liberal, or too liberal, expenditure, Q. 15,820. it was due, not so much to the peculiar character of the individuals concerned, as to the events which were passing at the time, and the conditions under which the government of India was being carried on.

(c.) The Relations of the Financial Member to other Departments and to the Council.

59. Sir David Barbour and Sir Auckland Colvin think that Members of Council are occupied with their own Departments, and that the Government as a whole does not give sufficient attention to the probable financial results of the measures which they adopt. On the other hand, Lord Cromer, Lord Northbrook, Lord Ripon, and Lord Lansdowne repudiate the view that the Council consists merely of heads of Departments engaged in forwarding the business of their Departments. They hold that the Council, like the Cabinet, is responsible for the government of India as a whole, and that the Members of the Council generally have a due sense of the importance of finance. Qq. 1928, 2909.

Sir David Barbour, in support of his contention that more continuous attention should be paid by the Council to the peculiar conditions of Indian finance, points out that there are great fluctuations in Indian revenue, and that India is really a continent, not a country. It has periods of great apparent prosperity, followed by periods of great depression. The tendency of the Council is towards expenditure, and in times of prosperity Members of Council forget the depression which will probably follow, and go too fast. He thinks that it would be better for the country if progress were more slow and regular, and more steady. Q. 13,543. Qq. 1928-9.

(d.) The Relations of the Financial Member of Council to the Viceroy.

60. Sir David Barbour says:—"To understand the Indian system of government, you "must realize the very great power of the Viceroy. As a rule the Department which "secures the support of the Governor-General on big questions would carry the day. "If the Viceroy supports the Military Department, the Military Department is the "strongest. If he supports the Financial Department, the Financial Department is "the strongest, and whether great attention is paid to financial considerations or not "depends entirely, or almost entirely, on the Governor-General for the time being. "If he is favourable to economy, the Government is economical; if he is inclined "to be —not extravagant but—liberal, we will say, the Government is liberal." Sir Auckland Colvin, Lord Cromer, Lord Northbrook, Lord Ripon, and Lord Lansdowne are all agreed as to the great power of the Viceroy, and Sir Auckland appears to think that the removal of provincial administration from the central Government leaves the Viceroy more at liberty to devote himself to Imperial questions—a result, in his opinion, not favourable to economy. Lord Cromer observes that, if the Viceroy takes the side opposed to the Finance Minister, the power of the latter is very much impaired. He says that no rules of office could give the Finance Minister a check over expenditure in opposition to the Viceroy, just as rules would not help the Chancellor of the Exchequer in England if his colleagues were against him; that it is the tendency of his mind, and he thinks of almost everybody who has been behind the scenes in India, that it would be unwise to impair the power of the Viceroy. He adds that, in his opinion, the power of the Viceroy in India is probably greater than that of the Prime Minister here; and that the Viceroy gives a certain unity of action to all the Departments. In illustration of Lord Cromer's view, we may observe that the Secretaries of the different Departments have direct access to the Governor-General, and transact business with him, so that he becomes the active head of the whole administration. There can be no question, therefore, that the opinion of the Viceroy is a most potent factor in Indian administration. It must not, however, be forgotten that questions in the Executive Council are settled by the vote of the majority. Qq. 1856, 1869. Q. 13,538.

(e.) The Relations of the Financial Member to the Secretary of State.

61. Both Sir David Barbour and Sir Auckland Colvin regard the Secretary of State, as an ally and as an economical element in the government of India, but Sir David is of opinion that there is a want of close touch between the Financial Department in India and the controlling financial authorities at home. Qq. 1853, 2932.

Lord Cromer agrees that the Secretary of State is the natural ally of the Financial Member of Council, but from his own experience he found the action of the Secretary of State more useful in small than in great things. It was useful to be able to refer a claim to the distant authority, but he regards with a certain amount of dislike anything which would transfer the powers of government from India to England. The general tendency should, in his opinion, be rather to endeavour to govern India more in India, not more from England, on account of the great liability of a governing Q. 13,571.

power in England to mistakes, not from any sort of intention, but simply from want of knowledge of facts. On that ground he has doubts as to the suggestion put forward by Sir D. Barbour that the Council of the Secretary of State might be strengthened by the addition of financial experts.

We received much evidence on the subject of communications between the Financial Member and the Secretary of State. Any Member of Council can record his dissent from a measure, and that dissent would be laid before the Secretary of State; but the objections of Members of Council may be recorded less formally in a despatch to the Secretary of State; and it was mentioned that the Financial Member frequently corresponds unofficially with Members of the Council at home and with the Financial Secretary in the India Office. The latter communications would not be seen by the Viceroy, but they might reach the Secretary of State. The question arose whether the Financial Member and other Members of Council might not have liberty to state their own views on a question in a confidential memorandum which should pass through the Viceroy to the Secretary of State. Sir Auckland Colvin does not seem to think that other communications than those now in use are needed. Sir David Barbour does not think that the formal "dissent is sufficient." Lord Cromer thinks there is force in the objection that dissent is a very formal mode of bringing forward objections. In his time it was a power rarely used. He says that if there is the least difficulty about the Secretary of State obtaining the views of a Member of Council in India, the latter should have power to write a confidential memorandum; and he points out that in the Diplomatic Service a Minister marks a paper to the Foreign Office as confidential, and writes with all the freedom of a private letter. It is very desirable, he thinks, that the same right should be allowed in India, in order that the Secretary of State may be fully informed if a Member of Council disagrees with the Viceroy, or with any of his colleagues, or with the Secretary of State himself. No communication, however, should be sent to the Secretary of State unknown to the Viceroy. The writing of letters between subordinate officials is not, in his opinion, a good way of carrying on business.

Lord Northbrook agrees generally upon this subject with Lord Cromer; Lord Ripon does not object to it. On the other hand, Lord Lansdowne dissents. He sees no occasion for the suggested change, and feels confident that its introduction would weaken the position of the Viceroy.

Recommendations.

Theoretical power of control.

62. On the first point, we think that the agreement among the high authorities whom we have quoted shows that, so far as regulations can establish a sound financial control, the system in India is theoretically complete.

Practical power of control.

63. On the second point we agree with Lord Cromer, that the Financial Department in India cannot hold a position similar to that of the Treasury in England. The post of Financial Member of Council has only existed for forty years, and no tradition of power attaches to his Department. From time immemorial, a certain pre-eminence has been accorded to the Treasury. The Treasury inherits the traditions and the powers of the old Lord High Treasurer, and since the establishment of Parliamentary government in its present form, the Prime Minister has, as a rule, presided over the Treasury. Moreover, the assent of Parliament must be obtained to an increase of taxation, and the Cabinet is aware that it will have to encounter in Parliament objections similar to those which the Chancellor of the Exchequer advances. The Financial Member of Council in India has not the same support behind him. Much, no doubt, depends both here and in India, on the personality of the Finance Minister. If the views of the Viceroy accord with those of the Financial Member, the influence of the Finance Department is secured; but if the contrary is the case, the position of the Financial Member is comparatively weak. Men of the experience of Sir David Barbour and Sir Auckland Colvin can hardly be mistaken in their observation that military opinion has been powerful since 1885, though they may under-estimate the force of the reasons which have given it weight. Lord Lansdowne, who was Governor-General since 1885, rightly points out that such comparisons require to be made with very great care and discrimination, and that if there has been a tendency at one time more than another to large expenditure, it has been due, not so much to the peculiar character of the individuals concerned, as to the events which were passing at the time, and to the conditions under which the Government of India was being carried on. Nor must it be forgotten that of late years military expenditure has largely increased in all great States, and that other

finance ministers besides those of India may make the same complaint. When questions of national defence, or, it may be, of spirited policy, have gained the public ear, financial considerations lose weight, not only in India, but elsewhere, and the balance can only be restored if, and when, the public ceases to demand large expenditure. We are not, therefore, surprised to find that Sir D. Barbour and Sir A. Colvin have no practical suggestions to make. But, after making due allowance for the forces which work for expenditure, there is good and just reason for the anxiety which Indian Finance Ministers entertain. Indian statesmen generally agree that difficulty and risk attend increase of taxation in India, and we shall have to show that the fall in exchange and the rise in military expenditure have made it necessary, since 1885, to re-impose the taxation imposed after the Mutiny and remitted during a period of less pressure. It is more important in India than in self-governing countries that the financial coat should be cut according to the cloth.

Relations of Financial Member with other Departments.

64. On the third point Sir D. Barbour and Sir A. Colvin, as Finance Ministers, are keenly alive to the evils of large expenditure, and, if they are overruled in Council, they may not unnaturally think that sufficient attention has not been given to their representations; but we must accept the evidence of Lord Cromer, Lord Northbrook, Lord Ripon, and Lord Lansdowne, as showing that the Members of Council fully understand and recognise their collective responsibility on financial questions.

Sir David Barbour, in arguing that the Members of Council should pay more attention to finance, pointed out that in India periods of depression followed periods of prosperity, and he pleaded for steadiness in finance. We understand him to mean that in time of prosperity surplus revenue should not be given away in full, but that a safe reserve should be maintained. We concur with Sir David, and we test the course of Indian finance by that rule of administration. In the interval between 1862–3 and 1895–6, a period of 34 years, India passed through one great war. She incurred large expenditure on little wars, and she suffered from two famines. Nevertheless, she has been able to meet this extraordinary expenditure without adding to her ordinary debt (as distinguished from her productive debt).

But this is not all. In the course of this period she has been able in addition to reduce her ordinary debt by 24 per cent. She has also maintained since 1881 a budget provision for famine relief and insurance, which has averaged Rx. 1,100,000 a year, and which now stands at Rx. 1,500,000. This famine provision is simply a standing surplus of income over expenditure, a permanent reserve so long as it is maintained. Thus the Government of India may fairly plead that the sound rule of action recommended by Sir D. Barbour has been observed during the period since the Mutiny.*

Sir David Barbour would probably argue that this reserve should be larger, and without pre-judging the considerations which would support reductions of taxation, we think that there is much to be said in favour of maintaining a considerable permanent reserve which in ordinary times could be appropriated to capital expenditure on public works and to reduction of ordinary debt.

Relations of the Financial Member with the Viceroy.

66. On the fourth point, the power of the Viceroy is the predominant factor in the system of Indian administration. If he should not give sufficient weight to financial considerations, a check can only be found in the Secretary of State in Council.

Relations of the Financial Member with the Secretary of State.

67. On the fifth point, we agree with the witnesses who hold that the Secretary of State is the "ally" of the Finance Member of Council. It is, therefore, desirable that he should have full opportunity of having the views of the Financial Member unreservedly expressed. Lord Cromer suggests that for this purpose the Financial Member (in common with other Members of Council) should be at liberty, if he wishes it, to state his opinion in a confidential memorandum which should not be published without his consent, but should be forwarded through the Viceroy to the Secretary of State. We think that the suggestion deserves favourable consideration.

3.—*Military Representation in the Council.*

See paragraph 44.

68. In the course of the evidence tendered to us, reference was made to the fact that two out of the seven members who constitute the Council of the Governor

* In our Report we have dealt with a period ending with 1895–6, because the finances of the following years were deranged by the late famine, but we observe that the Government of India anticipate that the surpluses of the expired and of the current year will cancel the deficit of the two famine years. In that case, our remarks will apply to the whole period to 1900, including the famine expenditure.

General are military men; and it was contended by Sir David Barbour and Sir Auckland Colvin that the military element had in consequence somewhat disproportionate weight in the Council. It was argued on the other side that the Military Member of Council is a check on the Commander-in-Chief. It is not difficult to reconcile the difference of opinion thus expressed by the most competent and experienced authorities. We are satisfied that the Military Member, both in theory and practice, acts as a check upon army expenditure by examining the proposals of the Commander-in-Chief critically and in the interest of economy; but his criticism, like the proposals themselves, has regard to details, and not to policy. The military policy of India, both as regards army organization and warlike operations, is determined by the Governor-General in Council, subject only to the sanction of the Secretary of State; and it may well be that the Finance Member, alarmed at the probable financial result of a particular policy, may object to the policy itself, and to all that its adoption entails. From this point of view he may not be satisfied when his colleagues do not agree with him, and may not unreasonably think military opinion too predominant in the Council. On the other hand, questions in Council are decided by a majority of those present, and, as Sir James Westland remarks: "If the "Financial Member finds himself in an absolute minority, he may reasonably "consider that there is something to be said for the other view." We were informed that the late Lord Lytton, when Governor General, thought that the Commander-in-Chief should not be a Member of Council, and the Commission presided over by Sir Ashley Eden on Army Organisation in India made a recommendation to that effect. Lord Cromer, Lord Northbrook, and Lord Lansdowne were opposed to change. We do not consider that a proposal affecting the constitution of the Executive Council of the Viceroy falls within our order of reference, and we therefore only record the views laid before us by high authorities.

4.—*The Financial Year.*

69. In paragraph 53 we spoke of a certain inconvenience in the number of estimates, due to the fact that the Budget in India is usually opened before the conclusion of the financial year. We think it worthy of consideration whether, in the circumstances of India, it would not be preferable that the financial year should end on the 31st December. In that case, if the Budget were opened in March, the actual result of the expired year might take the place of the revised estimate which is now presented. A change in the financial year has been more than once mentioned in the House of Commons, in order that the Indian accounts might be laid before Parliament at an earlier date, and an earlier discussion of Indian finance thus be made possible.

5.—*Revenue Returns.*

70. We stated in paragraph 55 that we had not learned that the Provincial Governments and Imperial Departments responsible for the collection of revenue are under instructions to furnish reasoned returns at fixed dates to the Financial Member of Council, as is the case at home. We should have thought it for the convenience of the Financial Member that such returns should be made, but the Financial Member of Council is the best judge of his requirements.

III.—The Audit of Public Accounts in India.

71. The audit* of public expenditure constitutes so important a branch of financial administration that we describe the Indian system in some detail. We begin with the audit applied to Indian expenditure by the central audit office at Calcutta through its officers in the provinces. A description of the detailed audit of expenditure in the Department of Public Works, and in the Military Department, will follow.

---

* In 1886 Sir James Westland drew up a Memorandum on the cost of audit in India. He said it was not possible to give a direct answer to the question what is the cost of audit and account in India. The cost of the various account offices could be stated, but in every case the functions they fulfil would include a very great deal more than mere work of audit and account. He gave the cost of the account offices themselves, without any separation of their functions at Rx. 416,300, together with some part of the expense of the office of the Comptroller and Auditor-General, but, he added, the Comptroller-General and his office are to a greater extent than any other office engaged in work which is not purely account and audit.

The cost of the office of the auditor of the accounts of the Secretary of State in Council, that is of the audit of the India Office expenditure is between 6,000*l.* and 7,000*l.*

The central treasury of India is, as we have shown, charged with the gross revenue and the gross expenditure of the Empire. Thus the whole public expenditure falls within the general rules of accountability prescribed for the conduct of the public service.

1. *Audit by the Civil Accountants General in the Provinces.*

72. The chief auditor of the Indian Empire is the Comptroller and Auditor-General, a high officer of the Central Finance Department at Calcutta. The actual audit of expenditure, however, takes place, not in Calcutta, but in the provinces where the expenditure is incurred. India, it will be recollected, is divided into eight Provincial Governments. In each Government the chief auditing officer is the Accountant General.* He is a subordinate of the Comptroller and Auditor-General, and he represents the Central Finance Department in the province. As chief auditor he has under him examiners and their subordinates, who are stationed at the headquarters of the province. The officers in charge of the District Treasury Chests send at the close of each month to the headquarters of the province an account with vouchers of their receipts and issues during the month. It has been explained that the whole of the Indian expenditure, whether it be that of the Central Government or that of the Provincial Governments, is paid through the district treasuries. Thus the whole of the public expenditure in the province comes before the auditing officer at the headquarters of the province. So far as these issues are for military purposes or for public works, including telegraphs, they are, in the main, imprests, and the Accountant-General of the province, with whom we are now dealing, has only to see that issues are made to duly accredited officers of the Military and the Works Department, or on their orders, and are within the credits assigned to those officers. The detailed audit of this expenditure is applied by the auditing officers of the Military and Works Departments respectively. The same remark applies to issues to the Post Office and Forest Departments, but the Accountant-General audits in detail all the issues for civil administration, whether Central or Provincial. Immediately after the close of the month, officers charged with civil expenditure send their accounts for the month with vouchers to the headquarters of the province.† The Accountant-General then begins his audit. His officers are guided and bound in their work by a minute and exhaustive code of regulations, and they disallow items which are insufficiently vouched, which are not covered by proper authority, or are otherwise not in accordance with Act or regulation. The disbursing officer has, of course, opportunity for explanation, and the Accountant-General accepts or rejects the explanation. If the Accountant-General rejects the explanation, he orders recovery of the money wrongly disbursed, and the Treasury officer is bound to enforce the recovery. If, however, the person from whom the recovery is to be made appeals to the local Government, and that Government supports him, recovery may be suspended pending a reference to the Government of India. All objections which are raised by the auditing officers are entered in a book, and the Accountant-General is specially enjoined to give attention to this book, which he formally reviews once a quarter. Any objection as to which the Accountant-General entertains a doubt is referred for decision to the Comptroller and Auditor-General. Cases in which the explanations offered satisfy the Accountant-General are not reported to the Comptroller and Auditor-General, but the book of objections is open to the inspection of the officers whom the Comptroller and Auditor-General sends to perform the test audit described in paragraph 81.

Q. 194. Q. 510. Q. 917.

Each account is audited by the middle of the month succeeding that to which the expenditure belongs, and the audited accounts are then submitted to the Comptroller and Auditor-General at Calcutta by the Accountant-General, who, if he thinks fit, attaches to it his own comments.

73. The audit is now practically completed, for doubtful questions have been decided, and doubtful charges have been finally allowed or disallowed by the auditing officers of the Province, with the exception of appeals by disbursing officers to the Provincial Government or to headquarters at Calcutta, and of special cases reserved for the decision of the Comptroller and Auditor-General.

The audited accounts reach Calcutta towards the close of the month following that to which the expenditure relates. About the same time the Comptroller and

* In the smaller provinces he is styled the Comptroller.

† This refers to payments made directly by disbursing officers. The vouchers for payments by the District Treasury on bills are sent directly by the District Treasury to the Civil Accountant-General.

Auditor-General receives from the Accountant-General of the Public Works Department, from the Forest Department, from the Post Office, and from the several Controllers in the Military Commands, the audited accounts of the expenditure, which they severally audit. He consolidates these various accounts into one general account for all India, which he lays before the Financial Member of Council in six weeks or two months after the expiry of the month to which the expenditure belongs. Thus the Financial Member of Council receives within two months from the expiry of each month, an audited account of the expenditure of all India for the financial year up to that date.

The Accountants-General make annual reports showing all outstanding objections, and explaining why they have not been removed, and the Comptroller and Auditor-
Q 2846. General reviews those reports and submits them to the Finance Minister.

The Comptroller and Auditor-General, within 12 months after the close of the financial year lays before the Financial Member and before the Government of India an "appropriation" report on the year's expenditure, embodied in the form of a
Q. 524. report, which is published in the "Gazette of India."

2. *Audit in the Public Works Department.*

74. The Examiner of Works at the Provincial headquarters is the chief auditing
Qq. 1570-98. officer of the Public Works Department, and the executive officers of that department send to him monthly their accounts and vouchers. The Examiner audits, under regulations laid down in the Public Works Code, the accounts as they are received, and disallows expenditure not authorised by the code; but the executive officers can appeal to their Provincial Chiefs or to headquarters at Calcutta against the Examiners' disallowance. The Examiner is required to report to the Accountant-General of the Public Works Department at Calcutta important objections which he may raise in the course of his audit. Such objections are reported even if the subsequent explanations of the executive officers have removed the Examiner's objection. When the monthly accounts have been passed, the Examiner draws up and sends to the
Works Code, Vol. 2. ch. 3, para. 98. Accountant-General of Works at Calcutta an audited account of the expenditure on works in his province during the month to which the account relates, and he accompanies it with a "divisional statement of objectionable items." TheAccountant-General of the Public Works Department at Calcutta compiles from these provincial accounts an audited statement of the expenditure on works in India during the month, and forwards it to the Comptroller and Auditor-General at the Audit Office in Calcutta, but he does not communicate to the Comptroller and Auditor-General the "divisional statements of objectionable items."

75. The Examiner in each province goes from time to time on a tour of inspection, and applies a test audit to the books in the divisional offices; moreover, the
Qq. 1618-9. Accountant-General of the Public Works Department at Calcutta applies a test from time to time to the work of his examiners.*

After the close of the financial year the Accountant-General of the Public Works Department prepares an appropriation account of the expenditure on public works, which is included, as far as necessary, in the general appropriation Report of the
Q. 432. Qq. 1607-10. Comptroller and Auditor-General.

Qq. 1620, 1629. 76. The Public Works Department is responsible for a large amount of stores, especially for railway works. The Examiner in each Provincial Government audits the store accounts, as he audits the cash accounts, of the Public Works department. In every September and March there is a survey of stores, and the Accountant-General of the Public Works Department at headquarters compares the result of the survey with the result of the store accounts. Control over work is exercised by a comparison
Qq. 1665, 1669. of cost with estimate, and it is stated that the result is generally satisfactory.

3. *Audit in the Military Department.*

77. The Controller is the chief auditing officer in each of the military Commands. He has under him a staff of examiners. Disbursing officers in the Commands send to the headquarters of their Command as soon as practicable after the close of each

* This test audit under the officers of the Provincial Head Quarters is so concerted with the test audit applied by the Comptroller and Auditor-General, as to subject every accounting officer to the test once in every 18 months or two years.

month the accounts and vouchers of their expenditure* during the month. The Examiners in auditing them are guided by the military account code, the rules of which are described by Sir E. Collen as minute and lengthy, and admitting possibly of simplification; by Sir O. Newmarch as voluminous, but not too minute. If an irregularity is detected, the Examiner states his objection to the disbursing officer, who offers his explanation. In case of a highly-placed officer, the Examiner asks the explanation through his chief, the Controller. If the explanation satisfies him, he passes the item. If he is not satisfied, he disallows it, and the disbursing officer must then make good in his next account the item disallowed, but he may appeal to his superior officers, even up to the Commander-in-Chief. The Commander-in-Chief, if he supports the appeal, refers it to the Military Member of Council, and, if necessary, to the Government of India, with whom rests the final decision. The objections of the Examiners are entered in a book. Sir E. Collen says that these objections give rise to much correspondence and that needless points are occasionally, not often, raised. If the authority of the Finance Department for a measure involving expenditure should not have been obtained, the Examiner must report the omission to his chief, the military Controller. If a serious irregularity should come to the knowledge of the Controller, he is bound to make it known to the Military Department, but it would not be reported by the the Government of India to the Secretary of State unless it were so serious as to require the removal of the offending officer, so that the power of the Government of India to deal with such irregularities is practically final. Grave frauds, for instance, occurred some years ago in Burma, which were reported to, and dealt with by, the Government of India, but were not reported home. Considerable power is reserved to the Examiner. He can require a reference to the Military Department at Calcutta, if his immediate chief, the Controller, should decide against him upon a question of disallowance. Sir E. Collen, however, tells us that he has never known such a case arise.

Qq. 1249, 3394. Q. 1355. Q. 3395. Q. 1366.

The Examiners lay before the Controller monthly the accounts which they have audited, but they do not send with the accounts a statement of the objections which they have raised in the course of their audit; and, as they decide themselves all but the most important cases, the Controller forms his opinion as to the completeness of their audit from the questions which they think fit to refer to him, or by the appeals from disbursing officers which may come to his knowledge. He tests, however, from time to time the work in the Examiners' offices, and he sends inspectors to visit the stations and inspect books and balances, and by this means he can test to a certain extent the action of Examiners in passing accounts. The Controller in his turn does not report to the Central Military Department at Calcutta the questions referred to him by the Examiners, or the appeals to him against disallowances by the Examiners, unless he thinks it necessary to take instructions upon them. Thus it will be seen that the Military Member of Council and his officers at head-quarters do not supervise the local audit of military expenditure applied in the Commands.† They do not know, except in a limited number of cases, the objections or questions which have arisen in the course of the audit. The audited accounts of the Commands are forwarded, not to the Military Department, but to the Central Audit Office at Calcutta, and the Military Department only receives a copy of the audited account from the Comptroller and Auditor-General. Further, the Controller in the Command corresponds on questions of audit and account directly with the Comptroller and Auditor-General, receiving directions from him, which are not, as a matter of necessity, communicated to the Military Department.

Qq. 3364, 1435. Qq. 1335, 1386.

78. After the close of the year, the Controllers prepare reports on the "appropriation" accounts of the military expenditure in their Commands, and send them to the Military Accountant-General, who consolidates them and sends the consolidated report to the Comptroller and Auditor-General. The Comptroller and Auditor-General in his turn embodies it in his general report on the appropriation accounts.

79. There is also an audit of military stores. The books and documents of the store establishments are forwarded to the Examiners at the head-quarters of the Command. This audit ascertains the stores which should be on hand. It does not verify the amount actually in hand. Sir E. Collen considers that it is a check on the labour employed and the materials used. There is a question whether the accounts of the factories should be sent, as now, to headquarters, or whether the audit should be

Store audit. Q. 3472.

* More than two-thirds of the military estimates are personal charges, which vary little from year to year (Q. 1342).

† We may remark that certain Examiners in the Bengal, Punjab, and Madras commands, are also disbursing officers, a function which is hardly compatible with that of an auditor. (Q. 1182).

applied by a staff of accountants on the spot. The officers of the manufacturing and store departments take stock from time to time and report losses; any great discrepancy is said to be rare. The Inspector-General of Ordnance in each Command makes a tour of inspection, and applies a test audit to the stores. He can write off sums up to 100 rupees in respect of losses on ordinary services, and up to 500 rupees in respect of losses on extraordinary services, but losses in excess of that sum must be reported to the Central Military Department at Calcutta. It should be added that an officer of the accounts branch of the Central Military Department is sent every year to the factories and arsenals, and he selects branches of stores for test investigation.

App No. 86, Vol. III.

4. *Audit in the Post Office and Forest Department.*

80. The accounts of the Post Office and of the Forest Department are audited locally much on the same principle as those of the Public Works Department.

5. *Test Audit.*

Test audit.

81. So far the audit, as we have described it, is local and applied by local officers, the Comptroller and Auditor-General receiving and consolidating the results. But although the Comptroller and Auditor-General deals with the accounts then submitted to him rather as an accountant than as an auditor, he exercises, nevertheless, a power, which makes him an auditor in the true sense of the term. He institutes from time to time a "test" audit. That is, he deputes certain of his own officers to go into the Provinces and Commands, and examine in detail the accounts of a portion of the Civil expenditure, of the Public Works, the Military, and the Post Office expenditure; and he receives from those officers reports on the results of their examination. These reports, with the comments of the Comptroller and Auditor-General upon them, are laid by him before the Government of India. It is stated that the test represents about a month out of the year's expenditure.

Q. 556.

The value of such a "test" audit cannot be overrated. In proportion as it is widely and frequently exercised, the Comptroller and Auditor-General can form a judgment as to the efficiency of the local audits, and can ascertain, within limits, whether order is observed in the conduct of financial business. We do not understand that at present the results of these "test" audits are brought to public notice.

6. *Summary.*

82. We are anxious that our remarks should not be read as questioning the sufficiency of the system of audit in India; but we are anxious also to make clear the distinction of principle which exists between the system adopted in England and the system adopted in India. For many years the principle of an effective audit was carefully discussed at home, and the present system was introduced step by step. The last step made the audit power altogether independent of the executive power. This decision gave the force of law to the principle which English statesmen considered sound. A different principle has been adopted in India.

English system.

83. The system of audit in England is highly centralised, the system of audit in India is to a great extent local and decentralised. The Comptroller and Auditor-General in England is considered a judicial officer, that is to say, he holds his office during good behaviour. He is only removable on address of the two Houses of Parliament, and his salary, like that of a judge, is charged by Act upon the Consolidated Fund, and is not therefore dependent upon an annual vote of the House of Commons He has no executive function. He audits by his own officers and in detail the whole of the civil expenditure. He accepts the departmental audit of the War Office and Admiralty so far as examination of vouchers is concerned, but satisfies himself by his own officers stationed in the War Office and Admiralty that the expenditure is duly authorised and correctly charged to the proper head of service. He, however, tests the correctness of the departmental audit in those two great departments by examining yearly by his own officers and in detail certain branches of expenditure which he selects for the purpose. His appropriation reports are made to the House of Commons, and a Committee of the House of Commons examines and practically passes them. He further applies a test examination to the accounts of the receipt and issue of stores, naval, military, and civil, and to the Dockyard accounts of the Navy, and the manufacturing accounts of the Army. He thus ascertains that the stores and materials purchased have been duly accounted for, and that they have been expended upon the objects for which Parliament intended to provide.

Indian system.

84. The Comptroller and Auditor-General at Calcutta is the chief auditor of the Indian Empire. He is a civil servant, and holds his office subject to the same

conditions as other civil servants. His office is in the Treasury building, but he has an establishment distinct from that of the Treasury. He has under him one Deputy-Comptroller, his subordinate in executive duties, and two Deputy-Auditors-General who are employed solely on inspection and test audit, and some 200 subordinate officers and clerks employed partly on executive and partly on audit work. He is charged with mixed duties partly executive and partly audit. As an executive officer of the Finance Department he undertakes many duties which would be discharged in England by the Secretary to the Treasury. "He is responsible for the movement of funds, that is, he sees that money sufficient, but not more than sufficient, for the public service is in hand at the numerous district treasuries throughout the Empire. He is responsible for the management of the National Debt, and he is also head of the Mint and Currency Departments. He reviews the estimates of expenditure and consolidates them into the budget which bears his signature. In the discharge of these duties he advises and acts under the directions of the Finance Minister. He may be said to represent the Treasury at Calcutta, when the Financial Secretary accompanies the Government to Simla. Thus the executive duties of the Comptroller and Auditor-General are important, and must occupy much of his official time.* Q. 93. Q. 97. Q. 110.

85. Passing to his audit duties, we note that he does not personally supervise and watch the local auditors in the execution of their audit duties. He can only form an opinion upon the manner in which they discharge their duties from the appeals against the decisions of the local officers which may come to his knowledge, from the result of the test audit, and from the special cases reserved for his decision. We learn that the questions so reserved, whether by his own Accountants-General or by the auditing officers of other departments are not numerous. He accepts, under these conditions, the results of the departmental audits throughout the Indian Empire, and consolidates them into one general appropriation account, which he submits with a report to the Governor-General in Council. The audit of the Comptroller and Auditor-General in India resembles in its general features the audit applied by the Comptroller and Auditor-General at home to the expenditure of the Army and Navy, but it differs in this important respect, that the appropriation account and his report thereon undergo no examination or review by an independent body, such as that which the appropriation accounts of the Comptroller and Auditor-General at home receive from the Public Accounts Committee of the House of Commons. Audit in India.

86. The audit of the district treasuries and of the civil expenditure is conducted in the Provinces, and by officers of the Comptroller and Auditor-General, viz., the Accountants-General of the Provinces. These officers are independent of the Provincial Governments whose accounts they audit. They are independent of the Departments of the Central Government, whose accounts they audit, except so far as that audit involves acts of the Central Finance Department. The accounts of military expenditure, of expenditure on public works, and of post office expenditure, are audited by officers belonging to and dependent on those Departments. These officers raise and decide questions of disallowance and irregularity, and the questions and decisions thereon are not reported to the Comptroller and Auditor-General. So far as concerns the accounts rendered to him by the local auditing officers belonging to the different departments, he is an accountant rather than an auditor. He compiles rather than audits the final accounts of expenditure prepared for the Central Government and for the Secretary of State. District treasury audit.

87. It appears to us that the departmental audit in India is well organised and effective. It accompanies or follows closely the expenditure to which it applies, and the Comptroller and Auditor-General is able within two months or so from the expiry of each month to lay before the Financial Member of Council an audited account of the expenditure of all India for the expired portion of the financial year up to that date. The promptitude with which the audit is conducted and consolidated into one account for the whole of India is in our opinion highly commendable. This audit is conducted by departmental officers, and departmental officers are not independent of the executive government in the sense that the officers of the Comptroller and Auditor-General at home are independent. We do not, however, lay stress upon this point, because we think that the object of the independent audit can be satisfactorily attained by the test audit applied by the Comptroller and Auditor-General. A record of objections raised by the auditor, and of the decisions given thereon, is kept in the auditing branches of the Accountant-General and of the Public Works Examiners in the province, but the record arrangement in the Military Department does not appear to be so complete. We think that a uniform rule should be established throughout the service for the record of the objections and queries which have been Departmental audit.

* *See* Sir James Westland's remark in note to paragraph 71.

raised by auditing officers. Records of objections taken by the local auditors are of service to the local heads of departments, and to the officers employed by the Comptroller and Auditor-General on the test audit, and they should be of service to the Comptroller and Auditor-General himself, as showing the manner in which the departmental auditors discharge their duty.

Test audit.

88. We attach a great value to the test audit. It appears to us that, if applied on a sufficient scale, it satisfies all the objects of an independent audit. We are informed that, as at present applied, it covers about one-twelfth of a year's expenditure. The Comptroller and Auditor-General is responsible for satisfying himself by means of it that the departmental audit is searching and effective, that satisfactory explanations of apparent irregularities only are accepted, and that irregularities not satisfactorily explained are always reported. Full discretion, subject to that understanding, should be left to the Comptroller and Auditor-General as to the extent of the test which he may consider it desirable to apply.

Independence of Comptroller and Auditor General.

89. On the question whether a change should be made in the terms of appointment and the duties of the Indian Comptroller and Auditor-General, we are divided in opinion. Some of us think that the Comptroller and Auditor-General should, as far as circumstances permit, hold his office on terms similar to those which Parliament has enacted for the Comptroller and Auditor-General of the United Kingdom; that he should be appointed the Secretary of State in Council; that his tenure should be similar to that of the judges of the Indian High Courts, and his rank and salary equivalent to those of a Secretary of Government; that he should be relieved of all executive functions, and that those functions, with the staff now employed upon them, should be transferred to the Finance Department. His own staff would then consist of the officers now employed in the examination and record of the accounts and reports received from the auditors of the different departments in the Provinces, and of the officers whom he employs upon his test audit. It appears that the Secretary of State and the Government of India have objected to the establishment of an independent Comptroller and Auditor-General, chiefly on the ground that increase of expenditure would be the consequence. Those of us who advocate the change described above think that this increase of expenditure has been over-estimated. It might be necessary to appoint an assistant secretary in the Finance Department to take over the executive duties now entrusted to the Comptroller and Auditor-General, but the staff which now discharges those duties under the Comptroller and Auditor-General should suffice to discharge them in the Finance Department. An increase is certainly contemplated in the pay of the Comptroller and Auditor-General sufficient to mark the importance of his independent office, but the staff which now discharges under him his audit duties should suffice for those duties in future, as no change is suggested in the departmental audit as at present established. If the Comptroller and Auditor-General should, in the exercise of his discretion, think it necessary to extend his test audit, he would require a larger staff. That, however, is a question for his discretion. Indian authorities appear to be satisfied with the extent of the present test, and if experience supports that view there would be no need for an increase in the number of officers.

Others of us do not concur in the views and recommendations stated above. They hold that, in the absence of anything in the evidence which supports these recommendations, the Commission is not justified in making a proposal which would impose a considerable new charge on the Indian taxpayer. They observe that all the evidence recorded on the subject is unfavourable to the proposal. Lord Cromer said that if there was any doubt on the matter, the Comptroller and Auditor-General might be made independent, but he added, "I should hardly think it is worth while incurring any expenditure for the purpose." Sir David Barbour expressed a similar opinion. He thought that the proposal would involve considerable expense, and he hardly thought that the advantage was worth the cost. Sir Auckland Colvin held that the independence of the Comptroller and Auditor-General and the auditing officers was practically sufficient. There is no evidence of the opposite purport. It is further observed that there is no evidence before the Commission of the prevalence of irregularities in the Indian audit. On the contrary the system is said in the report to be "well organised and effective," and the detection of irregularities appears to be more immediate and direct in India than in England.

Q. 13,629.

Q. 2158.

Qq. 3081–94.

It is asked, therefore, on what do these recommendations rest? The answer is, that they rest solely on the fact that the system which it is proposed to introduce in India has answered well in England. But this is to assume that what is suitable in England must necessarily be suitable in India. Now it is obvious that the circumstances of the

two countries are widely different. In England, the Parliament which votes Supplies, naturally asserts the right to exercise through the Comptroller and Auditor-General a check on the expenditure by the Executive Government of the Supplies voted. In India, the Supreme Government allots money to the Spending Departments, and already possesses in its Comptroller and Auditor-General and his Staff, an auditing agency independent of all the subordinate spending authorities. The whole subject has been carefully considered on two occasions in the last twenty years, and on both occasions the Secretary of State decided that recommendations similar to those now again put forward should not be adopted. The Government of India in 1881 was prepared to try the experiment at an extra annual cost of Rx. 15,300. But Lord Hartington did not consider that, in the circumstances of India, an independent officer of very high standing was necessary in addition to the existing establishment, and decided that the Comptroller-General should retain his executive duties along with those of Auditor-General. Lord Cross, in 1889, after further enquiry, confirmed this decision.

The members of the Commission who hold these views observe further that the administrative difficulties involved in the proposals have not been considered and would probably be serious. As the Report says, "the system of audit in England is "highly centralized, the system of audit in India is to a great extent local and "decentralized." The adoption of the recommendations would cause a great dislocation of a system which is admitted in the Report to be "well organised and effective." And, above all, it is most undesirable to adopt a measure which might suggest to the people of India that the Government of India requires to be checked in the auditing of its expenditure by an independent authority set up in India. On these grounds they are unable to support recommendations which would certainly increase expenditure, while they would, in their opinion, secure no compensating advantage.

We are therefore unable to make any recommendation on this subject.

Appropriation Report.

90. We think it would be well if the appropriation accounts of Indian expenditure and the reports of the Comptroller and Auditor-General thereon followed the form of the appropriation accounts which the Comptroller and Auditor-General of the United Kingdom presents with his certificate and comments to the House of Commons. It is a form approved by the House of Commons, and found convenient by the Committee of Public Accounts in their examination of expenditure under the various votes. We may notice that this form of account and report has been adopted by the auditor of the Indian home accounts. The change would, therefore, only mean the assimilation of the form used for expenditure in India to the form used for the expenditure of the Indian Government at home. It would certainly be desirable that this officer's Appropriation Report should embody the result of his test audit.

Examination at home of the audited accounts of the Indian Government.

91. It is essential to an effective system of audit that the audited accounts of public expenditure, together with the reports of the auditor thereon, should be examined and finally passed by an authority whose judgment has weight with the public. The accounts of the public expenditure of the United Kingdom are reviewed and practically passed by the Committee of Public Accounts of the House of Commons. The House of Commons, which grants the money required for the public service, satisfies itself by this means that its votes have been duly appropriated to the objects for which the grants were made. The reports of the Committee presented to the House of Commons make public the judgment which the Committee pass upon the accounts, and a minute of the Treasury published later shows how, and to what extent, the executive government has given effect to the recommendations of the Committee. Thus the system of account is complete from the first issue of an imprest from a grant of Parliament to the final discharge of the accountant on the recommendation of a Committee of the House of Parliament which made the grant. The system has been in operation for more than 30 years, and has worked to the satisfaction of the Treasury, that is to say, of the department which is responsible to Parliament for financial order, and also of Parliament. There can be no doubt that the knowledge that irregularities will be brought to notice, and will form the subject of comment by a Committee of the House of Commons, has a good effect throughout the public service. These final safeguards are wanting in the Indian system, and we think that they should now be constituted. The House of Commons, which grants money to the Crown for the public service, has a right to satisfy itself that its grants are properly expended. The House of Commons does not grant money for the service of India, and this distinction must be borne in mind. The Secretary of State in Council is the final authority on Indian expenditure, and he ought to be satisfied that expenditure in India has been duly and orderly governed. We think, therefore, that the appropriation

accounts, with the report of the Comptroller and Auditor-General thereon, should be forwarded by the Government of India to the Secretary of State in Council, and by him referred to a Standing Committee for examination. We think, further, that two members of this Committee should be unconnected with the India Office, and that one of them should be the English Comptroller and Auditor-General. The report of the Committee, together with the appropriation accounts, the report of the Indian Comptroller and Auditor-General, and the despatch of the Indian Government which covers them, should be laid before Parliament, and should be accompanied by a minute of the Secretary of State in Council, dealing with questions which may be raised in the report of the Home Committee.

Audit of Home Accounts.

92. The Auditor of the Indian Home Accounts addresses a report to the Secretary of State, modelled on the lines of the appropriation reports which the Comptroller and Auditor-General in England addresses to the House of Commons. His report is laid before Parliament, but the House of Commons does not review it as the reports of the English Comptroller and Auditor-General are reviewed, and the action of the Secretary of State in Council upon the report is not communicated to Parliament. The auditor of the Home Accounts, like the English Comptroller and Auditor-General, has no power finally to disallow expenditure, but the Government of India Act (1858), section 52, directs him to express his approval or disapproval of the accounts of the
Q. 2652. Secretary of State. He is to make such remarks and observations in relation thereto as he may think fit, specially noting any case in which it shall appear to him that Indian revenue has been appropriated to other purposes than those of the Government of India. He is also to specify any defects or irregularities in the authorities having relation to the Secretary of State's expenditure.

Q. 2750. We understand the auditor to hold that it is open to him to form his own judgment as to whether a service is properly chargeable to the Government of India, and whether, therefore, the payments on account of it should be the subject of comment. He may, for instance, consider in the case of a payment to the Admiralty for the services of ships in Indian waters, whether the services of those ships are properly Indian services, and further, whether the payment attached to those services is at an unreasonable rate, and it is in his own discretion whether he should make a
Q. 2360. comment upon it. The auditor informs us that the authority of the Secretary of State in Council is usually accepted, but occasionally items have been reported when the provisions of the Act did not appear to have been complied with. He gave us two instances of the exercise of this discretion. His predecessor, Sir Charles Jackson, who had been a judge of the High Court in India, reported that a payment of 19,655*l.* 18*s.* 11*d.* for consular establishments in China, although in accordance with
Qq. 2686-8. previous payments, did not appear to him to have been appropriated in conformity with the Government of India Act, clauses 2 and 52. The Secretary of State took the question into consideration, and the payment was subsequently reduced.

The present auditor, Mr. Godsell, has reported that he is unable to certify the correctness of a charge for manning and maintaining Indian Government vessels, because evidence of the fulfilment of the conditions upon which the subsidy is payable had not been furnished.

93. The provisions of the Act entrust a large discretion to the auditor, and we cannot doubt that Parliament intended him to exercise a discretion which they were so minute in describing. The auditor appears to us to apply his audit in accordance with the intention of the Act, and in a spirit similar to that in which the Comptroller and Auditor-General in England applies his audit to Imperial expenditure.

We are of opinion that he is only obeying the orders of Parliament when in the free exercise of his judgment he questions an item of expenditure, and when he offers such comment as he thinks fit upon the account submitted for his audit, especially if it appears to him that Indian revenues have been appropriated to other purposes than those of the Government of India, and when he specifies any defect or irregularity in the authority under which expenditure has been incurred. The Secretary of State in Council is free to accept or reject such criticisms, for his authority is ultimately supreme, and he himself allows, or disallows, objections advanced by the auditor against his financial acts.

94. If a committee of the India Office be appointed to examine and report on the accounts of the Government of India, the home accounts of the Secretary of State in Council, together with the report of the home auditor thereupon, and a minute of the Secretary of State in Council dealing with that report, should be referred to the same committee; and the report of the Committee, together with the papers referred to the Committee, should be laid before Parliament.

CHAPTER II.

PROGRESS OF EXPENDITURE.

95. Growth of expenditure should, in the first place, be measured against growth of revenue, that is to say, against the normal increase of revenue, independent of changes in taxation; it should, in the second place, be analysed in its several branches, in order to ascertain how far the increase is normal and incurred in order to meet the needs of a civilised and growing community, or how far it is abnormal and due to special causes.

In the first place, therefore, we review the progress of revenue and expenditure during the period which has elapsed since the Mutiny. In the second place, we analyse the growth of expenditure. Our review is based upon figures furnished to us by the India Office; but as far as they relate to revenue we confine ourselves to a record of the facts, as our order of reference does not extend to the subject of revenue and taxation.

We extend our general review of income and expenditure over the period from 1861–2 to 1895–6, because the *total* sums raised and expended at and between those dates admit of fair comparison. But changes which have been made in the classification of expenditure do not enable us to analyse the progress of expenditure in its details beyond the year 1875–6. Our examination of the different heads and items of expenditure must therefore commence with the year 1875–6.

I.—General Review of Income.

96. Modern Finance in India dates from the assumption of direct rule by the Crown in 1858, and the quelling of the Mutiny; and the year 1861–2 may be taken as a convenient point of departure. The Government of India, in their despatch of 19th April 1862, thus described the financial situation at that date:— Correspondence relating to India, No. 354 of 1862, p. 77.

"The total [gross] revenue of India 10 years ago, in 1853–4, was 29,210,000*l.** It is now upwards of 43,000,000*l.* The average revenue of the three years before the Mutiny, 1854–7, was 31,980,000*l.*; for the last three years it has been 43,000,000*l.* There has been an increase, therefore, of 14,000,000*l.* in 10 years, and of 11,000,000*l.* in five years. Of this 1,500,000*l.* is due to opium, and, as nearly as we can estimate, 5,000,000*l.* to new taxes, as the income tax, stamps, and increased salt duties,† and 1,000,000*l.* may be consequent on acquisition of new territory. There remains, therefore, an increase of 6,500,000*l.* in 10 years, or 4,500,000*l.* in five years, which can be attributed to no other cause than the elasticity of existing revenue."

97. The gross revenue, as given in this despatch, was calculated on a different principle from that adopted in late years. For instance, the receipts from public works were not entered on the revenue side of the account, the net deficit only appearing on the expenditure side. In later years, the true gross revenue and true gross expenditure are brought to account. We, therefore, quote this despatch, not as containing figures for comparison with later years, but as giving shortly, and in the words of the Government of India itself, their views of the financial situation at the close of the Mutiny.

98. The accounts of these years were recast subsequently in order to facilitate comparison between different periods, and from the recast accounts we find that the gross revenue of the year 1861–2 amounted to Rx. 45,389,000. That, therefore, was the gross revenue of India in the year when equilibrium between income and expenditure was practically restored. A part of this gross revenue was derived from increase of taxation. The taxes which had been imposed during the Mutiny were estimated by the Government of India, in the despatch which we have quoted, to produce Rx. 5,000,000. The actual increase was probably greater. We incline to reckon it at Rx. 5,800,000. A portion of this increase (but probably not a very large portion, in face of the increase of the duties) may have been due to increase of consumption.

Taxes had been imposed under the following heads:—

1. Customs revenue‡ in India was derived partly from import, partly from export duties. Before the Mutiny the tariff was, as a rule, 5 per cent. *ad valorem* on

* The rupee was converted into sterling at the conventional rate of 2*s.*

† The Customs had also been increased from 5 per cent. to 10 per cent. *ad val.*

‡ Wilson's Financial Statement, 18th February 1860, H. of L., 296 of 1860, p. 88.

goods imported. In 1859 it was, with a few exceptions, raised to 10 per cent. The increase of revenue was about Rx. 1,000,000. In 1860 the duty on cotton twist and yarn was raised, and other revisions made, with an estimated gain to the revenue of Rx. 351,700.* We think that the increase of revenue from increase of duties may be taken at Rx. 1,500,000.

2. Stamps.† In 1860 the stamp duties (including court fee stamps) were generally raised, producing an additional revenue of Rx. 948,300. This is the actual increase of stamp revenue in 1861–2 over 1858–9. It is probably a full figure at which to estimate the result of the increase of the duties.

3. Salt.‡ In 1859 and 1861 the salt duty was raised, the total increase being 30 per cent. in Bengal, 50 per cent. in the North-West Provinces, the Punjab, and Oudh, 43 per cent. in Madras, and 66 per cent. in Bombay. The increase of 1859 was expected to yield Rx. 630,000, that of 1861 Rx. 598,000, or Rx. 1,228,000. The actual increase in 1861–2 over 1858–9 was Rx. 1,955,000, but part of this was due to increase of consumption. We think that the result of increased taxation may be put at Rx. 1,600,000.

4. §The income tax was imposed in 1860. In 1861 Mr. Laing, Mr. Wilson's successor, gave the produce as Rx. 1,750,000.

5. A licence duty was imposed in 1861, estimated to produce Rx. 600,000.‖ It was unpopular and difficult to enforce, and that portion of the budget scheme of 1861 was laid aside.

These additional duties therefore produced under the head of—

	Rx.
Customs	1,500,000
Stamps (say)	950,000
Salt	1,600,000
Income tax	1,750,000
	5,800,000

99. Mr. Laing, in opening the Budget of 1862–3, said:—

"The circumstances of the last Budget were remarkable. A chronic deficit, continued with scarcely an intermission for 20 years, had added 50,000,000*l.* to the National Debt of India. That deficit had been increased by the effects of the Mutiny, until in the three years from 1857 to 1860 it reached the enormous average of 12,000,000*l.*, and all the efforts of the Government, aided by the imposition of new taxes, which convulsed Indian society, had still left us, in 1860–1, with an apparently hopeless deficit of 6,000,000*l.* . . . Under these circumstances the Government of India applied itself vigorously to the further reduction of expenditure, so vigorously

* Actual gross Customs revenue (excluding import duty on salt, which is reckoned with the salt revenue):—

	Rx.		Rx.
1857–8	2,156,000	1862–3	2,464,000
1858–9	2,873,000	1863–4	2,384,000
1859–60	3,873,000	1864–5	2,296,000
1860–1	4,232,000	1865–6	2,280,000

that out of an expenditure of 29,000,000*l.* open to revision, a saving of *5,000,000*l.* was effected in a single year. . . . The growing prosperity of the country gave buoyancy to the revenue . . . and the aspect of affairs changed so suddenly that, after finding myself, in January [1861], struggling with an apparently hopeless deficit, I was able in April, to my own great surprise, and, I believe, that of everyone else, to produce a Budget in equilibrium."

In 1860–1, therefore, Indian finance had not recovered from its depression. At the close of that year all the new taxes had been imposed, but there was, nevertheless, a heavy deficit. Parliamentary Paper of 1862, No. 354, p. 7.

100. In 1861–2 the tide had turned. Heroic efforts to reduce the expenditure were successful. Equilibrium was practically† restored, and the Government escaped the necessity of levying the unpopular licence tax.

101. Thirty-seven years have elapsed since this ebb-mark in Indian fortune, but the years 1896–7 and 1897–8 were disturbed by plague and famine; we therefore stop at 1895–6. We shall endeavour to gauge approximately the normal increase of revenue during the intervening period. That time may be divided into two parts. The first period extends from 1861–2, the basis year of comparison, to 1884–5, a space of 23 years. During it India suffered from vicissitudes of famine and war, but it was in the main a period of financial prosperity, marked by economy, a generally peaceful policy, and for the greater part of the time by a comparatively steady exchange. It was in consequence happy in reduction of taxation.

The second period extends over 11 years, 1884–5 to 1895–6. It was a period of falling exchange and increased expenditure, especially military expenditure, and it was in consequence marked by increase of taxation.

(1.) *First Period.*

102. During the period between 1861–2 and 1884–5, the taxes imposed after the Mutiny, in order to restore equilibrium, were to a great extent repealed, and the burthen of taxation, therefore, at the close of the period did not greatly differ from that which prevailed before the Crown undertook direct responsibility for the Government of the Indian Empire. An exception, however, must be made in respect of two new duties imposed, not to maintain equilibrium, but to promote the objects of a new and special policy—(1) A new imposition was laid upon land under the name of "Provincial Rates." These rates were granted to aid the development of that system of Provincial finance, which we have described in a former part of our report. (2) License duties were also imposed in pursuance of a policy of provision against famine. We give shortly the several reductions of taxation as they took place.

Customs.

103. In 1861 Mr. Laing had reduced the additional duty on cotton twist and yarn, which had been imposed in 1860. The increase had been estimated to produce Rx. 67,000, it actually produced only Rx. 40,000. It was of a protective character. In 1862 he repealed the additional duty of 5 per cent. on cotton piece goods producing at that time Rx. 450,000, and some other reductions in custom duties raised the total relief to Rx. 475,000. In 1864 the remaining enhanced duties of customs were reduced from 10 to 7½ per cent., with the result that in the following year there was an actual loss of revenue amounting to Rx. 88,000. In 1867 the customs duties were revised at a cost of Rx.140,000, but, to make good this loss, the export duty on rice was raised from 2 to 3 annas a maund, producing Rx. 160,000. In 1875 a revision of the tariff took place, and the general *ad valorem* rate was reduced from 7½ to 5 per cent., Parl. Paper No. 354, of 1862, Budget Speech of 1862.

---

* The aggregate of military, naval, and civil expenditure in India was actually—

	Rx.
	29,553,832 in 1860–1
	25,866,958 in 1861–2
Saving -	3,686,874

† The gross actual revenue of 1861–2 was - Rx. 45,389,000
The gross expenditure was - - - 45,772,000
Deficit - - - - 383,000

r 98597.

the figure at which it stood before the Mutiny, the customs revenue being thereby reduced by about Rx. 308,000. In July 1877 the House of Commons resolved that the import duties levied in India on cotton goods were protective in their nature, and should be repealed as soon as the condition of India would permit. In 1878 the cotton duties were slightly diminished, and some other reductions were made at a cost to the customs revenue of about Rx. 77,000.* In 1879, the cotton duties were further reduced at a cost of Rx. 200,000. In 1882 the remaining cotton duties were abolished, involving a loss of Rx. 655,000; Sir Evelyn Baring at the same time swept away the whole of the general tariff of 5 per cent. *ad valorem*, at a *net* loss, including the cotton duties, of Rx. 1,109,000, after allowing for reduction of establishments and saving on refunds. Thus in 22 years customs duties amounting to nearly $2\frac{1}{4}$ millions† had been repealed, as against about Rx. 1,600,000 imposed in consequence of the Mutiny, and the tariff of India became, as far as imports were concerned, more free than that of England herself. Before the Mutiny, India was taxed 5 per cent. on her imports. In 1882 she was free from taxation on her imports, strong liquors and salt‡ excepted. In fact, the customs revenue was derived entirely from the produce of an export duty on rice and from import duties on salt and alcohol, the last of which had been increased by 33 per cent. in this period, producing an increased revenue of Rx. 50,000.

Salt.

In 1882, Sir Evelyn Baring reduced the salt duties to 32 annas per maund. The tax as reduced was lower in Bengal than before the Mutiny, was the same as before the Mutiny in the North-West Provinces, in the Punjab, and in Oudh, but higher than before the Mutiny in Madras and Bombay.§ On the whole, the increase in Madras and Bombay overbalances the reduction in Bengal. The equalisation of the duty throughout India was, however, a necessary consequence of the removal of the internal customs barriers between province and province, a most desirable measure in itself, and it may therefore, not unfairly be said that in 1882 Sir E. Baring reduced the duty, as nearly as circumstances permitted, to the level of the duty before the Mutiny. He estimated the loss to the revenue at Rx. 1,400,000. Sir Evelyn Baring looked hopefully to the day when the salt duty might be repealed, but the day of remission had closed.

Stamps.

Various Acts were passed in this period, amending the Stamp Duty Act of 1860, and increasing the rates. They were estimated to increase the revenue from general stamp duties by about Rx. 590,000, and from judicial stamps by about Rx. 650,000, or Rx. 1,240,000 in all.

Excise.

The excise in India is levied almost entirely on spirits and narcotics, such as opium and hemp. We understand that, generally speaking, there are maximum rates, within which the Provincial Governments, subject to the assent of the Supreme Government, have a discretion; but we have found it difficult to ascertain the actual increase of the rates from time to time. The policy of the Indian Government, like that of the Imperial Government, has been to increase these rates to the highest extent compatible with successful levying of the tax. At the same time the administration has much improved, and illicit trade has been checked. The great increase of yield thereupon in the first period was due (1) to improvement of administration; (2) to increase of rates. In 1875 the import duty on spirits alone was increased by 33 per cent. We understand that a somewhat corresponding increase took place in inland duties between 1861 and 1884. On that basis increase of Excise taxation may have yielded about Rx. 700,000.* Bernard, Qq. 1723–9.

Income Tax.

In 1862† Mr. Laing relieved from income tax incomes under 500 rupees a year at a cost to gross revenue of Rx. 350,000, to net revenue of Rx. 250,000. In 1873 the income tax was abolished.

License Duties.

In 1877 and 1878‡ license duties were imposed which produced in 1883 and 1884 about Rx. 500,000 a year gross. This duty was required, not to maintain equilibrium in finance, but to provide a surplus for famine insurance.

Provincial Rates.

For many years prior to 1871, local funds existed in many parts of India, Bengal being an important exception. In Madras and Bombay cesses were levied after 1862 for certain purposes; but the bulk of these cesses were not imposed by law, but by agreement with the landholders. They were applied originally chiefly to the maintenance of roads and wells, and were subsequently extended to aid the grants for education and other purposes. In 1869 and 1871, Acts were passed in pursuance of the new Provincial policy imposing the "Provincial Rates." In consequence, the amount of cesses gradually increased.

In 1882, a local cess upon land in the North-West Provinces, producing Rx. 241,000 a year, was abolished, and the cost of certain services previously borne by the landlords in Oudh was transferred to the Imperial Government.§ The net increase of taxation involved in these measures was estimated in 1883 and 1884 at Rx. 2,772,000.

104. Comparing then the year 1861–2 with the years 1883–4 and 1884–5, we may say that, at the end of the period—

1. The general Customs duties on imports had been reduced to a point far below that at which they stood before the Mutiny. On the other hand, the duties on spirits had been raised from Rs. 3 to Rs. 4 per gallon.
2. The salt duties had been reduced to the rate at which they stood before the Mutiny, so far as was compatible with the policy which swept away inter-provincial barriers.
3. The stamp duties had been increased.
4. The income tax had been abolished.
5. License duties had been imposed to provide a famine insurance surplus.
6. "Provincial" rates had been imposed for provincial purposes, against which might be set, to a small extent, a relief from local burdens granted in the North-West Provinces and Oudh.
7. Excise rates had been raised.

---

* The gross excise revenue amounted in 1857–8 to Rx. 867,000, in 1861–2 to Rx. 1,628,826, and on the average of the years 1883–4 and 1884–5 to Rx. 3,924,414—an increase within our first period of Rx. 2,295,588. Perhaps it may be assumed that one-third of this increase was due to enhanced rates, say Rx. 700,000.

† Budget speech, 1862, P.P., 354 of 1862.

‡ *See* P.P., East India, Reduction of expenditure, 352 of 1885. Sir E. Baring's Minute of 11th August 1883 page 114, and Sir D. Barbour's Memorandum, page 102.

§ Sir E. Baring's Minute of 11th August 1883, p. 92 of Sir D. Barbour's Memorandum.

The remission of taxation in the first period had, therefore, been :—

	Rx.
Customs - - - - - -	2,227,000
Salt - - - - -	1,400,000
Income tax - - - - -	1,750,000
Total - - - - -	5,377,000
Deduct increase in excise and stamp duties* -	1,940,000
Net remission - - -	3,437,000

105. In 1861–2, when the Mutiny taxation had come fully into collection, the gross revenue from all sources was rather less than Rx. 45,400,000. It was derived partly from taxation, partly from the "Commercial" services and other receipts not in the nature of taxation.

The gross revenue derived from taxes, or sources akin to taxation was considerably less. It consisted of land revenue, customs, salt, opium, excise, stamps, Provincial rates, and assessed taxes. It amounted to Rx. 39,314,000, and, after deducting refunds and assignments on the revenue and cost of collection (Rx. 5,857,000), a net tax revenue remained of Rx. 33,457,000

	Rx.	Rx.
The average net tax revenue of the years 1883–4 and 1884–5, calculated on the same basis, was - -	41.373,000	
We deduct two taxes brought into account since 1861–62, viz., the provincial rates producing on the average of the two years Rx. 2,774,000, and the license duty Rx. 490,000, also increased stamp (Rx. 1,240,000), and Excise (Rx. 700,000) duties - - - -	5,204,000	
The average net tax revenue, therefore, of 1883–4 and 1884–5, comparable with that of 1861–2, amounted to -		36,169,000
The net tax revenue of 1861–2 was - - - -	33,457,000	
But in the interval between 1861–2 and 1884–5 taxation existing in 1861–2 was remitted to the extent of Rs. 5,377,000, and we deduct that sum from the revenue of 1861–2 (as we have deducted the taxation imposed since 1861–2 from the revenue existing in 1883–4 and 1884–5) - - - -	5,377,000	
The tax revenue of 1861–2, therefore, for the purposes of our comparison amounted to - - - -		28,080,000
Elasticity of the tax revenue in 23 years - - - or rather more than 28 per cent.		8,089,000

106. Reviewing the tax revenue as a whole, we think that, apart from the Provincial rates and the license duties, imposed for a special purpose, taxation had at the close of the period been reduced to a level not very far different from that which existed before the Mutiny ; for, though the stamp duties and the duties on spirits were in 1883–4 and 1884–5 much higher than they were before the Mutiny, on the other hand customs duties were considerably less than they were before the Mutiny.

But, in order to state the case completely, some comparison should be made between the growth of revenue and the growth of population. The population statistics in 1861–2 were very imperfect, but, as far as we can learn, the population under British rule in 1861–2 was probably about 179,000,000; in 1883-4 about 204,000,000. Therefore, while the population grew at a rate of 14 per cent., the normal tax revenue grew at a rate of about 28 per cent.

(2.) *Second Period.*

107. As we have said, famine disturbed the finance of 1896–7 and 1897–8, and those years are not good standards of comparison. We stop, therefore, at 1895–6, and the period extends in consequence over 11 years.

* We have not reckoned the increase of land revenue from resettlement as increase of taxation.

108. We endeavour, in the first place, to measure approximately the normal growth of the revenue derived from taxes, and sources akin to taxation, during the period. The average net tax revenue* of the two years—

	Rx.
1883–84 and 1884–85 was - - - -	41,373,000
The net tax revenue for the year 1895–96 was - -	53,994,000
Increase during the period - - - -	12,621,000

During this period the fall in exchange and military demands greatly increased the expenditure of the Empire. The additional charge was met temporarily by reducing the sum destined for famine insurance, and the assignments to Provincial Governments for provincial administration were for a time curtailed. It was necessary also largely to increase taxation, and that increase accounts, in part, for the increase of revenue. On 1st April 1886 the income tax was reimposed, the license duty being repealed at the same time. In 1888 the duties on salt were raised nearly to the amount at which they stood before Sir Evelyn Baring's reductions of 1882. An import duty was put upon petroleum, and the Patwari cess, an impost on land, in the North-West Provinces, which had been repealed in 1882 by Sir E. Baring, was restored. In 1894 the 5 per cent. *ad valorem* duties of customs, repealed in 1882, were reimposed, cotton goods being excepted, and a further import duty was placed on petroleum. In 1895 the 5 per cent. import duty was extended to cotton goods.† Lastly, the excise and customs rates on spirits were raised, and also the excise rates on narcotics.

We reckon the financial gain from these measures as follows:—

Income Tax.

The license duty repealed in 1886 was not elastic; it produced about Rx. 473,000. The new income tax, which replaced the license duty, produced, on the average of the years 1886 and 1887, Rx. 1,330,000. In 1895–96 it rose to Rx. 1,792,000. At the date of imposition, therefore, the net gain from the income tax was Rx. 857,000, rising in 1895–96 to Rx. 1,319,000.

Salt.

The loss by the reduction of the salt duty in 1882 was estimated by Sir E. Baring at Rx. 1,400,000. The consumption of salt increased somewhat in the interval, and the gain by reimposition may be placed at Rx. 1,500,000.

Customs.

The petroleum duty when imposed was calculated to produce Rx. 65,000, and within a short time it realised Rx. 100,000. The further increase was estimated at Rx. 200,000.

Sir James Westland estimated the increase of the general customs tariff in 1894 (cotton goods excepted) at Rx. 1,350,000, and the customs duty on cotton goods, imposed the year following, at Rx. 1,000,000. The spirit duties were further raised from Rs. 4 to Rs. 6 per gallon, producing an increased revenue of about Rx. 100,000. Thus the whole increase on customs, including the petroleum duties, was calculated at Rx. 2,750,000.

Excise.

It is difficult to estimate the effect of raising the excise rates on spirits and narcotics. Between 1884–5 and 1895–6 the excise revenue increased from Rx. 3,985,000 to Rx. 5,700,000, a gain of Rx. 1,715,000, or 43 per cent. Sir C. Bernard attributed a part of this increase to prosperity, but he said (speaking in 1895) that within the last 10 years the duty on imported spirits had risen from 4 to 6 rupees a gallon, an increase of 50 per cent., and that somewhat corresponding increases had taken place in the excise duties. He mentioned that in 1883–4 600,099 gallons of spirits paid excise in Bombay city, yielding a

Q. 1720 *et seq.*

* We deduct from the gross revenue, refunds and drawbacks, assignments, cost of collection, revenue from Forests and Registration, and tributes from Native States.

† This duty was reduced to 3½ per cent. in 1896–7, but the reduction does not fall within the time of our survey.

revenue of Rx. 166,000. In 1893–4 561,000 gallons paid excise, producing Rx. 229,000. In this particular case, therefore, consumption actually fell off, and the increase of revenue was entirely due to the increase of duty. The spirit duties in all forms, customs and excise, produced over Rx. 5,000,000 in 1893–4, and, allowing for enhanced excise rates on narcotics, we should keep within safe limits if we estimate an increase of Rx. 1,000,000 as due to increase of taxation.

Land.

The Patwari cess reimposed produced Rx. 242,000 in 1895–6.

The revenue derived from increased taxation* in the second period may be summarised thus:—

	Rx.
Income tax	1,319,000
Salt	1,500,000
Customs	2,750,000
Excise	1,000,000
Patwari cess	242,000
	6,811,000
Say	6,800,000

	Rx.
We have calculated the total increase of net revenue during this period at	12,621,000
Say	12,600,000
If new taxation be deducted	6,800,000
the growth of net revenue had, therefore, been	5,800,000

or about 14 per cent.

During this period the population under British rule had increased from about 204 millions to about 230 millions, or rather over 12 per cent.

We seek to compare the produce of the tax revenue at the beginning and end of the two periods, eliminating the effect of changes in taxation. For that purpose we have deducted from the revenue as it existed at the beginning of each period the produce of duties repealed or reduced during the period, which were not, therefore, in existence at the close of the period; and we have deducted from the revenue at the close of each period the produce of taxes imposed or increased during the period, which were not, therefore, in existence at the commencement of the period. The residue in each case should enable us to compare the produce of the same duties and rates of duties at the close of the period with their produce at the commencement and to find a measure at least of the normal growth of the tax revenue during the period. The effect of changes in taxation has not been officially watched and recorded with a view to such a comparison: our results, therefore, can only be approximate, but we submit them as an indication of the progress of the tax-productiveness of the country.

This tax-productiveness appears to have advanced at an annual rate of 1·22 per cent. in the first period, and of 1·27 in the second period. During the first period a large amount of taxation was remitted. During the second period, speaking broadly, the remitted taxation was reimposed and further new taxation was added.

Summary.

109. We conclude by a review of the whole period since the Mutiny, that is to say, a comparison of the tax revenue of 1861–2 with the tax revenue of 1895–6. We estimated the net tax revenue of the year 1861–2, adjusted for the purposes of our comparison, at Rx. 28,080,000. The net tax income of 1895–6 was

* No alteration of importance was made in the stamp duties during this period.

Rx. 53,994,000. But "Provincial Rates" were added to the tax revenue in the interval, producing *net* in 1895–6 a sum of *Rx. 3,271,000 more than in 1861–2. For purposes, therefore, of comparison this item must be deducted, and the net revenue of 1895–6 reduced to Rx. 50,723,000. We have shown that a large amount of the taxation imposed after the Mutiny was remitted during the first of the periods under review, and that in the second period a great addition was made to taxation. Comparing the rates of taxation prevailing in 1861–2 and 1895–6 respectively we find that if, on the one hand, the stamp duties and the rates of excise are much higher, and if the salt duty in Madras and Bombay is more onerous in 1895, than they were respectively in 1862, on the other hand, the salt duty in Bengal is lower, the income tax is not so onerous, and Customs duties on the whole are lower in 1895–6 than they were in 1861–2. Eliminating now the effect of changes in taxation during the whole period from 1861-2 to 1895–6 we calculate that the growth of tax revenue during that period amounted to Rx. 13,890,000,† equivalent to a yearly growth of rather more than Rx. 400,000. It represents an increase on the whole period of not quite 50 per cent., or rather more than 1·5 per cent. per annum.

It must be borne in mind that, comparing like with like, in order to ascertain the normal growth of *tax revenue*, we have omitted from consideration the following heads of revenue, viz.:—1. Provincial rates imposed in development of a special policy. 2. Tributes from Native States, which are not taxation of British subjects. 3. The financial result of the "commercial" services, viz., the post office, the telegraphs, and the mint, which showed a deficit in 1862, a surplus in 1895. 4. The revenue from Forests and Registration. From these sources the State enjoyed, in 1895–6, a revenue greater than in 1861–2 by Rx. 4,614,000.‡

During the whole period under review the population had increased from 179 millions to 230 millions, or 28½ per cent.

II.—General Review of Expenditure.

110. We have next to ascertain the growth of expenditure in the two periods:—

(1.) *First Period.*

The net expenditure of the Indian Empire was—

	Forests and Registration -	70,000	
		1,273,000	
	Deduct deficit on commercial services - -	270,000	
			1,003,000
			4,614,000

The expenditure on these dates was made up as follows:—

——	1861–2.	1883–4—1884–5.	Increase.	Decrease.
	Rx.	Rx.	Rx.	Rx.
*Defence and Foreign Affairs -	16,557,000	19,158,000	2,601,000	—
Civil Administration (including Works charged to Revenue).	13,088,000	18,842,000	5,754,000	—
Debt - - - -	5,096,000	3,788,000	—	1,308,000
Total - -	34,741,000	41,788,000	—	—

Net increase Rx. 7,047,000.

111. Thus, during this period, the Indian Government had, to a large extent, repealed the taxation imposed after the Mutiny, reduced the charge of the Public Debt by Rx. 1,300,000, and had increased their outlay on the internal administration of their vast Empire by more than 5¾ millions, or by 44 per cent., while the expenditure on defence and foreign affairs advanced by Rx. 2,600,000 or nearly 16 per cent.†

At the commencement of the period, exchange was so much in favour of India that no charge was incurred on remittances home. At the close of the period exchange involved a charge, according to the calculation of the Indian Government, amounting to nearly 3½ millions, included in the expenditure given in paragraph 110.

The effect of this charge is shown in the following table:—

INCREASE of NET EXPENDITURE in 1883–5 over 1861–2.

——	India.	England.	Exchange.	Total.
	Rx.	£	Rx.	Rx.
Defence and Foreign Affairs -	—1,323,000	2,593,000	1,331,000	2,601,000
Civil Charges - - -	4,564,000	1,134,000	380,000	6,078,000
Interest on Debt - - -	—2,398,000	501,000	589,000	—1,308,000
Public Works - - -	—4,502,000	3,040,000	1,138,000	—324,000
Total - - -	—3,659,000	7,268,000	3,438,000	7,047,000

This charge of Rx. 3,438,000 represents the *additional* number of rupees required to meet the home charges compared with the number that would have been required for that purpose if the exchange had bought 2*s.* for a rupee.

At the assumed ratio between gold and silver, which, in fact, so long prevailed, of 15½ to 1, the rupee is worth only 1*s.* 10⅝*d.*, not 2*s.*; but at the same time it is fair to remark that the average rate of exchange actually realised during the period between 1861–2 and 1872–3 was 1*s.* 11⅜*d.*

112. The first period was marked by two costly famines,‡ by the Afghan war, which cost Rx. 17,585,000 (net), and by the Egyptian expedition, which cost Rx. 1,360,000, making an extraordinary war expenditure of nearly Rx. 19,000,000, towards which Great Britain contributed 5,500,000*l.*, or about Rx. 6,000,000.

* This head includes Army, military works, special defences (in later years), marine, political, military railways, and pensions from military funds.

† In pursuance of two distinct lines of policy, the development of provincial finance and insurance against famine, the Indian Government had imposed two new taxes, "Provincial Rates" and the license tax, producing together about 3¼ millions.

‡ The Bengal famine in 1873–4 cost 6¾ millions of Rx.; the Madras famine in 1876–8 cost 11¼ millions (including in both cases loss of land revenue).

The period was remarkably free from little wars* and frontier expeditions.

It will be remembered that we calculated the normal growth of tax revenue during the period at rather over Rx. 8,000,000, or 28 per cent. The growth of expenditure was Rx. 7,047,000, or 20 per cent., the growth of population probably about 14 per cent.

(2.) *Second Period.*

113. The average net expenditure of the years 1883–5 was (as we have already stated) - - - - - - - - - Rx. 41,788,000

The net expenditure of the year 1895–6 was - - - - - 54,188,000

Expenditure increased largely during this period. The distribution of the increase is shown in the following table:—

——	1883–4 and 1884–5.	1895–6.	Increase.	Decrease.
	Rx.	Rx.	Rx.	Rx.
Defence and Foreign Affairs -	19,158,000	28,944,000	9,786,000	—
Civil Administration (including Public Works).	18,842,000	22,024,000	3,182,000	—
Debt - - -	3,788,000	3,220,000	—	568,000
	41,788,000	54,188,000	—	—

The whole amount shows an increase of Rx. 12,400,000 to be set against an increase from tax revenue of Rx. 12,621,000, more than half that increase being due to increased taxation.

114. The expenditure under these different heads includes not only the charge for exchange on the sterling payments, but also the additional pay given to the European soldiers, and the compensation to officers, necessitated by the fall in the sterling value of the rupee. If allowance be made for these, as well as for the exchange on remittance transactions, the following table gives a summary of the increase in the net expenditure during the second period.

INCREASE of Net Expenditure in 1895–6 over 1883–5.

——	India.	England.	Exchange.	Total.
	Rx.	£	Rx.	Rx.
Defence and Foreign Affairs -	5,747,000	—201,000	4,240,000	9,786,000
Civil charges - - -	1,637,000	238,000	1,415,000	3,290,000
Interest on debt - - -	—2,073,000	112,000	1,393,000	—568,000
Railways and irrigation -	—4,371,000	922,000	3,341,000	—108,000
Total -	940,000	1,071,000	10,389,000	12,400,000

The average rate of exchange on bills drawn by the Secretary of State in 1883–5 was 1*s.* 7·422*d.*; in 1895–6, 1*s.* 1·638*d.*

Thus, while the charges in India have increased by only Rx. 940,000 and those in England by 1,071,000*l.*, or about two millions in all (apart from exchange), the fall in exchange has added nearly 10½ millions to the net expenditure.

The period was marked by a fall in exchange, by the acquisition, with large outlay, of Upper Burma, by successive expeditions of more or less costly character, and by a general increase of civil and military expenditure. On the other hand, it did not suffer from famine.

* There was a military operation in 1875, costing Rx. 2,643, and there were two in the last year of the period, 1884–5.

Summary.

115. Reviewing now the whole period from 1861–2 to 1895–6, we find that the net expenditure of the Indian Empire was—

	Rx.
In 1861–2 - - - - -	34,741,000
In 1895–6 - - - - -	54,188,000
Total net increase -	19,447,000

The distribution of this increase between India and England, and the amount due to the charge for exchange, is shown in the following table:—

INCREASE of NET EXPENDITURE in 1895–6 over 1861–2.

—	India.	England.	Exchange.	Total.
	Rx.	£	Rx.	Rx.
Defence and Foreign Affairs -	4,424,000	2,392,000	5,571,000	12,387,000
Civil Charges - - -	6,201,000	1,372,000	1,795,000	9,368,000
Interest on Debt - -	—4,471,000	613,000	1,982,000	—1,876,000
Public Works - - -	—8,873,000	3,962,000	4,479,000	—432,000
Total - - -	—2,719,000	8,339,000	13,827,000	19,447,000

Therefore the net increase in the cost of government apart from exchange was 5,620,000

III.—CIVIL EXPENDITURE.

1.—THE NATIONAL DEBT OF INDIA.

(*a.*) *General.*

116. Financial authorities have for a long time discussed the question whether it be preferable to borrow in England or in India. A Parliamentary Committee in 1889 recognised the political and financial reasons for borrowing in India, if the money could be really obtained from Indian sources, but it recommended that, if the difference between the rates of interest in India and England were so considerable as to afford compensation for the disadvantages which attend borrowing in England, loans should be raised in England to enable the Government of India to carry out their general scheme for public works. Acting on this recommendation, and experimentally, the Secretary of State in 1885 and 1886 raised two loans (7,700,000*l.*) here for works in India. This is the only money borrowed in England for works constructed by the State in India since 1875. The other loans raised in England, one only excepted, were required in order to redeem railway liabilities payable in sterling.* The excepted loan (6,000,000*l.*) was raised in 1893–4 at home, because the Secretary of State could not at the time obtain the money needed to meet the charge of Indian services at home in the ordinary manner by the sale of bills in London. It may therefore be taken as accepted policy that the Indian Government does not borrow in England for works or current expenditure in India except under abnormal circumstances. It is, however, an important question how far the money borrowed in India is derived from Indian sources. Mr. Jacob informed us that out of Rx. 103,000,000 borrowed in India,

Qq. 7438–9.

* The loans raised in England were either for the purchase of specific railways, or for advances to railway companies, which otherwise would have raised money by issuing debentures, or for paying off an existing sterling loan in order to reduce the charge for interest.

Rx. 25,000,000 was actually held in England, that Rx. 48,000,000 was held by Europeans in India, and only Rx. 30,000,000 by Natives of India. India is truly said to be a poor country, but we must be careful how we press generalities of this kind. Although the mass of the population of India has no capital for investment, there is nevertheless a considerable amount of capital in the country; but the security of the Government of India is too good to induce Indian capitalists to invest in Government stocks, for the interest offered by the Government is lower than that which can be earned on good investments in the country. If money borrowed in India is to any extent found in England, the advantages of borrowing in India are proportionately neutralised, for investors here will only subscribe on terms which will, in their opinion, secure them from the fluctuations of exchange. The Government of India estimate that, when they demand more than Rx. 5,000,000 in a year, the Indian market will not meet the demand. In that case capital in excess of that sum must be, in one shape or other, supplied from home.

(b.) *Ordinary or Unproductive Debt as distinguished from Productive Debt charged against Public Works.*

117. The debt of India, for purposes of account, is divided at the present time into two heads, (1) ordinary or unproductive debt, (2) productive or public works debt. We deal first with the ordinary debt. The history of this debt during the last 60 years conveys an interesting lesson in finance. From 1838–9 to 1861–2 deficit was the rule and surplus the exception, for 19 years of the former were arrayed against five of the latter. The statistics of the Company leave much to be desired in precision, and the figures of the early years must be taken only as approximate. The India Office, however, consider that the Return of the Debt presented to Parliament in 1881, on the motion of Sir George Balfour, is trustworthy for purposes of comparison. It begins with the year 1857, and from 1857, therefore, we use that return. The permanent debt of India, whether raised here or in India, amounted on the 30th April 1842 to 33,577,414*l.* On the 30th April 1857, immediately before the Mutiny, it amounted to 51,327,958*l.*, an increase of 53 per cent. in 15 years. The 30th April 1862 marks the close of the Mutiny expenditure, and the permanent debt had then risen to 97,037,062*l.*, an increase in 20 years of nearly 190 per cent. Return 237 of 1881.

The State began to assist railway enterprise in 1849 by a guarantee of interest, but it did not then itself undertake the construction of railways. It defrayed the cost of irrigation works from revenue; but there was at that time no capital account of expenditure on public works, and the National Debt of India as it stood on the 30th April 1862 was, with the exception of the sum of about Rx. 5,400,000, mentioned in the next paragraph, an unproductive debt, a legacy of expenditure incurred upon military operations, and in quelling the Mutiny. A change took place when India came under the direct rule of your Majesty. The old or unproductive debt ceased to grow from the date at which the Mutiny expenditure came to an end. During the 35 years which have elapsed between 1862 and 1897, war and famine have imposed heavy burthens on the Indian taxpayer; but, in spite of war and famine, this portion of the debt, far from increasing, has actually diminished.

118. The figures constituting the debt in 1862 need a few words of explanation. The State owed, in addition to its registered or permanent debt, a sum of 12,000,000*l.* to the stockholders of the old East India Company. A fund had been created for the eventual extinction of this debt, and it was actually paid off in 1874; but the fund in 1874 did not suffice for its object by 4,579,416*l.*, and 4,579,416*l.* was in consequence then added to the permanent debt of India. A liability in respect of this debt existed, of course, in 1842, in 1857, and in 1862, but it is omitted from the yearly amounts given in Sir George Balfour's return, until the actual addition on account of it was made to the debt in 1874. We may estimate the amount of that liability for 1862 in the following manner: A sum of 2,860,000*l.* set aside in 1862, and allowed to accumulate at 4 per cent., would have amounted in 1874 to 4,579,000*l.*, and an addition, therefore, of 2,860,000*l.* to the amount of the permanent debt, 97,037,062*l.*, as recorded in Sir G. Balfour's return, would cover the liability of which we speak. On the other hand, a sum of Rx. 5,400,334 had been expended out of revenue on productive public works before the 30th April 1867, and that amount was subsequently

Debt.

added to the public works portion of the debt, as will be hereafter described, and subtracted from the ordinary debt. We have no account before us showing the years to which the expenditure in detail of this Rx. 5,400,000 should be appropriated. We know that more than Rx. 2,000,000 was spent on the Ganges and Eastern Jumna canals and Rx. 1,400,000 on canals in the Punjab, which were in operation before 1862, while sums of Rx. 107,000 on the Calcutta and South-Eastern Railway and of Rx. 660,000 on various irrigation works appear to have been laid out after that date. These figures make up Rx. 4,167,000 out of the above-named sum of Rx. 5,400,000, and, so far as they carry us, they involve a reduction of the ordinary debt on the 30th April 1862 by Rx. 3,400,000. On the other hand, that debt must be increased by the East India Stock liability of Rx. 2,860,000. If these adjustments are made, the ordinary debt on the 30th April 1862 would stand at Rx. 96,497,000, say, Rx. 96,500,000. But it is probable that a part of the sum of Rx. 5,400,000, as yet unaccounted for, was spent before the 30th April 1862; and we should probably not be much in error if we estimated the ordinary debt on the 30th April 1862, at the starting point of our comparison, at Rx. 96,000,000.

119. In 1867–8 the State adopted a new policy. It determined from that time to charge expenditure on irrigation and on the construction of railways by the State to a capital account, and in the Accounts to divide the public debt into two categories:— (1) Public works or "productive" debt, the interest of which is charged not under the head of debt, but under the railway revenue account and irrigation; and (2) Ordinary or unproductive debt. In giving effect to this policy a somewhat peculiar arrangement is adopted. India has no sinking fund established by law (some provisions of small importance excepted), and no enactment of the Indian Government appropriates surplus revenue to the reduction of debt. The State undertakes certain great public works, and has to meet in consequence large and recurring demands for money. It, therefore, devotes all spare or surplus revenue, not to the purchase of debt for the purpose of cancellation, but to capital expenditure on works for which it would otherwise have to borrow. In order, however, to show accurately the amount of this capital expenditure, it charges the revenue so expended to the "public works" portion of the debt, and deducts a similar amount from the "ordinary" debt. If, for example, in any one year Rx. 700,000 of revenue can be spared, that sum is expended on productive public works. In the accounts Rx. 700,000 are added to the "public works debt" on the one hand, and on the other hand Rx. 700,000 are deducted from the "ordinary" debt. The result is the same as it would be if the spare revenue of Rx. 700,000 had been applied directly to the purchase of "ordinary" debt for cancellation, and a sum of Rx. 700,000 had been borrowed for productive capital expenditure. Thus spare and surplus revenue is indirectly, but effectively and economically, applied to the reduction of ordinary debt, for the charge and the possible loss accruing upon the two operations are saved.

The permanent debt on the 31st March 1867, immediately before the adoption of the arrangement described above, amounted, according to the Balfour return, to 92,538,000*l.* If adjustment be made upon the principle suggested in paragraph 118 for the contingent liability existing in respect of the East India Company's stock, and also for the debt in respect of productive expenditure incurred before the 31st March 1867, a net reduction of 1,920,000*l.** would be the result, and we think that the old debt, therefore, is more exactly stated, for the purpose of our comparison, at 90,618,000*l.*

120. Between 1867 and 1897 the East India Company's stock was paid off, and 4,579,416*l.* was added to the old or ordinary debt on that account, while Rx. 5,400,334 was deducted from that debt and added to the public works portion on account of expenditure on irrigation works and on the Calcutta and South Eastern State Railway incurred before 31st March 1867. Other additions to and reductions of the ordinary debt took place during the period. The net result, as stated in the Finance Accounts of the Government of India, represented the ordinary debt, as distinguished from the Public Works debt, on the 31st March 1897 at 63,706,639*l.* This figure needs some explanation. In the amount written off from the ordinary debt is included a sum of

* The liabilities on account of the East India Stock, as calculated in paragraph 118, would have amounted on the 31st March 1867 to £3,480,000. On the other hand, the ordinary debt was reduced by the transfer of £5,400,000 from it to the Public Works Debt. The difference is £1,920,000.

Rx. 9,014,522,* provided out of the capital of various pension funds and other deposits. These deposits represent sums entrusted to, and repayable by, the Government of India; and, although they have enabled the Government to avoid an increase, to that extent, of the funded debt, that saving cannot be regarded as equivalent to a reduction of the ordinary debt. We are endeavouring to ascertain the true decrease of that debt during the period under review, and we think it, therefore, more correct for the purposes of our comparison to exclude the reduction of the ordinary debt resulting from the advances of these deposits for public works expenditure. In that case the old or ordinary debt would have stood on the 31st March 1897 at 72,721,161*l.* Debt.

121. We can now compare the figures of the ordinary debt as they stood at the three dates:

According to the Balfour Return, the ordinary permanent debt amounted on the—

	£
30th April 1862 to	97,037,062
31st March 1867 „	92,538,340
31st March 1897 „	63,706,639†

But, if allowance be made for the fact that in the last-named year Rx. 9,014,522 represented only a nominal write-off, the figure for comparison in 1897 is 72,721,161*l.*; and the true reduction of the ordinary debt is 24,315,901*l.* since 1862, and 19,817,179*l.* since 1867, being 25 and 21½ per cent. respectively.

According to the calculation which we prefer for the purposes of our comparison, the ordinary permanent debt would be taken on the—

	£
30th April 1862	at 96,000,000
31st March 1867	„ 90,617,985
31st March 1897	„ 72,721,161

The decrease since 1862, therefore, amounted to 23,279,000*l.*, say 23,000,000*l.*, a reduction of rather more than 24 per cent. The decrease since 1867 amounted to 17,896,824, a reduction of not quite 20 per cent.

The reduction might have been very much greater if famine had not intervened, and if the Government could have avoided military operations. Since March 1867 the payments for famine relief have amounted to Rx. 17,292,217, in addition to Rx. 17,809,207 devoted to famine insurance; and war has since 1877–78 cost a net sum of Rx. 22,865,965.‡

---

* Money has been found in the following manner—

		Rx.
By raising unfunded and temporary debt including savings		3,735,205
Extraordinary assets, capital of various funds		8,127,352
Departmental deposits		11,305,812
Total of various liabilities		23,168,369
Less—		
Increase of cash balance	1,550,273	
Loans to public bodies	11,470,212	
Bombay Special Fund	1,333,362	
		14,153,847
Balance used on public works		Rx. 9,014,522

† The debt is stated above in sterling, but it will be remembered that a large part of it is in rupees, conventionally reckoned at 10 to the £ sterling. In 1897, however, the £ sterling approximately exchanged for 15 rupees. Therefore, the true debt in sterling would be less.

‡ The reduction of the ordinary debt was effected to a small extent by the actual discharge of debt, but mainly by deducting from the ordinary debt the amount of revenue applied to productive capital expenditure on railways and irrigation in the manner described in paragraph 119.

Debt.

The Charge of the Debt.

122. Passing now from the capital to the annual charge, we note that the rate of interest payable upon the ordinary debt has diminished in a greater ratio than the capital:—

	£	£
(1.) The charge of the permanent debt of 97,037,062*l.* (Balfour Return) existing on 30th April 1862 amounted to	4,408,620	
On the debt of 96,000,000*l.*, as calculated by us, to		4,361,500
Equivalent to an average rate of 4·543 per cent.		
We add the interest on East India Stock, payable then as part of the ordinary expenditure of India	629,970	629,970
	5,038,590	4,991,470
(2.) The charge of the permanent debt of 92,538,340*l.* (Balfour Return) existing on 31st March 1867 amounted to	4,323,811	
On the debt of 90,617,985*l.*, as calculated by us, to		4,234,000
Equivalent to an average rate of 4·672 per cent.		
We add the East India Stock Annuity	629,970	629,970
	4,953,781	4,863,970
(3.) In 1896–7 the interest payable on the whole debt was Rx. 3,753,460 in India, and 3,812,925*l.* in England, which, on the total debt of 222,998,286, gives an average rate of 3·393 per cent. On the ordinary debt as stated by the Indian Government, 63,706,639, this rate gives the charge for interest	2,161,000	
And if, as we consider right, allowance be made at the same rate for the further liability of 9,014,522, a sum of 306,000*l.* must be added, bringing the total charge to		2,467,000

The result is summarised thus:—

	On the Basis of the Indian Finance Accounts.	As adjusted by us for Purposes of Comparison.
Interest charge, 1862–3	5,039,000	4,991,000
" " 1867–8	4,954,000	4,864,000
" " 1896–7	2,161,000	2,467,000

Equivalent to a reduction since 1862 of about 50 per cent. upon our basis of comparison.

123. These calculations, however, exclude the cost of exchange. The earlier Indian accounts were stated in pounds sterling. The later accounts are stated in tens of rupees. But in 1862 and 1867, 10 rupees and the pound sterling were nearly convertible terms. The average rate of exchange actually obtained in 1861-2* on bills drawn by the Secretary of State on India realised 1*s.* 11·867*d.* for the rupee, and in 1867 1*s.* 11·064*d.* It must be recollected, moreover, that for a long period the relative valuation of gold to silver was 1 to 15½, and on that value the 165 grains of pure silver in the rupee were worth 1*s.* 10⅝*d.* At that time there was a profit rather than a loss to India on exchange, and no addition, therefore, has to be made on account of exchange to the charge of the debt in England. It is very different in 1896–7. The bills drawn in that year by the Secretary of State on India realised only on the average 1*s.* 2·451*d.* for the rupee, and it needed nearly Rx. 5 to pay 3*l.* sterling.

* *See* paragraph 67 of Sir E. Baring's minute 11th August 1883, Parliamentary Paper 352 of 1885, East India: Reduction of Expenditure.

If, therefore, the cost of exchange be added to the annual charge, the summary then will stand thus:— Debt.

	On Basis of Financial Accounts.	As adjusted by us.
	£ or Rx.	£ or Rx.
Charge of the ordinary debt, including the East India Stock Annuity, 1862 - - - - - -	5,039,000	4,991,000
Charge of the ordinary debt, including the East India Stock Annuity, 1867 - - - - -	4,954,000	4,864,000
Charge of the ordinary debt (the East India Stock Annuity having expired), 1897 - - - -	3,898,000	4,204,000

The reduction on our method of calculation amounts to nearly 16 per cent.

If the rate of exchange should continue to realise in the future 1*s.* 4*d.* for the rupee, only Rx. 1,350,000 in round figures would be required, where nearly Rx. 1,500,000 was needed in 1896–7 (a saving of 10 per cent.).

124. The return of the net income and expenditure of India, presented annually to the House of Commons on the motion of Sir Henry Fowler, states the yearly charge of the ordinary debt in a different manner. It is the result of a minute adjustment account between the "public works" debt and the "ordinary" debt. This method of adjustment, however, is somewhat complicated, and it does not enable us to compare on even terms the debt in the earlier years with the same debt in 1896–7. We think that our figures represent fairly the reduction of interest which has taken place.

125. The figures given in the last paragraph but one show the amount of interest annually payable upon the debt, but they are in excess of the annual charge to the taxpayer. The Indian Finance Department earns interest on securities which it holds, and on its cash balances in England. The sums so received may be fairly deducted from the gross interest of the debt in order to ascertain the charge of the debt to the taxpayer. The interest earned in 1862–3 was 108,262*l.*, which would reduce the charge on the taxpayers (including the dividend on East India Stock) to 4,930,328*l.* In 1861 the Currency Department of the Government of India was created, and the Government was empowered to invest in Government securities part of the cash reserve which it holds against its paper issues. The limit was at first Rx. 4,000,000, increased in 1871 to Rx. 6,000,000, in 1890 to Rx. 8,000,000, and at the end of 1896 to Rx. 10,000,000. This investment in 1867–8 produced Rx. 134,462, which was raised by other receipts to Rx. 240,960. Of late years this and other investments have produced on an average about Rx. 894,000. In all three cases the interest thus earned would proportionately reduce the burden upon the taxpayer for the year.

(*c.*) *Productive or Public Works Debt.*

126. The "Public Works" debt and the ordinary debt of India must not be measured by the same standard, for the latter is a dead weight, the former is reproductive.

127. On the 31st March 1897 the Public Debt of India amounted to 222,998,282, viz., Rx. 109,115,053 and 113,883,233*l.* sterling. From this sum of 222,998,286 the Indian Government deduct in their accounts Rx. 63,698,179, as representing the ordinary debt, leaving Rx. 159,300,107 to represent the Public Works debt, and that sum is divided into Rx. 127,402,968* for railways and Rx. 31,897,139 for irrigation works. We have stated that in the accounts a division of the debt was made with effect from April 1867, showing the amount due to the construction of railways and irrigation works, and that in a subsequent year Rx. 5,400,334 were written off from the ordinary debt and added to the Public Works debt, in order to represent

* The India Office reduce this sum by Rx. 424,207, discount involved in raising money for the purchase of two railways. We leave the figures, however, as they stand in another return of the India Office—the Statistical Abstract, 1898—in order to avoid the confusion of varying figures.

Debt. expenditure on reproductive works (irrigation) incurred before the 31st March 1867. During the 30 years between 1867 and 1897 the Public Works debt has grown steadily from—

Rx. 5,400,000 in 1867
to Rx. 61,291,000 in 1881
to Rx. 102,900,000 in 1887
to Rx. 159,300,000 in 1897

We show in a subsequent part of our report (Commercial Services) our reasons for thinking that past expenditure on railways and irrigation do not practically impose a charge upon the taxpayer.

(*d.*) *Unfunded Debt.*

128. The Indian Government has also an unfunded debt. It owes obligations inherited from the King of Oudh. It holds large deposits on account of savings banks, and the capital of various other funds, and it is subject to other forms of temporary indebtedness. On all these moneys it pays interest. On the other hand, it lends largely to municipalities and other public bodies, to cultivators, and landowners. These local loans are rather more than equal to the savings banks deposits. The balance of the moneys thus entrusted to the Government, or for which the Government is liable, has been, so far as it was available, appropriated to expenditure on reproductive works, and is included in the public works debt. Both the advances on local loans and for public works earn interest for the Government, which is nearly equivalent to the interest which the Government pays upon its unfunded obligations.

Review.

129. A Review of the History of the Public Debt of India since 1862 is satisfactory. During the interval of 35 years, large expenditure has been incurred in consequence of famine and war, yet upon the basis of comparison which we have preferred, the capital of the ordinary or unproductive debt has during that period been reduced by rather more than 24 per cent.; the annual charge for interest has been reduced by about 50 per cent., excluding exchange, and by nearly 16 per cent., including exchange; and the annual burthen on the taxpayer by 67 per cent., excluding exchange, and by 32 per cent., including exchange*. In 1897, Rx. 159,000,000 had been expended on works of irrigation and on railways, which in the near future may be expected to pay their way with little or no charge to the taxpayer. It is a question whether the time has not come when the Indian Government might specifically devote a modest part of the annual saving which it has effected in the charge of the old ordinary, or unproductive, debt to the further reduction of that debt.

A sinking fund is, in effect, a reserve fund. It is applied to the reduction of debt in ordinary times, but it constitutes also a reserve fund available to meet great emergencies without delay, and without adding to the public burthen. In the United Kingdom the "New Sinking Fund" is a reserve of this character. It was created by Sir Stafford Northcote in 1875, and it has answered well the purpose for which it was created. A fixed sum, some millions in excess of the charge of the debt, is granted by permanent Act of Parliament for the service of the debt. The difference between the actual charge of the debt and the fixed sum constitutes the New Sinking Fund. It is applied to the reduction of debt, and, as debt is paid off and the charge of the debt for interest decreases, this difference increases, and the reserve which the "New Sinking Fund" represents becomes more effective. As long as the Act creating the fund remains in force, annual provision must be made for it by law, and thus a permanent reserve, unaffected by the fluctuation of surplus or deficit, is secured and maintained.

The Indian Budget provision for famine relief and assurance is a reserve somewhat similar in nature. It is not, however, a permanent reserve, but a reserve created simply as a preservative against famine. Our suggestion means, therefore, that this provision should be increased so far as is consistent with sound finance, and made permanent like the New Sinking Fund at home. The proceeds of the fund would be employed on famine works in the first instance, and the balance would be appropriated to public works or to the reduction of ordinary debt, as the Government of India might think best.

---

* From Rx. 5,000,000 to Rx. 2,800,000.

2.—Collection of Revenue.

130. The gross revenue of India is charged in the first instance with, (1) refunds and drawbacks, (2) assignments and compensations, and (3) the cost of collecting the revenue. These charges amounted, in the years 1875–6, 1884–5, and 1895–6, to the following sums :— Qq. 10,740, &c. *See* Statistical Abstract.

	1875–6.	1884–5.	1895–6.
	Rx.	Rx.	Rx.
Refunds and drawbacks -	303,000	201,000	300,000
Assignments and compensations -	903,000	1,275,000	1,555,000
Cost of collection - - -	6,673,000	8,083,000	8,496,000
	7,879,000	9,559,000	10,351,000

131. In speaking of the cost of collection, we may set aside the two first items. Refunds and drawbacks are either sums received but not legally due, or revenue rebated. They averaged over the whole period, from 1875 to 1895, Rx. 262,000 a year. Assignments and compensations are made up of payments (1) to the French and Portuguese Governments; (2) to Native States; (3) to landowners, in compensation for revenue surrendered. The larger part of the last-named item consists of rent-free grants of land revenue which have been made to individuals for services rendered to the State, or of compositions with landowners, whose estates have, from default, fallen into the hands of the Government. In these cases there is a set-off from revenue received, and the charge is in no way connected with the collection of revenue. We may, therefore, confine our attention to the last item in the summary, the cost of collection. It amounted, in 1875–6, to Rx. 6,673,000 (or, more correctly, Rx. 6,638,000), and, in 1895–6, to Rx. 8,496,000, an advance of 27 per cent.

132. We have to consider, first, whether this charge for collection is excessive in itself, as measured, for example, by the cost of collection in the United Kingdom; and, secondly, whether its increase within the 20 years is larger than might reasonably be expected with a growing population and in an extending empire.

I. The gross revenue* of India, in 1895–6, derived from taxation, or from sources which may be regarded as taxation, amounted to Rx. 66,073,000. The cost of collecting this revenue was Rx. 8,496,000, or 12·85 per cent. Certain branches of revenue, special in their character, are included in this gross amount. Opium,† a monopoly, costs the State large sums in cultivation and preparation. The gross receipt from the drug amounted, in 1895–6, to Rx. 7,124,000; the cost of production and sale amounted to Rx. 2,069,000, or 29 per cent. The receipts from forests amounted, in 1895–6, to Rx. 1,660,000, the costs of administration to Rx. 911,000, or nearly 54·9 per cent., for the forests are tended rather with a view to the future agricultural interest of the empire than to the earning of immediate revenue. Again, registration is not a branch of ordinary revenue. It produced, in 1895–6, Rx. 425,000, the collection of which involved a charge of Rx. 233,000, or nearly 55 per cent. On the other hand, tributes from Native States, Rx. 792,000, cost practically nothing to collect. Such exceptional items of receipt should be deducted before the cost of collection in India can be fairly compared with the cost of collection at home.‡ The gross revenue of India thus corrected amounted, in 1895–6, to Rx. 56,072,000, say Rx. 56,100,000, and the cost of collection to Rx. 5,283,000, or 9·4 per cent. But this figure does not include the furlough and the

* Excluding railways, irrigation, Post Office, telegraphs and departmental receipts, but including revenue actually received, though afterwards refunded in the form of refunds or assignments.

† The opium revenue and the cost of collecting it fluctuate greatly. The average gross receipts from this source, for 21 years, 1875–6 to 1895–6, amounted to Rx. 8,725,000, the average cost of collection to Rx. 2,205,000, or 25·3 per cent.

‡ Salt, perhaps, should be also excepted, because the cost of collection includes the cost of manufacture, but the whole charge of collection, including manufacture, but exclusive of pensions, is about 6 per cent. of the revenue, or less than the average charge of collecting the ordinary taxes. It is not, therefore, worth while to except this item.

Collection of Revenue.

non-effective charges of the Revenue service. It is very difficult to estimate these charges, because the estimates and accounts of India do not state pensions and furlough allowances under the different heads of service to which they belong. There are, moreover, services, probably not large in amount, performed for the Revenue Departments by other departments of the State. These unclassed charges must clearly make an appreciable addition to the cost of collection, and if only a moderate allowance be made for them, the total cost of collection would probably amount to 10 per cent. or more. The gross revenue collected by Imperial officers in the United Kingdom from Customs, Excise, Stamps, and Taxes amounted in 1897–98 to 100,136,000*l.* The issues from the Exchequer for the charges of the Customs and Inland Revenue Departments amounted to 2,745,000*l.* To this sum must be added expenditure by other departments of the State on Customs and Inland Revenue service, including the Coastguard, which amounted to about 900,000*l.** The total cost of collection is, therefore, about 3,650,000*l.*, or 3·65 per cent.

Finance Accounts, 1897–8.

Revenue Department Estimates, 1897–8.

Note.

133. The contrast is striking, and invites closer examination. In the first place, it must be anticipated that a revenue raised over a continent and from a numerous and not wealthy people, will be expensive in collection. In the next place, the larger part of the revenue which we have made the subject of comparison is derived from land, and we are not surprised to find that the charge of collecting small sums, due by a great number of persons, is heavy. The gross sum collected under the head of Land Revenue in 1895–96 amounted to Rx. 26,201,000, but it includes a capitation tax (or house tax in lieu thereof) levied mainly in Burma (Rx. 941,000) which should be reckoned among ordinary taxes, the land revenue would then be reduced to about Rx. 25,260,000. The "provincial rates" also derived from land should be added, amounting to Rx. 3,707,000. The total land revenue is, therefore, in round figures Rx. 29,000,000, or more than half the total revenue Rx. 56,100,000 upon which we are basing our comparison. The charge of collecting the land revenue and the provincial rates in that year is stated at Rx. 4,150,000; if Rx. 26,000, the commission on the capitation tax in Burma is deducted, the actual charge of collecting land revenue and provincial rates is about Rx. 4,124,000 or 14 per cent., and if an addition is made for non-effective service and services rendered by other departments, the charge will probably not be much less than 15 per cent. It is evident, therefore, that it is the cost of collecting the land revenue, which makes the percentage of collection to which we have called attention, so heavy. We pursue this subject somewhat further. Mr. Jacob analysed for us the charges on the land revenue in 1893–4. Apart from the provincial rates, they were classified in that year under the following heads:—

	Rx.
1. Charges of district administration - - -	1,837,000
2. Charges of survey and settlement - - - -	568,000
3. Land records and agriculture - - - -	945,000
4. Charges of collection - - - - -	672,000
	4,022,000

Mr. Jacob considered that this sum did not correctly represent the cost of collecting the land revenue. He did not think the amount now deducted from the charges of district administration for salaries under the head of Law and Justice sufficient, and he would make a further deduction on that account of Rx. 512,000 from the charges of district administration. He would deduct also Rx. 256,000, the cost of the district Treasury establishments, and Rx. 157,000 under other heads. These deductions would reduce the charge of Rx. 4,022,000, by Rx. 925,000, making the net charge of collection in 1893–4, Rx. 3,097,000.† These deductions would reduce the charge

* This sum is made up as follows:—380,000*l.* incurred by other departments, 40,000*l.* represents the service rendered to the Inland Revenue by the Irish Constabulary, *see* Report on Irish Financial Relations, and approximately 500,000*l.* spent by the Admiralty on the Coastguard. These two last services are not included in the note attached to the Revenue Department estimates.

† Mr. Jacob would also deduct Rx. 962,565 (in 1895–6 Rx.1,022,015) local charges of expenditure because special rates are collected against them, but as we are classing these provincial rates with the land revenue, we do not think that that deduction is admissible (*see* pages 13 and 19 of the Finance Accounts)

of collecting the land revenue to about 12 per cent. (*see* below).* Mr. Jacob pointed out also that the measures introduced to keep the land records up to date (item 3 of the foregoing summary) are expected to materially reduce the cost of future settlements. A part of the charge under that item, therefore, should be debited to agriculture, but with the means at his disposal here he could not estimate the sum. We have said enough to show on his high authority that the real charge of collecting the land revenue is considerably less than the charge which appears on the face of the accounts; but the fact remains that the charge must, from the nature of the revenue, always be high as compared with the charge of collecting other branches of taxation revenue. Collection of Revenue.

The tax revenue (excluding revenue from opium, forests, registration, and tributes) in 1895–6 remaining after the deduction of the land revenue and provincial rates, amounted to Rx. 26,164,000, and the cost of collection appears upon the accounts as Rx. 1,134,000, or 4·33 per cent. Additional charges which should be debited to this revenue are brought to account under the collection of land revenue, and allowance is made for these, we understand, in the deductions from the land revenue charge which Mr. Jacob suggested. These sums, which we have no means of estimating, must be added to the sum of 1,134,000 Rx., as also an allowance for non-effective service and services performed by other departments. The true charge of collecting the Customs, Excise, Stamps, Assessed Taxes, and Salt Duty may then possibly amount to 5 or 5½ per cent. upon the Revenue collected. A more accurate estimate may be made for the Customs and Salt Duty, since we learn from Mr. Jacob, no part of the cost of collecting them falls upon the land revenue. The Customs, before the recent increase of duties, produced (in 1891–2) Rx. 1,701,000, and the cost of collection was about Rx. 136,000, or 8 per cent. In 1895–6 the produce was Rx. 5,017,000, the cost of collection Rx. 203,000, or 4 per cent. In both years an addition must be made for non-effective and other services. The Salt Duty produced in 1895–6, Rx. 8,862,000, the cost of collection was Rx. 521,000, or 5·88 per cent. In this case also an addition must be made for non-effective and other services, but in neither case, probably, would that addition greatly increase the percentage.

134. We have now shown (1) that the real charge of collection tested in its relation to the revenue collected, is not so great as the figures given in the accounts would indicate; (2) that the percentage is greatest in the case of the land revenue, but that considerable deductions must be made from that charge as shown in the accounts, in order to arrive approximately at a correct computation of the charge; and (3) that the cost of collecting taxes, properly so-called, in India is not much greater than in the United Kingdom. It may not even be relatively greater, if consideration be given to the conditions in which the two countries differ.

135. We have next to consider whether the increase in the cost of collection is larger than might reasonably be expected in a growing population and in an extending empire.

136. The gross revenue from land, forests, opium, tributes and taxation amounted in 1861–2 to Rx. 40,283,000; the charges† of collection to Rx. 4,826,000 or nearly 12 per cent. In 1875–6 the revenue from the same sources amounted to Rx. 47,885,000, and the charges to Rx. 6,673,000 or nearly 14 per cent. In 1895–6, the revenue amounted to Rx. 66,073,000, and the charges to Rx. 8,496,000 or nearly 13 per cent.

So far, the comparison shows upon the gross figures an increase in the percentage of collection in the first period. We do not, however, lay much stress upon a

Collection of Revenue.

comparison of the figures of 1861–2 with the figures of the later years, since changes took place during the earlier years in the method of stating the charges, which, to a great extent, weaken the value of the comparison. We should anticipate that improved means of communication, greater experience, and greater skill, would promote economy in administration; and the figures from 1875 to 1896 tend in that direction. We shall now confine ourselves to an examination of the period between 1875–6 and 1895–6, when the figures are, we believe, fairly trustworthy for purposes of comparison. The increase of revenue under the principal heads during that period of 20 years amounted to Rx. 18,188,000 or over 38 per cent. The increase in the cost of collection amounted to Rx. 1,823,000 or about 27·3 per cent. These, however, are the gross figures, and distinction must be drawn, and deductions made, as in the first part of this section, before we can estimate justly the cost of collection at the two periods.

137. The land revenue and the provincial rates* produced in 1875–6 Rx. 23,488,000, in 1895–6 Rx. 29,908,000, showing an increase of Rx. 6,420,000. The cost of collecting them, as stated in the accounts, amounted in 1875–6 to Rx. 3,004,000, in 1895–6 to Rx. 4,150,000, showing an increase of Rx. 1,146,000, the revenue increasing by 27·3 per cent., the cost of collection by 38·1, and the increase on collection would be somewhat larger if allowance were made for non-effective and other services. The cost of collection, therefore, increased, on the face of the figures, in a much greater ratio than the revenue; but it is urged that the costs of collection charged against the land revenue include charges for services unconnected with collection, and that a considerable deduction should be made from them on that account. To that extent the ratio of increase in the cost of collection would be reduced.

138. We consider next the increase in the charges of collection of taxation, properly so called, between 1875 and 1895. We exclude now, as on the previous occasion, opium, forests, and registration. The produce of salt, excise, stamps, customs, and assessed taxes increased in the period under review by Rx. 11,850,000,† the charges of collection by Rx. 240,000‡; that is to say, the increased revenue was collected at a charge of 2·02 per cent. An addition must be made for non-effective and other services; nor must it be forgotten that some of the cost of collecting these taxes is brought to account under the charges of collecting the land revenue. The accounts do not, as we have already pointed out, enable us to estimate the amount of these additions, but a liberal allowance for them would still leave a favourable result. We come, therefore, to the conclusion on the second point that the increase in the charge of collecting taxes properly so called is not so large as might have been expected.

3.—The Cost of the Civil Administration in India.

139. Under the head of the "Civil Departments" the State provides for its expenditure in conducting the civil government of the country, in administering justice, in maintaining order, and in discharging other duties undertaken for the benefit of the people.

The cost of civil government depends to a certain extent upon the numbers to be governed, and we must expect an increase under this head of expenditure to follow the natural increase of population, or the addition of new territories to the empire. It is desirable, therefore, in the first instance, to compare the progress of civil expenditure with the progress of the population.

"The territorial extension of the empire during the last 40 years," wrote Sir John Strachey in 1881, "has been enormous. Five great provinces have been added with "an area almost equal to that of France and the German Empire, with a population "of 40 millions." Civil Departments.

140. Before the Mutiny, and indeed up to the Census of 1871–2, the data upon which statisticians could calculate the numbers of the people were imperfect, and no fair comparison can be made between the estimates then made, and the more trustworthy results of recent censuses. The Census of 1871–2, however, suffices for a starting point, because the authorities of the India Office inform us that we cannot rely, for purposes of comparison, upon the figures showing the expenditure of the various departments for years earlier than 1875–6. *See also* paragraphs 106 and 105.

The census taken in the different provinces between 1868 and 1872 states that at that time an area of 880,000 square miles and a population of 185,508,000 persons were under the direct administration of the British Government. We doubt, however, whether the figures of the first census of the Indian Empire are altogether trustworthy.

141. The Census of February 1881 calculated the area directly under the British Government at 868,314 square miles, and the population at 198,861,000. The Census of 1891 gives the area of British India at 965,000 square miles, and the population at 221,173,000. In the interval, however, between 1881 and 1891, Upper Burma had been annexed, containing an area of 83,000 square miles, and a population of 2,947,000 persons. If, in order to obtain an idea of the normal growth of the population Upper Burma be omitted, the British area in 1891 was 882,000, and the population 218,226,000, say 218,000,000. The rate of normal increase, therefore, approaches for the ten years 1 per cent. per annum. At that rate of increase the population of British India in 1895–6 rose to 231,000,000.

142. We are about to give the civil expenditure for the years 1875–6, 1883–4, 1895–6, and we estimate on the data given above the population of British India for those years as follows:—

1875–6, 190,000,000.
1883–4, 203,000,000, an increase of about 7 per cent. in eight years.
1895–6, 231,000,000, an increase of about 13 per cent. in 12 years.

The net expenditure (that is, the net expenditure after deducting departmental receipts) in Civil Departments, as classified in the budget and accounts in India, is divided into the following heads:—

Net Expenditure.	1875–6.	1883–4.	1895–6.
	Rx.	Rx.	Rx.
General administration	1,464,000	1,653,000	2,023,000
Law, Justice, and Jails	2,509,000	2,665,000	3,357,000
Police	2,239,000	2,449,000	3,623,000
Marine	366,000	442,000	574,000
Education	874,000	980,000	1,317,000
Ecclesiastical	162,000	159,000	192,000
Medical	637,000	663,000	947,000
Political	432,000	539,000	1,062,000
Scientific and minor Departments	354,000	384,000	393,000
	9,037,000	9,934,000	13,488,000

The cost of exchange included in this account was, comparatively, inconsiderable in 1875–6 (Rx. 48,000). It amounted in 1883–4 to Rx. 111,000, and (including compensation to officers) in 1895–6 to Rx. 861,000.

The rise in expenditure between 1875–6 and 1883–4 was Rx. 897,000, or 9·9 per cent., a rate somewhat, but not very greatly, in excess of that at which the population was increasing.

The rise between 1883–4 and 1895–6 was Rx. 3,554,000, an increase of nearly 36 per cent., the increase in the population being about 13 per cent.

The increase over the whole period of 20 years was Rx. 4,451,000, or nearly 50 per cent., the increase in population being 20 per cent.

143. The cost of Civil Government increased, therefore, in the first period at a rate slightly in excess of the rate at which the population increased. In the second

period it increased at a rate more than double that of the population. In the second period, 1883–4 to 1895–6, a large part of the increase is due to the charges of administration in Upper Burma, amounting in 1895–6 to Rx. 809,000.* If the charge of administration in Upper Burma, and the increased charge of exchange (Rx. 749,915) be deducted, the real increase of charge on the whole period of 20 years is Rx. 2,829,000 or 31 per cent.

The increase upon the Civil Departments of India over the whole period from 1875–6 to 1895–6 is thus distributed under the different heads:—

—	Amount.
	Rx.
General Administration	559,000
Law, Justice, and Jails	848,000
Police	1,384,000
Marine	208,000
Education	443,000
Ecclesiastical	30,000
Medical	310,000
Political	630,000
Scientific and minor Departments	39,000
	4,451,000 or nearly 50 per cent. (including Upper Burma.)

The increase is large, and deserves investigation.

(a.) *General Administration.*

Q. 9146. &c. 144. This head provides the pay of the chief officers of Government. It may be divided into the following heads:—

—	1875–6.	1895–6.
	Rx.	Rx.
1. Salaries of the Governor-General, of Governors, Lieutenant-Governors, Chief Commissioners, Staff, Household, and Durbar charges	193,000	202,000
2. Executive and Legislative Councils	93,000	92,000
3. Secretariats	392,000	517,000
4. Revenue Boards, Commissioners, and Inspectors-General	288,000	385,000
5. Account and Audit Offices	163,000	238,000
6. Paper Currency Department, and Allowances to Banks for Management of Debt	76,000	61,000
7. Local Funds Establishment	—	99,000
	1,205,000	1,594,000
8. Secretary of State's Office, &c., in England	£233,000	244,000
9. Cost of Exchange	26,000	185,000†
	1,464,000	2,023,000
Increase over 1875–6	559,000	

It will be seen that in 1895–6 the "exchange" and the establishment of local funds, a new service, account for Rx. 335,000 of the increase, to which may be added Q. 9252. Rx. 25,000 for Inspectors-General provided under other heads in 1875–6. Mr. Jacob reckoned the increase in the chapter of general administration due to the acquisition of Upper Burma at Rx. 65,000. The increase in the Civil Secretariats is very large. Q. 9168. It rose from Rx. 255,000 in 1875–6 to Rx. 386,000 in 1895–6, or by about Rx. 131,000. It is due in part (Rx. 20,000) to Burma, but in the main to increase of staff. Four deputy and assistant secretaries have been created in the Secretariats of the Govern-

* The police and the charges for law and justice account for nearly Rx. 666,000 of this amount. It may be noted that the expenditure on Upper Burma, including works for all kinds, and extra army charges in the years between 1886–7 and 1896–7 (the last year is partly estimated) exceeded the revenue by no less a sum than Rx. 14,800,000.

† Besides Rx. 77,000 for exchange compensation included above.

ment of India alone, besides additions of other officers in the provincial Secretariats. There does not appear to have been an increase in the rates of pay. But, though the rise in charge is large, it is not excessive if compared with the increase of population. If we eliminate new services and services provided under other chapters of the Budget in 1875–6, we find that the net increase is about 9 per cent., while the increase in population has been probably about 20 per cent. We offer this only as a rough criterion by which to test the growth of expenditure, for we do not allow that public offices should grow *pari passu* with population. Some increase, however, must be expected in a growing community, and we are not prepared to say that the cost of general administration in India is excessive in 1895 as compared with 1875, nor are we prepared to say that the growth is excessive as compared with other countries.*

(b.) *Law and Justice, Jails, and Police.*

145. Mr. Jacob prepared for us a statement of the cost of Law and Justice, and Police, in 1861–2 and 1875–6. He did not, however, think that reliance could be placed on the earlier year for purposes of comparison.† We compare his figures with those of 1895–6. They represent gross expenditure in India:— App. No. 14, Vol. II, p. 184. Qq. 4199, &c.

—	1861–2.	1875–6.	1895–6.
	Rx.	Rx.	Rx.
Law and Justice	1,832,000	2,275,000	3,087,000
Jails		826,000	957,000
Police	2,163,000	2,473,000	4,039,000

In 1875, a considerable amount of expenditure now properly charged to "Law and Justice," was brought to account under the head of 'Land Revenue," and the real cost of Law and Justice in that year is, therefore, understated. The increase since 1875–6 (apart from exchange compensation) is 30 per cent. It is without doubt a large amount; but we feel assured that no one will criticise reasonable expenditure in improving the administration of justice. We have at the outset to call attention to a fact which distinguishes the chapter of "Law and Justice" from other chapters of the Indian Budget. The increased grants for this service have been provided without imposing any burthen on the *general* taxpayer, for the receipts from court fees and court charges have increased faster than the increase of expenditure, and the law courts in India are practically self-supporting. The gross cost of the courts, criminal and civil, in 1875–6, apart from non-effective charges, rents, and some incidental expenditure, amounted to Rx. 2,274,000. The cash receipts in the courts were Rx. 296,000, and the court fees levied by stamps were Rx. 1,975,000, making a total sum of Rx. 2,271,000. Therefore, the receipts practically balanced the expenditure provided under the chapter of Law and Justice, so that non-effective service, rents, and other expenses,‡ not included in that chapter, constituted the sole charge on the taxes, not exceeding, probably, a sum of Rx. 500,000. In 1895–6 the gross charge of the civil and criminal courts was Rx. 3,088,000. The cash receipts were Rx. 377,000, and the fee stamps Rx. 3,224,000, making a total of Rx. 3,601,000. Thus the receipts covered the whole charge of the chapter of Law and Justice, and left a surplus of Rx. 513,000 to be set against the non-effective and other charges not included in the chapter. If a liberal allowance be made for those charges, the balance to be defrayed from taxation would not exceed Rx. 200,000 to Rx. 300,000. As the court fees have been increasing in faster ratio than the expenditure, it seems probable that at the present rates of increase the receipts will ere long balance the whole expenditure on the service. We are now reporting financial facts. There may be a difference of opinion whether the policy of making the courts self-supporting is the best for the people of India. That point is not within our order of reference, but at a time of pressure, and of Q. 4567. Q. 4621.

* The cost of currency notes and of the management of the public debt accounts, to a great extent, for the increase of charge in England.

† Some charges shown in the account for 1875–6 do not occur in that for 1861–2.

‡ Mr. Jacob informed us (Q. 4567) that there are still salaries (charged, we understand, on land revenues), which represent in part legal services. A strict apportionment, therefore, would add somewhat to the chapter of Law and Justice.

Law and Justice.

increase of taxation, the result from the point of view of the budget is satisfactory, and may be accepted as a proof of careful financial administration. The Act regulating court fees was passed in 1870, and we learned from Mr. Jacob that it has not been substantially modified in the intervening period; we can, therefore, fairly gauge the growth of revenue since 1875, and form some estimate of its progress in the future.

146. We may mention here that the Indian Government made an elaborate inquiry in 1885 into the cost of the administration of *civil* justice. They found that the cash receipts from *civil* procedure amounted to Rx. 43,100, and that the fee stamps in *civil* cases amounted to Rx. 1,974,500, making a total receipt of Rx. 2,017,600. On the other side of the account they charged the salaries of all persons employed exclusively in the administration of civil justice, and a proportion of the salaries of those only partly so employed; they calculated also the pension and leave allowances, and the charge of rent and stationery attaching to the administration of civil justice. They then arrived at a total expenditure of Rx. 2,142,700, leaving only a net charge of Rx. 125,000 in respect of civil justice.

Confining, now, our attention to the actual increase of expenditure, we find that, excluding the court fee stamps, the net charge of *Law and Justice (apart from jails) was, in 1875–6, Rx. 1,954,000; in 1895–6 (including exchange compensation), Rx. 2,709,000; increase Rx. 755,000—about 39 per cent., or, if allowance be made for charges in Upper Burma and other charges not defrayed from this head in 1875–6, somewhat in excess of 30 per cent. The cost of Law and Justice in Upper Burma and (a small sum) at Quetta was, in the later year somewhat in excess of Rx. 100,000. There does not appear to have been any increase in rates of salary since 1875–6, certainly not in the higher classes, except in so far as the compensation for exchange, granted in 1893–4, is concerned.

147. The chief causes of increase in the criminal courts are an increase of pay to the native deputy collectors; a large increase in the number of deputy collectors in the lowest class; and (in 1884–5) a general improvement of the pay and position of this class of officer. An increase has also taken place in the class of Government pleaders. The service was inefficient, and measures were adopted to make it more efficient. The total increase on the criminal side in the 20 years has been about Rx. 205,000. On the civil side the increase, about Rx. 414,000, is due in part to an increase in the number of subordinate courts presided over by native judges, but chiefly to additional expenditure consequent on the separation of judicial and executive functions in the higher classes of judicial officers. No such separation has taken place in the magisterial ranks, and Mr. Jacob informed us that he anticipated a considerable increase in expenditure if a change should be made in that direction.

App. No. 16, Vol. II., p. 185.

There are 3,969 judicial officers in India, of whom 1,021 are European, and 2,948 are natives of India, the Europeans preponderating in the higher ranks.

Jails. Qq. 4688, &c.

148. The net charge for jails, deducting receipts, was in 1875–6 Rx. 555,000; in 1895–6 (including exchange compensation) Rx. 644,000; showing an increase of Rx. 89,000, or 16 per cent.

The number of prisoners does not increase; and the increase of charge is attributed to improved administration of the central prisons and to increased cost of rations.

We must deduct the net cost of jails in Upper Burma in 1895–6, Rx. 30,000. This would reduce somewhat the percentage of increase.

---

* Expenditure in 1875–6 and 1893–4 on civil and sessions courts (excluding Upper Burma), (Q. 4252–72) :—

	1875–6.	1893–4.
Civil Courts:—		
Superior courts	253,451	326,331†
Subordinate courts	224,493	331,599†
Establishments	212,613	304,453
Contingencies	34,033	85,747
Witnesses	6,175	14,195
Process service	167,370	250,284
	898,135	1,312,609
Increase	414,474	

† Increase mainly due to separation of judicial and executive functions.

Criminal courts:—		
Superior courts	354,232	342,955
Subordinate courts	108,988	213,037‡
Small cause courts	51,602	43,205
Establishments	221,494	224,708
Allowances	35,871	48,531
Witnesses	9,234	35,018
Process servers	22,171	31,854
Other charges	70,691	65,578
	874,283	1,004,886
Upper Burma		74,308
		1,079,194

‡ Increase due to improvement in pay of lower classes of native magistrates.—(Jacob.)

149. The net cost of the police in 1875–6 was Rx. 2,239,000; and in 1895–6 Rx. 3,623,000; increase Rx. 1,384,000, or 62 per cent. The net charge for police in Upper Burma in 1895–6 was about Rx. 574,000. The net increase, therefore, for the whole of India, deducting the Upper Burma police — a charge not existing in 1875–6—was Rx. 810,000, reducing the percentage to 36. Police.

The increase is due partly to increase of pay in parts of India, it being found necessary to obtain a better stamp of officer in order to prevent abuse and extortion. A military or special police* receiving higher rates of pay has also been established in parts of India to put down dacoity. In Lower Burma, for instance, the special police costs Rx. 86,000, and in Assam Rx. 88,000.

The net charge should be less than the figure which we have given, because receipts† amounting to Rx. 70,000 or 80,000, attributable properly to the police are brought to account of revenue under the heads of "provincial rates and "land revenue." Again, some municipalities undertake by special arrangement certain Government charges, instead of making a contribution towards their municipal police. Mr. Jacob thought that about half of the increase on the service was due to increase of pay, half to increase of force. He anticipated a gradual increase in improving the character of the force, which might for a time be balanced by reductions in the military police. Qq. 7662–3.

The total number of the district police force in 1876–7 was 110,339, in 1895–6 123,628, showing an increase of 13,289, of whom 6,542 were employed in Upper Burma, leaving 6,747 as the increase in the rest of India. There were 973 officers of the highest classes, district superintendents, assistant district superintendents, and inspectors of the first and second grades, and of these 571 were Europeans. The lower grades are filled by natives of India.

(c.) *Education.*

150. A sum of only Rx. 434,000 was appropriated in 1861–2 to Education, Science, and Art, a heading more comprehensive than the present heading of education alone, and comprising services for which provision is now made under "Scientific and Minor Departments." Qq. 9869, &c.

The net expenditure on education, after deduction of departmental fees and other receipts,‡ was, in 1875–6 Rx. 874,000, in 1895–6 Rx. 1,317,000; the increase Rx. 443,000 or 51 per cent.; about 13 per cent. of the gross expenditure is covered by fees levied in Government schools. Two-thirds of the gross Government expenditure is appropriated, (1) to the maintenance of Government schools, and (2) as grants in aid to other schools. Direction and inspection, technical and training schools, and government colleges, make up the balance. Municipal funds contribute, in addition, a certain sum to schools within the municipalities. This contribution amounted in 1893–4 to Rx. 235,000. Thus the whole expenditure on education from public funds State or Municipal, amounted to about Rx. 1,700,000, subject to a deduction of Rx. 220,000 received in respect of school fees paid and other receipts.

It cannot be said that Rx. 1,500,000 is a lavish or excessive grant from public funds for the education of 230 millions of people. It is, indeed, probable that the Government, apart from financial exigencies, would be glad to devote considerably larger sums to this important object. At all events steady growth of expenditure upon the service must be expected.

(d.) *Ecclesiastical.*

151. The charge of the Ecclesiastical Department amounted in 1875–6 to Rx. 162,000, and in 1895–6 to Rx. 192,000, showing an increase of Rx. 30,000 or about 18 per cent. About two-thirds of this increase is due to the exchange compensation allowance, which chaplains in common with other European servants of the Government receive; salaries are paid to three bishops of the Church of England, and there are other bishops paid as chaplains. About 150 chaplains receive from Rx. 600 to Rx. 900 a year each. These chaplains minister to the British forces in the districts where they are stationed. Allowances are made to certain clergy of the Roman Catholic church, and there is a grant of Rx. 10,000 for Presbyterian ministers in the chief cities. Qq. 9,997 &c.

---

* The military levies in Beluchistan are charged under the head of political services.

† North-West Provinces - - - 26,000
Bombay - - - - 50,000

‡ Receipts, 1875–6, Rx. 147,000; 1895–6. Rx. 220,000.

Allowances to Presbyterian ministers and Roman Catholic priests attached to particular regiments are provided in the Army budget. We think that all chaplains employed on military service should be paid from the Army grants.

(*e.*) *Political.*

Qq. 10,127, &c.

152. The Political Department is a service under the Foreign Department of the Government of India. It comprises the political residents and agents, with their assistants, at the Native courts. It provides for political subsidies of the Amir and other potentates, for payments to frontier tribes, and for the maintenance of order in Beluchistan, and on the North-west and Burma frontiers. It provides also for the charges of foreign missions. Payments are also made under this chapter in England for the Indian share of the Persian mission, of the China and other Consular establishments, for a subsidy to the Euphrates-Tigris Navigation Company, and for other charges. The expenditure on this service has risen from Rx. 432,000 in 1875–6 to Rx. 1,062,000 in 1895–6, an increase of Rx. 630,000, or 146 per cent. In 1875–6 exchange cost only Rx. 1679; in 1895–6, Rx. 69,178. The chief causes of increase have been the subsidy to the Amir Rx. 180,000, other subsidies Rx. 50,000. Political agents, chiefly in Beluchistan, Rx. 130,000. Frontier levies, and maintenance of communications in Beluchistan, Rx. 80,000. Payments to tribes, Rx. 40,000. Refugees and State prisoners, Rx. 70,000. It will be seen that the increase arises largely on the North-west frontier and in Afghanistan. The chapter, in fact, provides for foreign affairs, and does not form part of that expenditure which provides for the internal administration of the State. We include it hereafter under the head of "Defence and Foreign Affairs."

(*f.*) *Medical.*

Qq. 10,062, &c.

153. The net expenditure of the Medical Department in 1875–6 was Rx. 637,000, in 1895–6 Rx. 947,000, increase of Rx. 310,000.

The Government maintains medical officers to attend on its own servants. The Medical Department is largely employed on sanitary duties. The doctors have charge of hospitals and dispensaries, which are open to natives. The hospitals, including municipal establishments, treated in 1875–6 five millions of in and out patients, in 1895–6 over nineteen millions, and a large part of the increased expenditure is due to extended hospital accommodation. The increase which has taken place in the vaccination charge is for the service of natives. There are medical schools and colleges for the education of medical assistants, and the greater part of the students are natives. The medical staff costs about Rx. 300,000 a year; they receive salaries ranging from Rx. 700 to Rx. 1,600 a year. The medical men in civil employ may be called upon to resume military duty; they form, in fact, a reserve for the army. A military medical officer is occasionally placed in charge of a civil station with an additional allowance of Rx. 120 or Rx. 130 a year. The charges incurred in England are mainly for the care of lunatics.

The gross charge of the Medical chapter in 1895–6 was thus divided:—

	Rx.
Medical establishment	322,000
Vaccination and sanitary charges	192,000
Medical schools and colleges	83,000
Hospitals and dispensaries	353,000
Lunatic asylums	50,000
Grants for medical purposes	5,000
Other charges	15,000
	1,020,000
England and Exchange	11,000
	1,031,000

(*g.*) *Scientific and Minor Departments.*

Qq. 10,168, &c.

154. The net expenditure of the Scientific and Minor Departments rose from Rx. 354,000 in 1875-6 to Rx. 393,000 in 1895–6, an increase of Rx. 39,000. These Departments are numerous. They include the Survey and the Geological survey of India (both of which have, in consequence of reorganisation, been much reduced);

the Archæological department; the charge of special astronomical observations; and donations to scientific societies. The Agricultural department includes model farms, agricultural experiments, and cinchona plantations. Under "labour and emigration" are charged costs connected with emigration to British Colonies, and inland labour transport. This chapter provides also for the Statistical departments, including, periodically, the cost of the Census. The Meteorological department shows a considerable increase. The Famine Commission of 1880 bore satisfactory testimony to the value of its work.

(*h.*) *Marine.*

155. The Marine Department is included in the accounts of India under the head of Civil Departments; but this chapter of the Budget, including as it does Naval charges, although it comprises some services of a civil character under the Provincial Governments, is more properly a part of the provision for National defence, and should be considered with the Army Budget. The charges of a civil character are subsidies to lines of river communication, and lighthouse and pilotage charges, but the two latter heads of expenditure are covered by receipts. We desire in this section of our Report to show clearly the progress of the expenditure on the civil and internal administration of the country, and we, therefore, do not further consider here the charge of the Marine Department. Qq. 9804, &c.

Summary of Charge for Civil Administration.

156. We are now in a position to summarise the progress of the expenditure of India on its civil government during the period of twenty-one years ending the 31st March 1896. We have followed in our analysis of that expenditure the lines of the Indian finance accounts, and, of the Returns founded thereon, in order to facilitate a comparison of our figures with those published by the Government; but we have now several modifications to make, in order to give a true view of the progress of those services which represent the internal administration of the Indian Empire.

We have stated the net expenditure of the services classified in the Budget as Civil Departments at Rx. 9,037,000 in 1875–6, and at Rx. 13,488,000 in 1895-6. But in this classification the Marine Department and the Political Department are reckoned as Civil departments. The first is in the main a department of national defence, the second represents the cost of our relations with Native and border States, and has so far no connection with the internal administration of the country. Further, in tracing the expenditure from 1875–6 to 1895–6, we seek to compare like with like, in order to ascertain the true growth of expenditure, and with that object we omit the civil expenditure in Upper Burma, which did not form part of the Empire in 1875–6. Lastly, the chapter of Law and Justice takes credit only for cash receipts in the courts, whereas we have shown that the court fees levied by stamps should be set off in addition against the gross expenditure of the courts, in order to show truly the charge of "law and justice" to the general taxpayer. These modifications give the following results:—

		1875–6. Rx.		1895–6. Rx.
Net charge of Civil Departments as given in the accounts		9,037,000	Rx.	13,488,000
Deduct Marine	Rx. 366,000		574,000	
„ Political	432,000		1,062,000	
„ Upper Burma	—		809,000	
Deduct also Court fee stamps	1,975,000		3,224,000	
		2,773,000		5,669,000
Net expenditure on Civil Departments proper		6,264,000		7,819,000

We have thus a true increase of charge to the general taxpayer on internal administration of only Rx. 1,555,000, or a little under 25 per cent., as against an increase of population which we have estimated at 20 per cent.

157. Expert authorities, it will be remembered, consider that a part of the salaries of officers engaged in the civil administration are paid from the land revenue under

Summary. the head of charges of collection. This qualification applies, however, with greater force to the year 1875–6 than to the year 1895–6, and would not, therefore, affect materially, if at all, the comparison which we have instituted. The result of our comparison is remarkable, and, if it be just, the Indian Government can hardly be charged with extravagance in this great division of expenditure. Indeed, it suggests the question whether, under more favourable circumstances of finance, a larger sum might not with advantage be appropriated to those services which so nearly concern the welfare of the people of India.

4.—Civil Buildings and Roads under the Public Works Department.

Qq. 10,684, &c. 158. The central Government is not concerned with the details of civil buildings and roads, the administration of which is entrusted to the Public Works Departments of the Provincial Governments.

The gross expenditure in India was—

	1875–6.	1883–4.	1895–6.
	Rx.	Rx.	Rx.
On civil buildings	3,242,000	1,009,000	1,176,000
On roads and communications		1,246,000	2,025,000
On miscellaneous improvements		566,000	327,000
On establishments, &c.		1,864,000	925,000
Total	3,242,000	4,685,000	4,453,000
The receipts amounted to	488,000	488,000	621,000
Net expenditure	2,753,000	4,197,000	3,832,000
Net expenditure in England* £	77,000	70,000	62,000
Exchange on net expenditure in England	8,000	16,000	47,000
Total	2,839,000	4,283,000	3,941,000

A considerable part of the increase between 1875–6 and 1895–6 arose in Upper Burma, Rx. 229,000.

This branch of expenditure varies with the amount of funds which the provincial governments have at their disposal. If they have spare money in one year they can lay it out on buildings or roads, with a power of economising in following years if they have need for economy. The net outlay has been as low as Rx. 2,380,000 in 1877–8, and as high as Rx. 4,417,000 in 1891–2.

Mr. Jacob calculated the expenditure on roads out of this grant in 1893–4 at Rx. 2,087,000. This sum covers the whole charge of roads in India,† except municipal and village roads. The latter are mere tracks, not bridged or metalled.

5.—Miscellaneous Civil Expenditure.

(*a.*) *Political and Territorial Pensions.*

Qq. 10,191–10,213. 159. The budget of political and territorial pensions consists in the main of pensions and allowances to native princes and chiefs consequent upon obligations incurred on the taking over of their territories. It includes a few charitable allowances granted for political purposes. These pensions are for the most part personal allowances to the original grantees, but part of a pension is generally re-granted to the heir, and these re-grants form the subject of special consideration.

The charge was in 1875–6 Rx. 812,000, in 1883–4 Rx. 768,000, and in 1895–6 Rx. 454,000.

In some few cases, such as that of the Maharajah Dhuleep Singh, the allowance has been fixed in sterling, carrying with it, of course, the additional cost of exchange on remittance. These pensions are practically an expiring charge; for instance, since 1875–6 pensions of Rx. 120,000 to the Ex-King of Oudh and his family, of Rx. 98,000 to the Nizamat family of Bengal, of Rx. 11,000 to the Gond Raja in the Central Provinces, and of Rx. 23,000 in Madras, have ceased to be payable. On the death of the Maharajah Dhuleep Singh, his pension of 22,589*l.* ceased, and allowances amounting

* The English charge includes the furlough allowances of military and civil officers of the Works Department; 47,000*l.* in 1875–6, 53,000*l.* in 1883–4, and 53,000*l.* in 1895–6.

† There are in addition some military roads.

to 12,880*l.* were re-granted to his family. A distinction must be drawn between these pensions granted for political reasons, and the assignments against which revenue is received, made to Indian princes and others.

(*b.*) *Miscellaneous Charges.*

160. The chapter of small miscellaneous charges consists of a number of small items, which do not fall conveniently into other chapters. Changes in the accounts prevent fair comparison between the years 1875–6 and 1895–6, but the expenditure in India of the latter year may be set against that of 1884–5, with the following result:— Qq. 10,581, &c.

	1884–5.	1895–6.
	Rx.	Rx.
Petty provincial and local establishments	75,000	66,000
*Remittance charges on transport of treasure, &c.	26,000	22,000
Books and Periodicals	8,000	5,000
Charitable donations and relief of vagrancy	28,000	32,000
Rewards for destruction of wild animals	25,000	13,000
Special commissions of inquiry	8,000	3,000
Rent, rates, and taxes	31,000	19,000
Various items	51,000	39,000
Total	252,000	199,000

On the other side, this chapter is credited with receipts amounting in India in 1884–5 to Rx. 332,000, in 1895–6 to Rx. 450,000. It is clear, therefore, that this head of service is more than self-supporting.

(*c.*) *Printing and Stationery.*

161. There is a chief stationery office in each of the three presidencies, subject immediately to the provincial government. That of Bengal supplies the Punjab and the North-West Provinces. Bombay supplies a part of the Central Provinces. The establishment at Calcutta is the largest, costing in 1895–6 Rx. 15,300; while that at Bombay cost Rx. 2,400; that at Madras Rx. 3,000. The head of the Stationery Office is responsible for the purchase of stationery, but his powers are limited, for he must obtain the assent of his government to any outlay of large amount. Although the heads of the stationery offices are responsible to their respective provincial governments, all purchases of stationery are made on account of the centra or Imperial Government. Thus the Imperial Government is debited with all stores purchased, and credited with the issues to the different provincial governments. The cost of printing is separate from that of stationery. Most of the printing is done by government presses, but a certain amount of common printing is put out to contract. The printing establishments of the central and provincial governments cost in 1895–6 Rx. 266,000. Qq. 10,193 *et seq.*

162. The gross charge of the stationery departments, including the cost of printing and exchange, amounted in 1875–6 to Rx. 485,000; and in 1895–6 to Rx. 685,000.†

The net charge amounted in 1875–6 to Rx. 426,000; and in 1895–6 to Rx. 601,000.

It is a coincidence that the charges of printing and stationery are very similar in the Governments of England and India. The gross English charge in 1893–4 was 633,000*l.*, the net charge 528,000*l.*, as compared with the Indian charge in that year of Rx. 683,000 and Rx. 599,000 respectively. Governments and public bodies are often charged with extravagance in printing. The charge is to a large extent true, but, if the numbers governed, and the extent of territory in the United Kingdom and India, respectively, be taken into consideration, the Indian figures do not on that basis of comparison suggest a *primâ facie* case of excess. In 1875–6 the charge for purchase of stationery in India (apart from purchases in England) was Rx. 243,000, in 1895–6 Rx. 315,000; the charge for printing in the former year Rx. 174,000, in the latter Rx. 291,000. It should be noticed that since 1875–6 the amount expended on

* Premiums on bills of exchange credited under receipts on the other side amounted in 1884–5 to Rx. 22,000, in 1895–6 to Rx. 31,000, more than counterbalancing this charge. *See* paragraph 29 of this report.

† In some of the smaller offices and departments officers can incur petty charge for stationery purchased in the country, which are charged among their office contingencies.

stationery stores in England for use in India has greatly diminished. In that year the charge for stores bought here was 209,000*l.*, while in 1895–6 it was only 39,000*l.* Purchases are made in India when the price is cheaper than in England. Within the last 20 years prices of stationery and printing materials have fallen largely. The increase appears to have arisen on establishments; and it may be observed that that increase would have been larger but for the fall in materials.

163. We think it would be an advantage if a note were added to the statement of stationery and printing expenditure in the financial accounts, showing the value of stores supplied during the year to each department. A note of the amount which each department expects to demand is appended to the estimate, but it is equally, if not more, interesting to learn what each department actually took.

(*d.*) *The Mint.*

Qq. 10,599, &c.

164. The Mint usually earns sufficient receipts to make it more than self-supporting. In 1860–1 its receipts were Rx. 288,000, in 1861–2 Rx. 381,000, while the charges were in those years respectively Rx. 211,000 and Rx. 111,000. Sir Evelyn Baring calculated the net yearly surplus of the Mint in the ten years 1871–2 to 1880–1 at Rx. 64,000.

	Rx.
In 1891–2 the surplus was	113,000
„ 1892–3 „ „	198,000
„ 1893–4 „ „	136,000
„ 1894–5 the deficiency was	17,000
„ 1895–6 „ „ „	12,000
„ 1896–7 „ surplus „	95,000
„ 1897–8 „ „ „	93,000

The closing of the Mints to the free coinage of silver diminished, of course, largely the receipts of the Department.

(*e.*) *Civil Furlough Allowances.*

Qq. 10,214, &c.

165. The general rule for civil furlough is that half pay is given, subject in the covenanted Civil Service to a maximum of 1,000*l.*, and to a minimum of 500*l.* In the uncovenanted service the minimum is 200*l.*, or three-fourths of the salary. Furlough allowance, when drawn in England, was converted into sterling up to 1892–3 at the official average rate of exchange, but from 1st April 1893 a fixed rate of 1*s.* 6*d.* for the rupee has been conceded.

166. Civil furlough allowances amounted in 1875–6 to Rx. 255,000, including allowances to military officers in civil employment. The gold value of the rupee at that time was so high as to involve but little charge to the Indian taxpayer on remittance home. In 1884–5 these allowances amounted to Rx. 261,000, in 1893–4 to Rx. 327,000, in 1895–6 to Rx. 394,000, and in 1897–8 to Rx. 294,000, including exchange. The effect of the concession, which took effect on 1st April 1893, is evident. The charge, apart from exchange, was in 1884–5, 213,000; in 1895–6, 224,000; and in 1897–8, 188,000. The whole of this sum was, with an insignificant exception paid in England, the furlough charge paid in India being charged under the same head as the salaries. Furlough allowances are, in fact, a charge of active service; and, although the Indian Government is right in showing separately this somewhat exceptional head of expenditure, we think that a note should be attached to the finance accounts, showing, under the different services, the charge of furlough allowances paid in England.

167. The Indian Government consider, and we acknowledge the weight of their contention, that their officers serving in a tropical climate should be encouraged to recruit health by taking occasional leave at home. The amount of leave allowed to civil officers is, generally speaking, one-fourth of their active service up to a maximum of six years. The reduced amount of sterling which they received in the years prior to 1893 in respect of the half pay allowed to them on furlough probably discouraged men from availing themselves of their privilege; and, if the policy of the Government is correct, the measure of 1893, onerous as it is to the Indian taxpayer, presents almost a logical consequence of that policy. We have compared the rates of furlough allowance in India with leave allowances in the Imperial and Colonial services. A diplomatic officer in the Imperial service can take, without loss

of salary, 60 days yearly, together with the time taken in going home and returning to his post; a consular officer can take 30 days on the same conditions; two months' leave on the same conditions are allowed to consuls at unhealthy posts. Three months without loss of pay are given to consular officers in China and Japan. Civil servants in Ceylon are allowed one year in six on half pay, with other privileges and rates of exchange more favourable than those of India to officers appointed before 1897. The Indian scale, therefore, is not extravagant compared with the scales allowed in the other services.

(*f.*) *Pensions and Superannuations.*

168. Pensions and superannuations form a most important chapter in the budget, and we shall devote somewhat larger space to an investigation of the charges for which it provides. Qq. 10,390, &c.

Mr. Jacob compared for us the cost of non-effective service paid in India and England for the years 1875–6 and 1893–4. The following figures give the net charge* of civil pensions, *excluding the cost of exchange incurred in remitting home the pensions payable in sterling.* Receipts are deducted from gross expenditure in order to arrive at the net charge, which of course represents the burthen to the taxpayer. Appendix 34, Vol. 2, p. 230.

	1875–6.	1893–4.
Net charge of civil pensions (including medical) -	1,138,000	1,868,000

The increase in 17 years was, therefore, 730,000 or 64·1 per cent. The causes of it require examination.

The non-effective charge of the Civil Government of India may be divided into two branches.

1. Pensions, gratuities, and compassionate allowances payable to Native officers, and pensions payable to European officers *other than covenanted civil servants and medical officers.*

2. Pensions to covenanted civil servants, to their families, and to medical officers. These pensions used to be paid from funds created and maintained for the purpose.

Branch 1.

169. The first branch is again divisible into two heads, (*a*) pensions payable in India.† and (*b*) pensions payable in England.

170. (*a.*) The first head represents almost entirely pensions payable to Natives of India:—

	1875–6.	1893–4.
	Rx.	Rx.
The net charge of this head was - - -	323,000	769,000*
Increase, Rx. 446,000 or 138 per cent.		

---

* The gross charge given in the account in Appendix No. 34, Vol. II. p. 230 (*apart from exchange*) was:—

	1875–6.
Gross charge - - -	1,990,000
Deduct military and naval pensions	559,000
	1,431,000
	1893–4.
Gross charge - - -	2,695,000
Deduct military and naval pensions	625,000
	2,070,000

The net charge (*apart from exchange*) was:—

	1875–6.
Net charge - - -	1,237,000
Deduct military and naval pensions -	99,000
	1,138,000
	1893–4.
Net charge - - -	2,381,000
Deduct military and naval pensions -	513,000
	1,868,000

Increase, 639,000 = 44·6 per cent.

† Pensions payable in India:—

	Rx.
Gross charge 1893–4 - -	911,000
„ „ 1896–7 - -	1,006,000
Increase -	95,000

	Rx.
Net charge, 1893–4 - -	695,000
„ „ 1896–7 - -	804,000
Increase -	109,000

It will be noticed that Sir H. Fowler's return of net payments in 1893–4 in India (Rx. 695,000) differs from the figure given above (Rx. 769,000). Sir Henry's return deducts receipts from certain Civil Service funds which do not affect the charge of pensions to Native civil officers.

Pensions.

(*b.*) The second head represents Europeans, who are not covenanted civil servants:—

	1875–6.	1893–4.
	£	£
The net charge of this head was - - -	269,000	330,000

Increase £61,000 = 22·6 per cent.

	1875–6.	1893–4.
The total net charge of the first branch was - -	592,000	1,099,000

Increase, 507,000 = 85·6 per cent.

By far the larger part of this increase arises on pensions to Native civil officers, and Mr. Jacob found the main causes of it in the comparatively recent introduction of the pension system, the large increase in the staff of officials employed in the civil administration, and in an alteration of the pension rules (1888), which sanctioned the grant of pensions on a minimum of 10 instead of 15 years of service.

The charge appears to be an increasing one, for we notice from Sir H. Fowler's return that between 1893–4 and 1896–7 a rise took place both in the gross and net charge of the pensions payable in India. That return, however, does not enable us to analyse the charge, as Mr. Jacob has analysed the charge of 1893–4.

171. The pensions of European civil officers (other than *covenanted civil servants* and medical officers*) amounted in 1893–4 to 330,000*l.*, of which Rx. 24,000† arose in the marine service, which we class with "defence," and deduct, reducing the charge to 306,000*l.*, viz.:—

	£
Pensions for distinguished service - - -	10,000
Pensions of the office of the Secretary of State - -	40,000
Pensions of abolished Indian establishments - -	8,000
Pensions of Judges of the High Court, &c. - -	32,000
Pensions of uncovenanted officers - - - -	185,000
Other pensions (including family pensions) - -	31,000
	£306,000

172. Mr. Jacob compared the cost of this head in 1893–4 with its cost in 1881–2, because the details of 1875–6 are not available, but the total charge of 1881, he says, does not differ greatly from that of 1875. A comparison, therefore, based on the year 1881 may suffice for our purpose. It shows a decrease on the pensions of the India Office and on every other head, except that of judges (increase, 2,530*l.*), and that of the uncovenanted servants, which rose from 73,000*l.* in 1881 to 185,000*l.* in 1893–4, an increase of 112,000*l.*, equivalent to 153 per cent. As the net increase on this head since 1875 is only 60,903*l.*, it follows that the reductions on the other heads of pension must be very considerable.

Branch 2.

173. We pass on to branch 2, pensions to covenanted civil servants, to their families, and to medical officers, formerly payable from special funds.

The net charge of this head, exclusive of exchange, was in—

1875–6.	1893–4.
546,000	769,000

Increase, 223,000, or 41 per cent.

This statement is correct as far as the accounts show sums paid from the Treasury in those two years, but it does not represent a true comparison of the charge on the

* The terms of covenanted and uncovenanted servants are no longer used, but they express shortly a real distinction, and therefore we retain them in this report.

† App. No. 34, Vol. II., p. 236—

	£
Marine service - - - -	6,000
Indian navy - - - -	18,000
	£24,000

Similar figures are given, not for the year 1875, but for the year 1881, amounting to 26,000*l.* This deduction, therefore, would probably not materially affect the comparison given of the year 1875–6 with the year 1893–4

taxpayer. In 1875–6 payments in aid of pensions were made out of funds which will be described in the next paragraph, and these payments relieved the taxpayer to the extent of Rx. 176,000 in excess of like relief in 1893–4. The true charge, therefore, of 1875–6 was probably not very much less than that of 1893–4. Pensions.

174. Many years ago funds were instituted to provide pensions for the officers and persons included under this branch. The officers interested subscribed to and maintained the funds to which the Government made a contribution.

Thus considerable reserves were accumulated and invested. Between 1868 and 1885 a change of policy occurred. The Government took over the service funds and became responsible for the obligations attaching to them. The capital sums thus taken over at different dates within the period mentioned amounted to no less a sum than Rx. 9,146,000.* The Government, on undertaking these obligations, decided not to maintain the funds. They used a part of the "medical" funds in compounding the claims of the subscribers, and they from time to time paid other large sums coming into their possession from the different funds into the Treasury, and those sums formed part of the general balance of the State, available either for current or capital expenditure as the circumstances of the time permitted. The fund moneys, when paid into the Treasury, were not ear-marked to any special service, and it is impossible, therefore, to say with precision how they were actually appropriated. Large sums, however, were advanced during a series of years out of the State balances for productive works, and the India Office consider that Rx. 8,000,000,† part of the above sum of Rx. 9,146,000, were practically so employed. We cannot pretend to trace the transactions upon which this appropriation is based. It is, however, the fact that large sums out of balances were so advanced, and, that being so, we do not think the plea of the India Office unreasonable. See paragraph 120.

This sum of Rx. 8,000,000 invested, as the India Office consider, in public works, produces at 4 per cent., according to the Indian method of charge, Rx. 320,000. If the Public Works Department were charged, as we think more correctly, with interest at $3\frac{1}{2}$ per cent., the investment would produce Rx. 280,000. If the contention of the India Office, as to the use made of the monies arising from the funds, be accepted, one or other of these sums should be taken in aid of the pension charge contained in branch 2, reducing it in 1893 to a net amount of about Rx. 440,000 on the first assumption, to Rx. 480,000 in the other. A like adjustment applied to 1875–6 would leave the net charge less, but not very much less, than in 1893–4.

But that is not all. The covenanted civil servant‡ makes a contribution towards his pension. He may retire on 1,000*l.* a year paid in sterling after 25 years of service (21 years of residence), but during his service he is required to pay 4 per cent. of his salary for the time being towards his future pension. Formerly this contribution was actually paid over to the fund (the Civil Service Annuity Fund) upon which the pension would be charged; but, when the funds were taken over by the Government in 1874, a separate account of the contributions was no longer kept. The contributions themselves were not collected, but the 4 per cent. was deducted from the salary, and the balance only was paid over to the officer enjoying the salary. For instance, on a salary of 1,000 rupees, 960 only are paid, and, as far as the Treasury and the accounts are concerned, the salary is treated only as one of 960 rupees. Thus,

---

* There were three classes of funds taken over by the Government:—

1. The medical retiring funds, which were taken over between 1868 and 1870 (this charge will eventually disappear from the accounts), Rx. 1,113,000.
2. The funds out of which annuities were provided for covenanted civil servants, taken over in 1874, Rx. 3,052,000.
3. The funds by which provision was made for the families of deceased covenanted civil servants, Rx. 4,981,000, taken over between 1882 and 1885. These funds were closed to new interests in 1881, and it is therefore a dying charge. A new system was then adopted, under which the Government makes a maximum annual contribution of 35,000*l.* a year.

† The exact amount of these funds so treated is Rx. 8,032,732 viz.:—

	Rx.
Civil Service annuity funds	3,051,918
Civil funds	4,980,814

‡ "The annuity of 1,000*l.*, given to the civil servants on retirement, was originally contributed to the "extent of one-half from the fund to which all those in the service subscribed 4 per cent. on their salaries, the "Government contributing the other moiety. In 1862 the Government agreed to raise their portion to 600*l.*, "and in 1871 the Secretary of State permitted all who had rendered the requisite service and residence to "retire on a fixed pension of 1,000*l.* a year, even though their subscriptions might not have been sufficient to "purchase an annuity of 400*l.*" (10th Report of the Home Charges Committee, Parliamentary Paper 327 of 1893, page 72). Thus it appears that the pension privileges of civil servants increased after the Mutiny, and again in 1871, but that up to 1871 the pensioner found two-fifths of his pension or 400*l.* per annum.

Pensions. all touch between the pension and the contribution is lost, and it requires some research to learn that the civil servant does actually make a substantial contribution towards his pension. So much is this the case, that an authority so able and so versed in Indian accounts as Mr. Jacob could not ascertain the yearly amount of the contribution. He estimated it to amount to Rx. 64,794.* That further sum must accordingly be deducted from the pension charge under Branch 2, and the true net charge in 1893–4 would be reduced to about Rx. 380,000 or Rx. 420,000, according as 4 per cent. or 3½ per cent. is allowed upon the pension fund moneys invested. A like deduction would also apply to 1875–6.

Summary of Pension Charge.

175. We may now recapitulate our remarks on the pension budget. The accounts show an increase of Rx. 730,000 in the net charge of civil pensions between 1875 and 1893. We have shown first that Rx. 446,000, part of that sum, arose upon the pensions of civil officers, chiefly natives of India, payable in India. We added that, although we could not analyse the accounts of later years in the same detail, yet it was clear that the pensions payable in India have increased considerably in amount between 1893 and 1897. In the next place we showed that between 1875 and 1893 an increase of 61,000*l.* arose upon the pensions of European civil officers, other than *covenanted civil servants*; but we pointed out that, in this section of the pension budget, the increase under the head of one class, viz., *uncovenanted civil officers*, was very large, viz., 112,000*l.*, savings on other pension heads in the same section reducing the net increase to 61,000*l.* Thirdly, we showed that the charge on Branch 2 of the Pension budget, viz., the pensions payable to covenanted civil servants and their families, and to medical officers, amounted in 1893–4 to 768,000, an increase over 1875 of 223,000. We gave, however, reasons for thinking that this increase, though accurately recording the cash charge to the Government in the two years, did not represent the true pension charge of those years, and that there was probably little true increase of charge to the taxpayer upon this section between 1875 and 1893, for we showed also that, according to the view of the India Office, which we accept, moneys formerly belonging to special funds and amounting to more than Rx. 8,000,000 had been lent on public works; that the interest on that investment should be taken as a receipt in aid of this branch of the pension budget; and that this contribution, together with the amount of 4 per cent. deducted from the salaries of covenanted civil servants in respect of their pensions, would reduce the charge of these pensions to the taxpayer from 768,000 to 380,000, or at most 420,000.

176. We suggest that the future maximum and normal cost of the pensions granted to civil officials who are uncovenanted Europeans or natives of India, should be calculated under actuarial advice, and the normal proportion under existing regulations of non-effective to effective pay estimated, in order that the Government may satisfy themselves, in view of the great increase under these two heads, that the charge is not and will not be, apart from exchange, greater than the fair needs of the public service require. We suggest also that it should be ascertained, on actuarial advice, whether the pensions of the covenanted civil servants have attained their normal amount; also whether the pensions to their families have attained their maximum, and at what date it may be expected that the Government contribution to the family fund will be reduced to Rx. 35,000.† In this case, also, we recommend that the proportion of non-effective to effective charge should be calculated at the present time, and also at the time when, under existing regulations, a normal charge shall have been reached. Lastly, an account should be drawn up yearly, showing, on one side, the actual charge of pensions paid, and, on the other side, the income which would have been received if the capital sums taken over from the several funds had remained invested, and also the amount of the contribution which civil servants make out of their salaries towards their pensions.

177. We lay stress on the necessity of watching the proportion which the cost of non-effective service bears to that of effective service. In the English Civil Service that proportion may be said to range from 20 to 25 per cent. Probably, the existing law in normal working would not exceed 20 per cent. In India, it has been the

* Since Mr. Jacob gave his evidence, a note has been inserted in the Finance and Revenue Accounts, from which we learn that in 1897–8 a sum of Rx. 68,000 (approximately) was recovered from Indian civil servants by deduction from their salaries on account of contributions towards annuities.

† *See* first note to page 65.

practice, when officers are transferred from the Indian to other services (Imperial or Colonial), to estimate the non-effective charge latent in the conditions of their service at 25 per cent. of the effective charge, but systematic enquiry has not been instituted from time to time in order to ascertain the true proportion of the one charge to the other. Mr. Jacob, at our request, turned his attention to the point in connection with the covenanted civil service. He pointed out that it is difficult to make an accurate calculation for this purpose, because neither the amount of the 4 per cent. contribution made by the civil servant nor the effective charge of the service as a whole can be ascertained from the public accounts, since (1) the effective charges are classified by departments, and not by services, so that the salaries of covenanted civil servants are often included in the same item as those of other civil officers, and since (2) no separate accounts are kept of the 4 per cent. deduction. He stated that a calculation of the same kind as that which we desired was made for the year 1877–8 at the request of the Committee on Reduction of the Home Charges, appointed by the Secretary of State in 1879. The calculation applied to the pension list of the covenanted civil service, which amounted in that year to Rx. 408,000. It did not therefore include the pensions of the Medical Service, or those granted to families of civil servants included in our previous calculations. The Committee deducted from that sum of Rx. 408,000 (1) interest at 4 per cent. on the capital of the civil service pension fund which the Government took over, amounting to 3,052,000*l.*, that is to say, 122,000*l.*, and (2) the sum of 63,000*l.*, which, in the absence of an accurate statement, they calculated to be about the value of the 4 per cent. deduction from salaries. They thus arrived at a net pension charge to the State of 223,000*l.* On this basis, and also on the assumption that the rupee was worth in exchange 2*s.*, they estimated at 14 per cent. the proportion of the cost of non-effective to effective service (Rx. 1,585,000) upon this branch of the service. Mr. Jacob then applied, as far as the means at his disposal admitted, the same calculation to the year 1893–4. He reckoned the effective charge at Rx. 1,575,000, and the non-effective charge at Rx. 485,000, and, after deducting Rx. 122,000 interest on the capital fund, and Rx. 65,000 on account of the 4 per cent. deduction from salaries, he arrived at a net pension charge to the State of Rx. 298,000, equivalent to a proportion of about 19 per cent. This is a fair statement of the account as between the covenanted civil servant and the State, and it shows that, if the rupee were at 2*s.*, the pension charge, giving credit for the interest on the fund, would not be excessive.

Pensions.

Appendix No. 34, Vol. II., p. 230.

178. We pass, however, to the cost of exchange, and the charge then becomes more serious.

The average rate of exchange obtained for bills on India sold in London from 1850 to 1870 varied from 1*s.* 11*d.* to 2*s.* 2*d.* for the rupee. Exchange began to fall in the latter year, and during the next five years it ranged from 1*s.* 10*d.* to 1*s.* 11$\frac{1}{8}$*d.*, approximating, therefore, to the gold value of the rupee upon the basis of 15$\frac{1}{2}$ to 1. In 1875–6 the rate was 1*s.* 9·626*d.*, and, although at that rate there was some loss on remittance to England, it was not large. For instance, civil pensions of all kinds amounting to 668,000*l.* were paid at home in that year. That amount in sterling would, at the par of 1*s.* 10$\frac{1}{2}$*d.* to the rupee, have cost Rx. 712,000. Rx. 741,000 were actually required, entailing an extra charge on remittance of Rx. 29,000, or rather more than 4 per cent. From 1875 exchange fell continuously, and in 1893–4 the rupee was only worth 1*s.* 2·547*d.* in exchange (not the lowest point). In that year civil pensions amounting to 1,161,000*l.* were paid in England. That sum would, at the par of 1*s.* 10$\frac{1}{2}$*d.*, have cost Rx. 1,238,000 in India. The remittance actually required Rx. 1,915,000, entailing a charge of Rx. 678,000, or nearly 55 per cent., and, even if the exchange had been at 1*s.* 4*d.*, the extra charge would have exceeded 40 per cent. This is a grave matter to the Indian taxpayer. It can hardly be doubted that the Indian Treasury, when it decided to grant a pension of 1,000*l.* sterling to an Indian civil servant after 25 years of service, fixed that amount with some reference and in some proportion to the amount of the salary which the retiring officer would be drawing in rupees. The exchange on converting the rupee into sterling was not much below the old par, when the Indian Government undertook to pay the civil servant a pension of 1,000*l.* a year, in consideration of a yearly contribution of moderate amount, and financial authorities no doubt anticipated that Rx. 1,000 would, within a slight area of divergence, provide 1,000*l.* in sterling. That has not been so, for in 1893–4 481,000*l.*, the pensions of covenanted civil servants payable in England, cost Rx. 794,000. In other words, it took nearly Rx. 1,650 to provide 1,000*l.* sterling.

Appendix No. 40, Vol. II., p. 245.

Appendix No. 34, Vol. II., p. 230.

Pensions.

The proportion which the non-effective bears to the effective charge of this class of officer is heavy, even if exchange were at the old par of 1*s.* 10½*d.* That rate would require Rx, 513,000 to provide 481,000*l.* in sterling, and Rx. 513,000 is nearly 33 per cent. of the effective charge computed by Mr. Jacob at Rx. 1,575,000. But at the rate of exchange which prevailed in 1893–4 the non-effective is more than 50 per cent. of the effective. It is evident, therefore, that the conditions under which the State fixed the pension of the covenanted civil servant at 1,000*l.* in sterling, have been gravely modified by subsequent events. We are speaking now of the *gross relation of pension to salary*. We have already pointed out that that relation does not measure the charge to the taxpayer, who should have the benefit of the fund* accumulated in former years to meet in part the charge of pensions, and also the benefit of the contribution deducted from the salaries of the officers on active service. Mr. Jacob calculated that, after allowing for these aids, the net pension charge of the covenanted civil service to the taxpayer, including the cost of exchange, is no less than 39 per cent. of the effective charge.

Qq. 10,363–71.

179. Attention should also be given to the effect of exchange on the pension charge of the uncovenanted service. That service constitutes the larger part of the service of India. The officers belonging to it do not contribute from their salaries towards a pension fund. Their pensions are granted in rupees, and up to the year 1889–90 were, when paid in England, converted into sterling at the official rate of exchange (an average of the cost of remittances to and from India over a certain period), but from 1890 they have been converted at the fixed rate of 1*s.* 9*d.* for the rupee, in consequence of the recommendation of a Select Committee of the House of Commons. The official rate for 1893–4 was 1*s.* 2¾*d.*, and at that rate the sterling amount of the pensions would have been 126,000*l.*; at 1*s.* 9*d.* it actually was 185,000*l.* It is desirable to show what this means to the taxpayer. If the salary of the retiring uncovenanted officer were 5,000 rupees a year, he would be awarded on 30 years' service a pension of 2,500 rupees a year, and he would receive that amount while he remained as a pensioner in India, but if he came to England he would be entitled to receive it converted into sterling at the fixed rate of 1*s.* 9*d.* for the rupee, or 218*l.* 15*s.* If the exchange were at 1*s.* 4*d.*, this pension would cost the Indian taxpayer 3,281 rupees to provide that sum, or nearly two-thirds of the retiring officer's salary. The grant of the improved rate was followed by an increase in the number of pensioners. Thus the measure not only raised the amount of sterling payable in respect of each pension, but it stimulated also retirements on pension, and the transfer of pensions from India to England.

Appendix No. 34, Vol. IV., Table, p. 237.

180. Sir Henry Waterfield and Mr. Jacob appeared to think that the pension scale of the covenanted civil service is more moderate than the English graduated scale of sixtieths. On this point we are not altogether satisfied. The average salary of the covenanted civil servants when they retire is said to range from Rx. 3,600 to Rx. 4,200 a year. On retirement they receive a pension of 1,000*l.* a year, to which they have contributed 4 per cent. of their salaries during active service. The actual Government grant is thus reduced, in Sir Henry's opinion, from 1,000*l.* to 500*l.* or 600*l.* a year. It has been suggested that a pension scale such as that of the English Civil Service, rising by annual sixtieths to a maximum of two-thirds of the salary, with voluntary retirement at 60 years of age, and compulsory retirement at 65, would be relatively less expensive to the taxpayer than a fixed pension of 1,000*l.* a year granted after 25 years' service with voluntary retirement at 55, and practical retirement by 60 years of age, even when accompanied by a contribution from salary. We find from the India lists for 1894 and 1898, that there were in the first year 958, in the second year 1,021, covenanted civil servants in active employment; and that in 1894 there were 471 pensioners on the full allowance and 71 on invalid pensions, in 1898 there were 567 pensioners on full allowance and 69 on invalid pensions; so that the pensioners are about 60 per cent. of the men in active service—a very large percentage.

181. These figures emphasise our recommendation that an actuarial report should be obtained on the working of the pension regulations of the covenanted civil service. In making this recommendation, we express no opinion adverse to the grant of 1,000*l.* a year upon a given amount of service, and we fully recognise that laborious and responsible service in a tropical climate should entitle a man to a substantial pension in reasonable time.

* It must not be forgotten that that fund in part was built up by interest paid by the Government in excess of the interest which the Government could earn.

6.—Commercial Services.

182. Sir Henry Fowler in his annual return classifies as commercial services certain branches of revenue-earning business undertaken by the State. These branches are: 1, the Post Office; 2, the Telegraphs; and 3, the Public Works Department, so far as it is charged with the construction and maintenance of irrigation works and State railways. The classification is convenient, and we follow it.

(*a.*) *The Post Office.*

183. It has not been the policy of the Indian Government to cultivate the post office as a source of revenue, but to use the growing receipts in increasing the efficiency of the department. In 1861–2, according to the revised accounts the revenue of the post office was, in round numbers, Rx. 402,000, the expenditure Rx. 570,000, and the deficit or charge on the taxpayer, Rx. 168,000. In 1875–6 the revenue was Rx. 766,000, the expenditure Rx. 911,000, and the deficit Rx. 145,000. Sir Evelyn Baring, in his minute of 11 August 1883, makes the expenditure of that year Rx. 903,000 (omitting exchange), and he reckons the average deficiency of the ten years 1871–2 to 1880–1 at Rx. 123,000. The post office revenue in 1895–6 was Rx. 1,714,000, the expenditure Rx. 1,644,000—*surplus* Rx. 70,000; in 1897–8 there was a surplus of nearly Rx. 150,000. The tide turned in 1891–2, and since 1893–4 there has been an increasing surplus. The State in reckoning the post office revenue counts as a receipt the postage on letters carried for the public service,* differing so far from the practice in this country. But to make the account complete we must add some items not included in the figures which we have quoted. In the first place, the rent of post office buildings is charged to the chapter of the Public Works Department, not to that of the post office. In the next place, non-effective allowances are not included, a charge which it is difficult, as we have shown in a previous section of our report, to apportion in India among the different services.† Lastly, the post office is not credited with any receipts to set against the expenses of its savings bank business.

The pension charge, as stated in the annual Post Office Administration Reports, appears to us small.

184. In 1875–6 the post office had not undertaken savings bank business. In 1895–6 the deposits in post office savings banks amounted to Rx. 9,000,000, on which interest at the rate of $3\frac{1}{2}$ per cent. was paid. The interest earned was Rx. 267,000, but the larger part of these deposits was employed in loans to public bodies or in advances for public works, earning at least 4 per cent. If Rx. 9,000,000 were so employed, that sum would earn Rx. 360,000, and the difference may fairly be set against the expenses of managing the savings banks.

These modifications will increase the net deficit of 1861–2 and 1875–6, and the average deficit of the ten years taken by Sir E. Baring. They would probably leave the surplus of 1895–6 somewhat less than that quoted from Sir H. Fowler's return.

There has been a great increase of business since 1875–6. In the interval between that year and 1895–6, a period of 21 years, the deliveries have more than trebled. Letters, newspapers, and parcels delivered rose, according to the estimate of the post office, from 119,000,000 to 414,000,000.

In the interval also the post office has taken over the business of money orders and savings banks. Before 1879 money orders were issued by the District Treasuries. In 1878–9 245,000 orders were issued, representing a value of Rx. 892,000 and realising a commission of Rx. 10,587. In 1895–6 10,055,000 orders were issued, realising a commission of Rx. 260,000.

In 1875–6 only District and Railways savings banks existed, with 8,922 accounts with a balance of Rx. 212,000 in deposits.

* Nearly Rx. 260,000 in 1896–7.

†

—	1875–6.	1895–6.	1897–8.
	Rx.	Rx.	Rx.
Rent - - - - -	18,000	39,500	42,000
Pensions - - -	15,000	47,000	54,000

Post office.

In 1882–3, the year in which post office savings banks were established, the number of accounts opened was 39,000, and the deposits were Rx. 280,000. In 1895–6 the accounts numbered 654,000, and the balance of deposits at the end of the year amounted to Rx. 9,042,000. It is satisfactory to find that the post office is freely used by the native population. Such additions to the ordinary business of the post office necessarily increased the expenditure, and it is not matter for surprise that the charge of the chief office in Calcutta should have risen from Rx. 16,000 in 1875–6 to Rx. 66,000 in 1895–6, and the cost of the Presidency and District offices from Rx. 385,000 to Rx. 869,000. On the other hand, in spite of the great increase of business, the cost of conveyance of mails only rose from Rx. 334,000 in 1875–6 to Rx. 340,000 in 1895–6, the relatively small increase being due no doubt to the substitution over a large area of railway for more expensive modes of transport.

In 1896 the District or Presidency savings banks were transferred to the post office, and the railway banks only remained independent with 16,000 depositors and a balance of Rx. 758,000 in deposits.

Qq. 11,341, 11,342.

185. Mr. Jacob considered that the rates of pay in the postal establishments are low, that it is the lowest paid department in India with reference to the work done, adding that the Director-General has at times represented that the scales of pay of certain classes are not sufficient. Under this head, therefore, an increase of expenditure may be anticipated.

There is one branch of the Indian postal service which merits attention. A distinction is drawn between the Imperial post office and the district post offices. The district offices were originally opened to keep up communication between the heads of the districts and the police in the interior of the districts. They have been extended to keep up communication between the head offices and the different branches of administration in the district. The charge was met in some provinces by a local or provincial cess which rightly is not brought to charge as postal revenue. Advantage was taken of the official post for the distribution of private letters. Thus the district post acts as a pioneer for the Imperial post office. As the district administration develops the district post develops, and the Imperial post takes over the district post as soon as it begins to pay.

(*b.*) *Telegraphs.*

186. The telegraph revenue produced in 1861–2 Rx. 75,000, the expenditure amounted to Rx. 448,000, deficit, Rx. 373,000. In 1875–6 the revenue produced Rx. 311,000, against an expenditure of Rx. 503,000, leaving a deficit of Rx. 192,000. Sir E. Baring, in his Minute of 11th August 1883, returned the average deficit of nine years to 1880–1 at 100,000 (exclusive of exchange). In 1895–6 the revenue amounted to Rx. 1,086,000 against an expenditure of Rx. 898,000 in India and England, including exchange. Thus in this case also the tide has turned. There has been a surplus in every year since 1888–9, amounting in 1894–5 to Rx. 171,000, in 1895–6 to Rx. 188,000, in 1896–7 to Rx. 125,000, and in 1897–8 to Rx. 258,000. The railway telegraphs earn considerable sums in the dispatch of public telegrams, but these sums are carried to the credit of railway, not telegraph revenue. Building and stationery charges are included in the expenditure, and, in order to make the account complete, the charge of pensions also should be added. Mr. Jacob was unable to give us an estimate of that charge. It must, however, be considerably less than the surplus declared in recent years. On the other hand, the expenditure charged to revenue includes capital outlay for extension of the telegraph system. The capital expenditure varies much from year to year. In times of peace and prosperity it is large. Although the expenditure is charged to revenue, a capital account is kept. The capital expenditure up to the end of 1897–8 amounted to Rx. 6,299,000 on the Indian telegraphs, besides Rx. 1,153,000 on the Indo-European telegraph. The receipts from the telegraphs, therefore, enabled the State to lay out yearly a considerable sum on extensions, and to show nevertheless a good surplus of receipt over expenditure. In 1861–2 there were 11,030 miles of posts. In 1866–7, 13,784 miles of posts and 15,866 miles of wire. In 1871–2 there were 15,326 miles of posts, 28,973 miles of wire, and 245 offices. In 1896–7, 48,584 miles of posts, 148,136 miles of wire, and 1,563 offices.

Reduction of Expenditure Return, p. 130, Statistical Abstract.

(*c.*) *Irrigation.*

187. Before 1850, expenditure on public works of a productive character was very small.* The grant about that time of guarantees to railways marked a new departure.

* See Strachey's Finance and Public Works of India, chapter vii.

About the same time the Ganges Canal was begun, and irrigation works in Madras and the Punjab were undertaken. In 1854 the Public Works Department was created, but the Mutiny stopped progress. With the restoration of order an impetus was given to the works policy, but it can hardly be said that irrigation received the consideration due to it. The severe famine of 1837–8 in Northern India had indeed shown the importance of canals. A like experience was gained in Madras in 1853, and in the North-West Provinces during the drought of 1859–60. In 1864 the Secretary of State approved a proposal for undertaking irrigation works, upon the understanding that the sums which current revenue or balances could not provide should be made good by loans; but, before effect could be given to this decision, famine occurred in Orissa, and a widespread drought in Northern India during the following year emphasised the necessity for action. In 1867–8 the Government of Lord Lawrence formally adopted the policy of borrowing for extraordinary public works of productive character. No irrigation scheme, however, was to be sanctioned which did not promise to be fairly remunerative within reasonable time.* In 1878–9 a Committee of the House of Commons considered the method in which money required for public works should be borrowed, and they laid down the principle that all capital expenditure on productive works *supplied from revenue* should be treated in the accounts as if it had been borrowed, that a sum equal to that which was thus supplied should be transferred from the ordinary debt to the Productive Public Works Debt, and that interest on that sum should be charged against the works. In 1880–1 the Indian Government, giving effect to this recommendation, charged against the Public Works Debt Rx. 5,433,000, which they calculated had been expended out of revenue on productive works, chiefly of irrigation, in years before the 31st March 1867. Sir John Strachey, late Finance Minister, and General Strachey, in their work on the finances and public works of India, published in 1882, endeavoured to give a true account of productive irrigation revenue and expenditure from 1868–9 to 1879–80. Irrigation.

Statement VII., p. 444.

—	1868–9.	1879–80.
	£	£
Capital expenditure to 31st March	688,000	11,851,000
Gross direct receipts	319,000	,724,000
Share of land revenue, improved†	120,000	602,000
Total	439,000	1,326,000
Deduct working expenses	222,000	415,000
Net income	217,000	911,000
Deduct interest on capital	69,000	574,000
Net receipts	148,000	337,000

188. It must, however, be recollected that in the next year the capital account was amended by the transfer thereto of the main portion of 5,433,000*l.*, the sum spent, chiefly on irrigation, before 31st March 1867. *Ex hypothesi* that sum was duly chargeable against the capital accounts of 1868–9 and 1879–80. The amended statement will then stand thus:—

—	1868–9.	1879–80.
	Rx.	Rx.
Capital Expenditure	6,000,000	17,163,000
Surplus receipts as above	148,000	337,000
Deduct additional interest, 4 per cent., on, say, 5,000,000*l.*	200,000	200,000
Net result	Deficit - 52,000	Surplus - 137,000

* Works that might be expected to earn 4 per cent. in 10 years after completion.

† The increase of land revenue arising from irrigation is credited, not to the head of Land Revenue, but to the Irrigation Department.

Irrigation.

Sir John Strachey, speaking of the year 1881 (when the adjustment of 5,433,000*l.* had taken place), summarises progress up to that date: "On the larger irrigation "works, which are classed as productive, about 18,000,000*l.* have been spent, "12,500,000*l.* from borrowed funds, and 5,250,000*l.** from revenue. There are also "other works of the same character, not classed as productive, for which borrowed "money has not been granted, the capital outlay on which has been about 2,500,000*l.* "In all, the capital invested in irrigation works for which accounts of revenue are "prepared is something less than 20,250,000*l.* The estimated net income from them "for 1880–1 is 1,100,000*l.*, or about 5½ per cent. on the outlay, divided in the "proportions of 900,000*l.*† from the productive works class and 200,000*l.* from the "others."

Finance and Public Works of India, p. 106.

Statistical Abstract.

189. On the 31st March 1896‡ the permanent public works debt charged against irrigation was Rx. 31,101,000.

The receipts and charges of major irrigation works in 1895–6 were as follows:—

	Rx.
Direct receipts - - - - -	1,279,000
Working expenses - - - -	787,000
Net receipts - - - - -	492,000
Land revenue due to irrigation - - -	822,000
	1,314,000
Interest on debt - - - - -	1,223,000
Surplus - - - -	91,000

1895–6 was a bad year for the Irrigation budget, because the rainfall was plentiful, and there was small demand for irrigation water. The surplus in 1891–2 was Rx. 207,000, in 1892–3 Rx. 301,000, in 1893–4 Rx. 142,000, in 1894–5 Rx. 153,000, giving an average surplus of about Rx. 200,000. In the famine year of 1896–7 it was Rx. 815,000. The sum set apart for productive irrigation works is not fixed, but is usually Rx. 750,000. The actual capital expenditure on these works from 1879-80 to 1895–6 has averaged Rx. 733,000 a year, including the expenditure on protective works, which during the same period has averaged Rx. 107,000, but excluding Rx. 1,778,000 spent in the purchase of the Madras Irrigation and Canal Company's undertaking.

190. We are, however, immediately concerned in considering the burthen on the taxpayer, and the public works accounts are not drawn with that object. Irrigation undertakings are divided into two categories, (1) major, and (2) minor. The first are either productive works estimated to earn 4 per cent. in 10 years, or protective works defrayed in great part from the famine grant. The productive works *may be* the subject of loan; the protective works are canals and tanks, the cost of which is paid out of revenue. The statement of expenditure which we have just given refers to major works only, and the interest, stated at Rx. 1,223,000, represents a permanent charge of 4 per cent. (with only 2 per cent. for the outlay in the current year) upon the total capital expenditure on those works in the past (Rx. 31,101,000). That, however, is not the real charge to the taxpayer. Mr. Jacob told us that in 1894–5 only Rx. 22,000,000 out of a total capital charge of Rx. 30,000,000 had been borrowed. The remainder had been paid out of revenue or balances. The *present taxpayer* had, therefore, in 1896, only to pay in respect of these works the interest on Rx. 22,000,000, say, Rx. 700,000 to Rx. 800,000,§ not Rx. 1,200,000, and the surplus would be to that extent, or nearly that extent, improved. The result is satisfactory, especially when it is recollected that the expenditure of Rx. 30,000,000 includes works under construction, and not as yet earning revenue.

---

* On final adjustment of the account to 31st March 1867, the sum spent on irrigation was fixed at 5,293,000*l.*, not 5,250,000*l.*, as here stated.

† This net income is subject to the charge for interest on capital expenditure.

‡ We take the year 1895–6, because 1896–7 was affected by the famine, and is not a standard year.

§ In the accounts of Indian expenditure, as a whole, credit is given for capital expenditure paid out of revenue, because that amount, as we have previously explained, is deducted from ordinary debt. We are, however, considering here each section of expenditure by itself, in order to test the economy of administration in each section.

191. Nor is this all. The cost of minor works, averaging since 1879–80 Rx. 858,000 a year, is defrayed from revenue. There is, therefore, no deadweight charge on the present taxpayer in respect of past expenditure on these works. They, however, earned in 1895–6 Rx. 199,000, representing a net revenue of that amount *to the taxpayer*, and, as far as he is concerned, the result may be stated thus:— Irrigation.

	Rx.
Major works: surplus of direct receipts (after payment of working expenses) and land revenue due to irrigation -	1,314,000
Minor works: receipts - - - - -	199,000
	Rx. 1,513,000
Deduct interest on Rx. 22,000,000 to Rx. 23,000,000, money actually borrowed, say - - - - -	800,000
Surplus (round figures) - - - -	700,000

It should be added that allowance is not made upon the minor works for improved land revenue. These figures, therefore, understate the real surplus. On the other hand, the State appropriates yearly from revenue to the construction and maintenance of minor works a sum of nearly Rx. 1,000,000. This course is correct, so far as repairs and maintenance are concerned, but so far as the money is appropriated to new works it is capital expenditure, and may be regarded as a form of sinking fund.

No sinking fund, however, is in fact attached to the capital debt charged against irrigation, nor is any sum set aside to provide for deterioration. All repairs are charged against revenue, unless, indeed, such repairs should amount to a reconstruction of the works.

192. The irrigation revenue is raised either by direct sale of water, or by rate levied on the occupier for the use of water, or by rate on the owner, or by navigation receipts. In 1895–6 the rates on occupiers produced Rx. 1,120,000, that on owners Rx. 54,000; navigation receipts amounted to Rx. 155,000. The occupiers' rates are assessed by the Revenue Officers of the Provincial Governments, who have full powers for that purpose. The receipts from owners' rates are small, because, when the land is re-assessed, additions due to irrigation are brought to account, not as owners' rates, but as land revenue. There is a great difference in the results shown by the several Provinces. The larger part of the occupiers' rate is paid by the North-West Provinces (Rx. 330,000), and by the Punjab (Rx. 609,000), amounting to Rx. 939,000, out of a total occupiers' rate of Rx. 1,120,000. In Madras the irrigation receipts are, in the main, brought to account with the land revenue. In Bengal the permanent settlement has been held to prevent any addition to land revenue, and receipts are confined to direct payments for water used. In short, it may be said that irrigation works result in loss, so far as Bengal and Bombay (Deccan and Gujerat) are concerned, and that the profit arises on the works in the North-West Provinces, the Punjab, and Madras.

193. The Famine Commissioners, in their recent report, compare the total areas irrigated under the three classes of productive works, protective works, and minor works, in the three years ending 1878–9, and in the three years ending 1896–7. The first and last years of those periods give the following result:—

——	Productive Works.	Protective Works.	Minor Works.	Total.
	Acres.	Acres.	Acres.	Acres.
1876–7 - -	4,027,758	—	5,448,199	9,475,957
1896–7 - -	9,448,692	323,820	7,442,990	17,215,502

The Commissioners remark on the great extensions in State irrigation which have taken place since 1880, the date of the former Famine Commissioners' Report, and on the value which has resulted therefrom to the State. They recommend further works, entailing an outlay of Rx. 12,000,000, leading to an increase of 3,820,000 acres in the area annually irrigated from assured sources of supply. If expenditure on these works continues at the average rate of Rx. 713,000, which has prevailed since 1880, it would take 17 years to complete the programme. The Commissioners note that irrigation projects require far more time in elaboration and construction

Irrigation.

than railways, but they recommend that the proposed works should be prosecuted as energetically as may be consistent with true economy and ultimate efficiency, even though this may involve a higher annual expenditure in the future than in the past.

Such is a brief survey of irrigation administration in India, and we have shown that the results hitherto obtained, beneficial as they are, not only do not impose any burthen on the present taxpayer, but actually produce a surplus.

(*d.*) *Railways.*

Paragraph 117. Strachey's Finance and Public Works of India, p. 91.

194. We have sketched in a previous section the policy under which the Indian Government has given assistance to railways, and we have described to some extent the development of that policy since 1850. Lord Lawrence's minute of 4th January 1869 laid it down that new lines of railway should, as a rule, be undertaken by the State, and that the cost, so far as necessity required, should be defrayed by loan. This policy was substantially adopted by the Secretary of State, and by Lord Lawrence's successor, Lord Mayo. In 1870 the first steps were taken to give effect to it. The Government of India, in determining to provide such a system of railways and irrigation as the safety and progress of the country required, recognised the fact that, for a time at least, some burthen must be placed upon the taxpayer. For several years a net charge of 1,500,000*l.* to 1,750,000*l.* had been paid by the Indian Treasury to meet the interest on Guaranteed Railway Capital. That charge was diminishing with the increase of railway traffic, and the advocates of the new policy thought that the taxpayer might fairly be asked to contribute for a further period a similar amount. In 1878 and 1879 a Committee of the House of Commons considered the whole question of loans for public works in India. They did not accept the principle upon which the Government of India had founded its policy, viz., the acceptance of a certain annual charge on the taxpayer, and the limitation of loan expenditure to an amount which would not cause a notable excess over that charge. They preferred a given yearly outlay on productive public works, and a complete separation of the public works debt from the ordinary debt, treating all capital expenditure on productive works as money borrowed by the Public Works Department. The Government adopted in the main the recommendations of the Committee, and has from that time observed them as the rule of administration.

195. We will in the first place test by results the development of Indian Railway policy. In 1854 71 miles of railway were open for traffic; 273 miles were open at the breaking out of the mutiny; 1,028 miles in 1861; in 1867, 3,588 miles; in 1875, 6,523 miles; in 1881, 9,895 miles; and in 1897, 21,015 miles, including 2,017 miles belonging to Native States.

The figures which follow illustrate the growth of traffic:—

—	1866.	1880.	1897.
	Rx.	Rx.	Rx.
Tons of goods and minerals	2,833,000	10,453,000	33,531,000
Number of passengers	12,959,000	48,041,000	151,376,000
Gross earnings	4,537,000	12,470,000	25,439,000

Where railroads carried 100 tons of goods in 1866, they carried 1,183 tons in 1897.

These results were not attained without cost to the taxpayer. Mr. Jacob placed before us a return showing the net charge to the Treasury of Indian Railways from 1849–50 to 1894–5 inclusive, Rx. 51,848,000, or an average of Rx. 1,127,000 a year. If we take the average of the 20 years to 1894–5 it was Rx. 1,268,000. These sums measure the charge on the taxpayer in the past.

During this period transport by rail has replaced throughout the greater part of India transport by cart. The average cost of cartage is said to be about 4 annas (say fourpence) per ton, per mile, or 48 pies; the average cost of rail carriage on the principal lines is $7\frac{1}{4}$ pies per ton per mile (rather more than a halfpenny). Before railways were built men travelled leisurely by palanquin at the rate of 20 miles a day. In the same time they travel now 400 miles or more. The average sum received per passenger, per mile, is $2\frac{1}{2}$ pies (not quite a farthing). Sir C. Bernard, in a memorandum presented to Parliament in 1889 said: "It has been estimated that the "producers, traders, and passengers, of India benefit to an amount corresponding to "Rx. 60,000,000 a year by reason of the cheapness of railway over the old modes of "travelling."

Railways.

There is, of course, some element of conjecture in such calculations, but the figures themselves prove beyond dispute the great economy of time and money which railroads have effected, and measure to some extent the impetus given thereby to the internal as well as the external trade of India. It seems to us that these advantages have not been dearly purchased at a cost of Rx. 1,100,000 a year.

196. But railroads not only promote commerce, they are a very important factor in protecting life against famine. The Famine Commissioners of 1880 said, "Until the "whole country is more completely supplied with railways or canals by which food "can be transported cheaply and in large quantities to every part where severe want "may exist, the possibility of some unusual demand for Government interference in "particular localities, or for special classes of people, cannot be shut out, nor the "danger of the occurrence of a great calamity altogether removed. It is therefore "to the improvement of the internal communications and the removal of all obstruc-"tions to the free course of trade, accompanied by the extension of irrigation in "suitable localities, and an improved agriculture, that we look for obtaining security "against disastrous failures of the food supply in tracts visited by droughts."

Report of the Indian Famine Commission 1898, C. 9178, p. 330.

The Commissioners estimated the length of railway which might suffice to meet these requirements at 20,000 miles. It will have been seen that in 1897 21,000 miles of railway were open, and we notice that the Commissioners who have reported on the recent famine think that "most of the necessary protective railways have now "been constructed, that there is a possibility of others being constructed on their "merits as productive works, or as feeders to the trunk lines of railway, without "assistance from the famine grant, and that under existing circumstances greater "protection will be afforded by the extension of irrigation works which would not "otherwise be undertaken than by the construction of railways of that kind."

Fowler's Return 1898.

197. We, however, are dealing with the taxpayer of the present and of the future, and we have to consider the price which he pays and will pay for the benefits which railways are conferring on India. We take the year 1895–6 as a normal year, because the railway finance of subsequent years has been unfavourably affected by the famine.

1. *State Lines.*

		Rx.
In 1895–6 the gross receipts of the State lines were		18,559,000
„ „ the working expenses were		9,041,000
Surplus		9,518,000
Interest paid in India	Rx. 3,701,000	
„ „ „ England	£3,586,000	
*Cost of exchange	Rx. 2,725,000	
		10,012,000
Net deficit on State lines		494,000

2. *Guaranteed Lines.*

		Rx.
In 1895–6 the net receipts of the guaranteed lines were		3,275,000
Interest and other charges paid in India	Rx. 533,000	
„ „ „ England	£2,162,000	
*Cost of exchange	Rx. 1,642,000	
		4,337,000
Net deficit on guaranteed lines		1,062,000

* This means that it required for the State lines

	Rx.
	3,586,000 interest
	2,725,000 exchange
	Rx. 6,311,000
To pay in sterling	£3,586,000
	Rx.
For the guaranteed lines	2,162,000 interest
	1,642,000 exchange
	Rx. 3,804,000
To pay in sterling	Rx. 2,162,000

Railways.

	Rx.
Deficit on State lines brought down - - -	494,000
,, ,, guaranteed lines - - -	1,062,000
Add charge of surveys and central establishment -	71,000
Charge on the taxpayer - - - -	1,627,000
Deduct excess of receipts over charges of subsidised companies - - - - -	7,000
Net charge on the taxpayers - - -	1,620,000

198. This charge requires further examination.

1. It is clear, in the first place, that, apart from exchange, there was a considerable profit on the railway account of (actually) Rx. 2,747,000, and the value of the rupee in exchange is therefore the principal factor in determining whether the railway account will show a loss or a profit to the State. Since the closing of the mints the gold value of the rupee has slowly risen. It is now about 1*s.* 4*d.*, and on the introduction of the gold standard into India the exchange value of the rupee will approximate to that rate. It is, therefore, interesting to ascertain what would have been the financial result to the taxpayers in 1895-6, if, in that year, the rupee had exchanged at 1*s.* 4*d.* In that case 3,586,000*l.*, payable at home in sterling, would have cost Rx. 5,379,000. The actual cost in 1895-6 was Rx. 6,311,000. This economy of Rx. 932,000, would have converted the deficit of Rx. 494,000 into a surplus of Rx. 438,000.

In like manner, 2,162,000*l.*, payable at home in sterling on the guaranteed lines, would have cost Rx. 3,243,000; the actual cost in 1895-6 was Rx. 3,804,000, and this economy of Rx. 561,000 would have reduced the deficit of Rx. 1,062,000 to Rx. 500,000. The net deficit on the State and guaranteed lines, taken together, would have been Rx. 63,000. Add the further charge of central establishment and surveys, minus excess receipt on subsidised companies, Rx. 65,000*, and the total charge on the taxpayer in 1895-6 would have been only Rx. 127,000.

Thus, with exchange at 1*s.* 4*d.*, the railway account, as presented in Sir H. Fowler's return in 1895-6, would have been almost in equilibrium, and the charge on the taxpayer would have been reduced to a minimum.

2. Some questions, however, arise on the railway account, as presented. Under the head of interest *paid in India* on account of State railways, a sum of Rx. 3,701,000 is charged. We gather from the finance accounts that that interest is charged at the rate of 4 per cent. But if this is so, and to the extent that this is so, it appears to us that an excessive charge is raised against Indian railways, for India borrows money at a much cheaper rate. Again, a part of the capital expenditure on railways has been defrayed from revenue. In the accounts between the State and the railways, this expenditure out of revenue is, of course, carried to capital account and charged with interest, but it is not borrowed money, and the taxpayer does not pay interest upon it. We should like to be assured that no such charge is included under the head of interest paid in India in Sir H. Fowler's return. If under that head any interest is charged at 4 per cent., or if any interest is charged in respect of contributions in past years from revenue, corresponding deductions should be made before we can state the true present charge on the taxpayer.

Account 49 B., p. 116, Finance Accounts of 1893-4.

3. The railways are presented in Sir H. Fowler's return, and justly so, as a commercial service; but, if so, the true commercial result should be clearly and accurately shown. We cannot think that the account, as now drawn in the return, satisfies that requirement; for, first, it includes under State lines military frontier railways, which do not even pay their working expenses. Such railways are not, in any sense, commercial undertakings. They form part of the apparatus of defence, and together with fortresses, should be charged as part of military expenditure. Secondly, it includes railways built, not as commercial undertakings or with a view to a commercial return, but as a protection against famine. We think that a return which deals with railways as a commercial service should draw a clear distinction between commercial railways, properly so called, on the one hand, and military and

---

	Rx.
* Surveys - - - - - - - -	72,000
Surplus on subsidised companies - - - -	7,000
	65,000

protective railways on the other, in order that the taxpayer may understand the true result of his trade undertakings. Sir Henry Fowler's return gave, for 1893–4, a net deficit of Rx. 1,535,000 on the railway account, and Mr. Jacob laid before us a statement showing for that year an analysis of the deficit as distributed between commercial, military, and protective railways. Railways. Appendix, No. 27, Vol. II., p. 224.

	Rx.
Commercial railways deficit - - - -	51,000
Military railways - - - -	612,000
Protective railways - - - - -	765,000
Miscellaneous, chiefly survey charges, which cannot be distributed - - - - -	107,000
Total - - - - -	1,535,000

Thus, the true commercial railways showed a very small deficit, even after defraying the heavy charge of exchange.

4. The railway account is charged with interest on capital expended upon railways in progress, and therefore not earning any return. Mr. Jacob informed us that in 1893–4 Rx. 9,000,000 of capital, and in 1894–5 Rx. 11,000,000, was so engaged. Thus, railways already open and in working order had not only to earn their own charges, but they carried practically a dead weight of interest in 1894–5, which was probably equivalent to Rx. 350,000 or more.

5. The head of interest paid in England includes the sinking fund and East Indian Railway Annuities expiring in 1953, 1957, and 1958, amounting, we believe, to a sum approaching 200,000*l.*

Summary.

199. We may now sum up our review of the railway finance of the Indian Government in its relation to the Indian taxpayer.

1. Indian railways, working as a whole and including military and protective lines, pay their maintenance and interest on capital employed in their construction, and provide Rx. 300,000 or 400,000 for interest on capital sunk for the moment on lines under construction; they provide also a considerable sinking fund for one class of their indebtedness; yet earn, in addition, a large surplus, if the cost of exchange be for the moment excluded.

2. If the charge of exchange be included, this surplus is not only absorbed, but a deficit of Rx. 1,620,000 and more is incurred and falls upon the taxpayer.

3. If the military and protective lines which are not in any sense commercial undertakings are kept distinct, the true commercial lines earn enough to pay their own charges and the heavy cost of exchange, and to provide besides the interest on capital sunk for the moment in unfinished railways and the sinking fund described above, leaving only a small deficit of 100,000 to 150,000 Rx. to be met by the taxpayer.

4. If the gold value of the rupee approximated to 1*s.* 4*d.*, the true commercial lines after meeting the charges enumerated in the previous paragraph would show a substantial surplus.

5. If the rupee attained that value, the State railways as a whole, including military and protective lines, would nearly meet all their charges, leaving only a comparatively slight deficit for the taxpayer.

Lastly, if the interest brought to account in Sir H. Fowler's account as paid in India be based in all or in part on 4 per cent. as the rate of interest, or if interest is charged on surplus revenue laid out in former years on the construction of railways, the charge on the present and future taxpayers should be proportionately reduced, and the favourable results which we are now summarising, would be proportionately improved.

200. The policy under which capital expenditure amounting to Rx. 288,000,000* has been incurred must give opportunity for wide differences of opinion. Some may think that progress has been too fast, some that it has been too slow. There may be legitimate questions as to the manner in which money for these great works has been raised, or as to the amount of outlay on working expenses. There is no necessity for us to enter on these questions. We deal with the facts as they are, and on these facts we think that the Indian taxpayer of the present obtains, even on the

* *See* Administration Report on the Railways in India for 1898–9, page 8, paragraph 9.

Railways.

railway account as presented in Sir H. Fowler's return, the benefit of a vast railway system at a comparatively light cost; that the fall in exchange has subjected the financial result of the Government railway policy to very severe trial; that, if the loss on purely military lines were transferred to military expenditure, and, if the charge of famine protective lines and of lines under construction were eliminated, there would be no charge on the taxpayer—in other words, that the true commercial lines pay their way; and that there is a fair prospect with improved exchange that the charge on the taxpayer will, even on the account as at present presented, entirely disappear. If a fair and constant surplus should hereafter be realised, it will be reasonable subject for consideration whether larger sums might not with advantage be devoted to improvement of the lines, but we quite understand that the Indian Government make it an object in the first instance and within reasonable limitations to relieve the taxpayer of any charge in respect of railway administration.

IV.—Expenditure on Defence and Foreign Affairs.

(*a*) *General Remarks.*

201. We now come to the second of the two great sections into which we have divided the Indian Budget of expenditure, viz., defence and foreign affairs. We compare, in the first place, the cost of these services, as far as we can ascertain it in 1856–7, the year before the Mutiny, with their cost in 1862–3, the year in which the Mutiny expenditure had come to an end, and in which, therefore, a normal rate of expenditure under the new form of government had been established.

Parliamentary Paper, No. 354 of 1862, p. 10.

The Indian Government, in their despatch of 2nd May 1861, stated that, in April 1857, or immediately before the Mutiny, the total established strength of the Indian Army was:—Europeans, 45,522; natives, 266,852; and military police, 38,977.

"The cost of this army was, in round numbers, 11,500,000*l.* a year in India, and "1,250,000*l.* in England; but this was below the proper cost, as it was only attained "by allowing the 'effective' European force to remain dangerously below its "'established' strength. The real cost should have been about 12,000,000*l.* in India."

Parliamentary Paper, No. 86 of 1881, Appendix p. 112.

The actual gross cost of the Army in India in 1856–7 was 11,492,000*l.* The departmental military receipts amounted to 502,000*l.*, leaving a net charge on the taxpayer of 10,990,000*l.* If we add the additional service which the Indian Government thought necessary in order to arrive at the proper cost of the Army, we shall have a net charge for the Army in India, before the Mutiny, of 11,500,000*l.* The actual Home charges of the Indian Army in 1856–7 were 1,990,000*l.** The charge for military works in 1856–7 was Rx. 747,000; but this was unusually high, the average of the four years before the Mutiny being over 560,000*l.* There was no separate item of political charges in 1856–7. At the close of the Mutiny they appear to have varied from Rx. 170,000 to Rx. 190,000. On these data we may estimate the normal net cost of defence and foreign affairs before the Mutiny:—

	£
Army in India	11,500,000
Home charges	1,990,000
Military works (average)	560,000
Estimated contribution to military pension fund, say	100,000
	14,150,000
Add Marine, say	790,000
Political charges, say	100,000
	15,040,000
Total defence and foreign affairs expenditure before the Mutiny, say	15,000,000

In 1861–2 the Mutiny expenditure came to an end. The net military expenditure in India in the year 1862–3 was Rx. 11,726,000, and we shall show that a normal rate of expenditure had then been reached.

The Home charges were 2,640,000*l.*

* Account of Home charges in Appendix to Blue Book, Reduction of expenditure in India, 1885.—Statistical Abstract, 1840–65, p. 70. There are some receipts to be set against the charge for works—possibly Rx. 30,000 to Rx. 40,000.—On the other hand the cost of establishment and plant does not appear to have been included.

The charge for military works was Rx. 598,000, subject to the remark in the note on the charge for military works in 1856–7.

On these data we estimate the net cost of defence and foreign affairs in 1862–3, as follows :—

	£
Army in India - - - - - -	11,726,000
Home charges - - - - -	2,640,000
Military works - - - - -	598,000
Contribution to pensions charged on military fund, say -	100,000
	15,064,000
Marine - - - - - -	486,000
Political - - - - - -	313,000
	15,863,000

The charge therefore of defence and foreign affairs before the Mutiny may be estimated at Rx. 15,000,000; on the close of the Mutiny at Rx. 15,860,000.

The last named amount is the starting point for our comparison.

We consider, first, the course of military expenditure in India from 1862–3 to 1896–7, secondly, the Home charges of the Indian Army during the same period.

(*b*) *Army Expenditure.*

(1.) *In India.*

202. The total net expenditure in India* on the Army was, in the years which we have selected, as follows:—

	£		£
1856–7 - -	11,500,000	1892–3 - -	14,799,000
1861–2 - -	12,726,000	1893–4- - -	15,197,000
1862–3 - -	11,726,000	1895–6 -	17,275,000
1875–6 - -	10,787,000	1896–7 - -	16,437,000
1884–5 - -	11,293,000		

It will be seen that the expenditure divides itself into two well-marked periods, the first ranging from 1862 to 1884, the second from 1884 to 1897.

The First Period.

203. During the first period military expenditure in India was stationary. In 1862–3 it was 11,726,000, and we may say that the average expenditure during the 16 years from 1862 to the Afghan war was a little less than Rx. 11,600,000, although that period included two years of somewhat high expenditure, 1864 and 1865, while the expenditure in the two years succeeding the year of the Afghan war expenditure, 1883 and 1884, averaged only 11,171,000. The expenditure in the closing years of the period was, therefore, less than at the outset. This result was chiefly due to the efforts of the Indian Government for economy. In 1879 they appointed a powerful commission under Sir Ashley Eden, to inquire into the organisation and expenditure of the army in India. In their letter of instruction to the President of the Commission they stated that the heavy loss in the revenue of India, caused by the unfavourable rate of exchange, had rendered extensive reductions in public expenditure imperatively necessary, and that the Commission was appointed to assist the Government in determining what share of this unavoidable reduction could be borne by the military charges without injury to the general efficiency of the Army. In consequence of the recommendations of this Commission, reductions amounting to a net sum of Rx. 1,032,000 were effected. During the latter part of this period the exchange on England was falling. The rupee, which in 1862–3 had been worth nearly 2*s.* in exchange, fell in 1884–5 to 1*s.* 7½*d.*, and the charge of the British soldier, who was entitled to receive his pay in sterling or its equivalent in rupees, increased correspondingly.

* In 1884–5 and the subsequent years the fall in exchange entailed additional payments in India (included in the above figures) on account of the pay of British troops and compensation to officers (*see* paragraph 205 (*a*)) amounting in—

	Rx.		Rx.
1884–5 to - - -	184,000	1895–6 to - -	1,726,000
1892–3 „ - - -	612,000	1896–7 „ -	1,500,000
1893–4 „ - -	1,117,000		

The Second Period.

Army Expenditure in India.

204. The second period shows an increase in expenditure of rather more than 45 per cent. The period is marked by a heavy fall in exchange, by an increase of 10,000 men in the British force, and 20,000 men in the Native Army, by the acquisition of Burma and by several expeditions.

Appendix, No. 45, Vol. II., p. 171.

205. The Indian Government describe thus the causes of increase in the second period :—

a. Fall in the rate of sterling exchange for the pay of British troops, &c. The fall in the exchange was from 1*s.* 7½*d.* in 1884–5 to 1*s.* 2¾*d.* in 1893–4, involving an increased payment of Rx. 1,117,900, including compensation to officers (which, with a further fall in the exchange to 1*s.* 1½*d.*, had increased in 1896–7 to Rx. 1,500,000).

b. Increased annual cost of requirements of troops owing to augmentation of strength, and the provision of improved weapons, resulting in :

(1) increased purchases of horses;

(2) increased clothing supplies (clothing material is bought to a greater extent in India than formerly);

(3) increased medical supplies (more medical supplies are bought now in India than formerly);

(4) increased supervision at and out-turn from ordnance factories, depôts, and arsenals; additional ammunition is issued, because the scale of annual practice is increased; increased employment of skilled artizans for charge of ordnance in coast defences; increased cost in connection with the issue of ammunition and equipments to troops of Native States;

(5) improved musketry instruction;

(6) the maintenance of a larger supply of transport animals, carts, and gear, and increased establishments for their care to secure celerity in the mobilisation of the army;

(7) the gradual increase of the volunteer force;

(8) more rewards for military services due to field operations;

(9) the working of the new pension rules for the native army (1886).

Sir E. Collen also laid stress on the increase of expenditure in improving the sanitary conditions of the military stations.

206. He analysed for us the progress of the different grants through which the military expenditure of India is distributed, between the years 1875 and 1893.

The three principal grants are—

—	1875–6.	1884–5.	1893–4.
	Rx.	Rx.	Rx.
No. 3. Pay and allowances - -	6,500,000	6,170,000	7,890,000
„ 4. Commissariat - -	1,941,000	2,202,000	3,403,000
„ 10. Ordnance - - -	571,000	497,000	830,000
	9,012,000	8,869,000	12,123,000

These services make up three-quarters, or more than three-quarters, of the total expenditure.

207. *Grant* 3. *Pay and Allowances.* — Certain medical establishments, costing Rx. 247,000, were transferred, in the first period, from this grant to Grant 9, Medical Services. Improvements were made in the Native Army costing Rx. 120,000. Reduction gradually took place in the number (redundant) of officers kept on the active list after the Mutiny, and some of the reductions recommended by the Army Re-Organisation Commission were carried into effect.

The increase in the second period is due to the causes described at large in the preceding paragraph.

208. *Grant* 4. *Commissariat Establishments, Supplies, and Services.*—The increase in the first period is almost entirely due to the fact that in 1875–6 the greater part of the malt liquor required for the troops was imported from England, and therefore appeared under the head of expenditure in England. In 1875–6 beer was bought locally in India to the value of Rx. 41,527, and imported from England to the value of Rx. 271,760. At the close of the period there was practically no import from England. There were, however, in that period other causes of increase, such as the creation of a transport establishment after the Afghan war, and increase of cost in price of provisions, or in the allowances granted in lieu of provisions. Such increases appear to have been balanced by reductions on other heads.

Army Expenditure in India.

Appendix No. 48, Vol II., p. 188

The second period shows an increase of Rx. 1,201,000 over the first. The increase in the Army will account for a part; the remainder represents the result of an increase of cost in articles of consumption. The Native soldier is entitled to draw compensation for dearness of provisions when the aggregate cost of his food exceeds 3 rupees 8 annas, which is held to represent the normal monthly cost of his ration. Charges for compensation must be based upon the prices of food-grains current in the nearest large market, authenticated by the civil officer in charge of the town or district. Sir E. Collen informed us that the Military Department had been unable to separate the increase of charge due to the increase of the Native Army from the increase of charge due to rise in the price of provisions, and we can understand the difficulty of ascertaining the true financial results of additions to the food allowance, which vary or may vary with every station in India. The increase in the Native Army between 1875 and 1893 was 17½ per cent.,* while the items of provision for Native soldiers and compensation to Native soldiers for dearness of provisions, rose from Rx. 65,000 to Rx. 539,000; an increase of Rx. 474,000; but we do not know how these figures compare with the normal allowance for provisions included, we understand, with the pay of the Native forces. The increase as shown is very large, and we think that, as the extra allowance is intended only to countervail a real increase in price, the Indian Government should ascertain whether it only effects that object. The other main causes of increase in this grant arise on (1) the charge in the transport arrangements, and (2) the charge of feeding animals.

Appendix No. 15, Vol. II., p. 185.

Grant 10.—*Ordnance Establishments, Stores, and Camp Equipage.*

209. The expenditure was fairly stationary during the first period. The second period is marked by the development of manufacture in India and increase in cost of ammunition and equipments. One notable point is the substitution of purchases in India for purchases at home.

210. We only note certain points in the remaining grants.

211. *Grant* 5.—*Remount and Veterinary Grant.*

1875.	1884.	1893.
Rx. 162,000	Rx. 159,000	Rx. 298,000

There would have been an increase in the first period, but for transfers which were made from this to other grants. The old stud department was abolished, and replaced by the new army remount establishment. The Government no longer breeds horses, it encourages breeding at apparently an increased charge of Rx. 100,000. In dealing with all these grants the increase of the army in the second period must always be borne in mind.

212. *Grant* 6.—*Clothing.*

1875.	1884.	1893.
Rx. 115,000	Rx. 139,000	Rx. 243,000

* From 123,867 to 145,636 of all ranks.

Army Expenditure in India.

The increase in the first period is largely due to the Government buying in India materials previously bought at home.

—	1884.	1893.
	Rx.	Rx.
The clothing bought in India, cost -	139,000	243,000
" " " England, cost -	291,000	331,000

In the second period considerable changes were made in the clothing system for the advantage of the soldier, but the payment for exchange was increased by Rx. 74,000. It is not, however, clear that the changes were altogether economical.

213. *Grant* 8.—*Martial Law.*

1875.	1884.	1893.
Rx.	Rx.	Rx.
32,000	28,000	41,000

Considerable reductions took place in the first period, which were reversed in the second.

214. *Grant* 15.—*Volunteer Corps.*

1875.	1884.	1893.
Rx.	Rx.	Rx.
15,000	68,000	177,000

215. *Grant* 18.—*Military Pensions to Natives.*

1875.	1884.	1893.
Rx.	Rx.	Rx.
513,000	664,000	726,000

Improved pensions were given in 1878. The Afghan war led to an increase in the pension list.

216. *Grant* 20.—*Departmental Pensions.*

1875.	1884.	1893.
Rx.	Rx.	Rx.
23,000	45,000	60,000

The increase is due to reorganisations.

217. Thus the marked distinctions which characterise the two periods as a whole, apply also to the chief grants when examined in detail. Expenditure during the first period is stationary; the second period is an advance along the line.

(2.) *In England, excluding Exchange.*

218. The total net Army expenditure at home was in:—

	£		£
1856–7 - - -	1,898,000	1892–3 - - - -	4,842,000
1861–2 - - -	2,525,000	1893–4 - - -	4,368,000
1862–3 - - - -	2,640,000	1895–6 - - -	4,060,000
1875–6 - - -	3,476,000	1896–7 - - - -	4,133,000
1884–5 - - -	3,907,000		

This expenditure was divided into effective and non-effective charges.

219. (i.) *Effective Charges.*

Army Expenditure in England.

	1856–7.	1862–3.	1875–6.	1884–5.	1895–6.	1896–7.
	£	£	£	£	£	£
Payments to Home Government on account of British forces in India.	250,000	675,000	319,000	530,000	†681,000	708,000
Pay of regiments proceeding to and from India.			18,000	9,000	11,000	11,000
Furlough allowances -	158,000	173,000	318,000	234,000	306,000	319,000
Transport service -	46,000	140,000	267,000	308,000	242,000	206,000
Miscellaneous payments	72,000	21,000	2,000	7,000	19,000	9,000
Stores for India - -	*say 600,000	*say 500,000	1,095,000	462,000	495,000	524,000
	1,126,000	1,509,000	2,019,000	1,550,000	1,754,000	1,777,000

Three causes have contributed to the increase upon the first head. (1) The increase of the British Army in India since 1884–5. (2) The increase in the capitation rate per effective man paid to the Home Government in respect of recruiting, training and other depôt services. Upon the advice of Committees appointed to inquire into the subject, the capitation rate has (to put the case briefly) been raised from 4*l.* 12*s.* 6*d.* in 1875–6 to 7*l.* 10*s.* in recent years. This point will be more fitly considered under the head of apportionment of charge. (3) The introduction since 1875 of deferred pay, amounting to more than 200,000*l.*

Appendix No. 13, Vol. II., p. 173.

Upon the third head, furlough allowances, we understand that the rates of furlough pay have been somewhat reduced, although the amount of leave granted is more liberal. At all events, this head of service is not increasing.

There has been considerable variation on the fourth head—transport service. Formerly vessels belonging to the Government of India were employed on this service. It is now conducted by hired vessels. But the cost previous to and apart from this charge has diminished of late years. The average gross charge for 12 years, 1875 to 1886, was 338,000*l.*, and of six years, 1887 to 1892, was 238,000*l.* Thus a great decrease took place during the time that the Indian troopships were conducting the chief part of the service. The Indian Government would have preferred to employ some of their own Indian Marine vessels as well as hired ships for the purpose. The low freights that have ruled for many years doubtless encouraged the opinion that the hiring system would be economical. The charge is apparently not expected to increase under ordinary demands of the service.

Q. 6722.

Q. 2574.

We have mentioned more than once that it is the policy of the Indian Government to buy their stores in India, whenever that course is economically practicable. In 1875–6 army stores, costing 1,096,947*l.*, were sent to India. During the 12 years from 1878–9 to 1889–90 the cost of these stores averaged 612,645*l.* During the next three years they averaged a little over 1,000,000*l.* This temporary increase is due, we understand, to the arming of the troops with new weapons. In 1897–8, the charge for stores fell to rather under 530,000*l.* The following figures illustrate the course of supply from England under the different heads:—

H.C. 20 of 1894.

	Clothing.	Medical.	Commissariat.	Ordnance and Miscellaneous.	Malt Liquor.	Total.
	£	£	£	£	£	£
Average of five years 1885 to 1889 -	253,000	33,000	45,000	269,000	21,000	621,000
Average of three years 1890–2 -	213,000	41,000	42,000	707,000	5,000	1,008,000

Appendix No. 13, Vol. II., p. 173.

* In these years the accounts did not show *military* stores separately. The *total* expenditure on stores was in 1856–7 Rx. 958,070; in 1862–3 Rx. 696,000.

† Including 11,000*l.* for arrears.

Army Expenditure in England.

220. (ii.) *Non-effective Charges.*

	1856–7.	1862–3.	1875–6.	1884–5.	1895–6.	1896–7.
	£	£	£	£	£	£
1. Payments to Home Government on account of British forces in India.	60,000	233,000	350,000*	800,000	430,000	469,000
2. Pay of non-effective Colonels of Royal Artillery.	—	—	(included in effective charges in this year)	31,000	24,000	23,000
3. Pay and pensions of non-effective and retired Indian officers.	629,000	794,000	984,000	1,424,000	1,755,000	1,768,000
4. Miscellaneous pensions	83,000	104,000	123,000	102,000	97,000	96,000
	772,000	1,131,000	1,457,000	2,357,000	2,306,000	2,356,000

* The capital sum paid in this year was unduly small.

Under item 1 we cannot compare the payments made before 1884–5 with the payments made in the year 1892–3, because under the system in force between 1870 and 1884 inclusive, India extinguished the liability for her share of the pension of a British soldier who had served in India by the payment of a capital sum down.

In 1885 the system was changed, the principle of a capital payment was abandoned, and she now pays yearly her share of the pension of each pensionable soldier retiring since 1st April 1884. As the pensions of soldiers retiring before that date had been commuted, the present arrangement has not yet attained its normal proportions, and an increase must be expected. On the other hand, soldiers' pensions under the short service system constitute a charge much less than that which would have accrued under the long service system.

Thus effective comparison can only be instituted between the three last items in the account, and, making an addition in the year 1875–6 for item 2, we get the following round figures:—

1856–7.	1862–3.	1875–6.	1884–5.	1895–6.	1896–7.
£	£	£	£	£	£
713,000	898,000	1,140,000	1,557,000	1,876,000	1,887,000

The increase under item 3, "Pay and Pensions of Indian Officers," is very formidable.

Appendix No. 24, Vol. II., p. 221.

Mr. Jacob placed before us a return analysing this increase in various years between 1875–6 and 1893–4. The return is divided into two chief heads, viz., "Colonels' allowances" and "Retired pay." In 1875–6 there were 201 officers drawing Colonels' allowances to the amount of 210,134*l.* In 1893–4 there were 501

Q. 10,714. officers, drawing 535,668*l.* We understand that the increase is due to the decision under which all officers of the Staff Corps, whatever their position, became entitled to Colonels' allowances after 38 years' service. The charge is still rising, and the Indian authorities compute that it will not reach its maximum till 1900 or 1901. It will be seen that the pension averages more than 1,000*l.* a year for each officer, and it is attainable as a matter of course by all officers who entered the service before 1881. It is undoubtedly a very heavy charge on the taxpayer.

Under the head of retired pay there is an increase of 475,000*l.* It appears to be due chiefly to an increase in the scale of pensions, as the numbers under most of the ranks are stationary; for instance, in 1875–6 there were 1,399 infantry and cavalry officers of the Staff Corps, drawing pensions amounting to 403,499*l.* In 1893–4 there were only 1,370 such officers, yet they drew 611,848*l.*, an increase of more than 50 per cent. of charge for a somewhat smaller number of officers. Again, in 1875–6 418 medical officers drew 126,683*l.*, and in 1893–4 431 medical officers drew 192,167*l.* In 1875–6 97 ecclesiastics drew pensions amounting to 27,286*l.*, while in 1893–4 151 ecclesiastics drew 46,433*l.*

Mr. Jacob informed us that the scale of pensions for all ranks of the Staff Corps was increased, adding that special pensions were offered with a view to reduce the ultimate charge for Colonels' allowances—a point to be remembered when the actual charge of the colonels' allowances is considered. Army Expenditure in England. Q. 10,716.

The pension charge of the ecclesiastical section appears to us remarkable. The non-effective charge was 27,286*l.* in *sterling* 1875–6, and no less than 46,433*l.* *sterling* in 1892–3, and, if the cost of exchange be taken into consideration, the charge on the taxpayer is very heavy. In 1875–6 there were 97 ecclesiastics on pension; in 1893–4 there were 151 on pension, a great increase on an active establishment, which is comparatively stationary in its strength. We gather that the ecclesiastical chapter in the military budget only provides for Presbyterian and Non-conformist clergy, and Roman Catholic priests, attached to particular regiments; the clergy of all denominations not so attached are paid from the civil ecclesiastical grant, and Mr. Jacob informed us that there were 147 fully paid chaplains on the civil establishment in 1895–6. If we make allowance for the comparatively small number of chaplains of other persuasions, we believe that the number of ecclesiastics on pension must bear an unusual proportion to those on active service.

We recommend that in the case of this grant, as in that of the civil pension grants, an actuarial report should be obtained, showing the amounts under the present regulations which may be expected to represent the normal non-effective charge of retired officers, and the proportion which non-effective service will bear to effective service for each class of officers.

The Miscellaneous Pensions consist, in part of a diminishing charge, in part of Indian Service family pensions, of which the charge increases, but the payments are said to be met from subscriptions realised. Appendix No. 13, Vol. II., p. 168.

Exchange.

221. In the earlier years exchange was fairly steady at about 2*s.* to the rupee. In 1875–6 the exchange had only recently begun to fall, and only Rx. 3,858,000 were needed to pay the home charge of 3,476,000*l.* In 1884–5 Rx. 4,856,000 were needed to pay the home charge of 3,907,000*l.* In 1895–6 Rx. 7,146,000 were needed to pay the home charge of 4,060,000*l.* In 1896–7 Rx. 6,865,000 were needed to pay the home charge of 4,133,000*l.*

The practice of the Indian Government, as we have said, is to measure the additional burthen thrown upon the Indian Exchequer by the difference between the number of rupees required to meet the sterling charge at 2*s.* to the rupee and the number of rupees actually required to meet the payment. For instance, that difference would be represented in 1875–6 by Rx. 382,000. But we have pointed out that upon the ratio of 1 to $15\frac{1}{2}$ formerly prevalent between gold and silver, the rupee was only worth 1*s.* $10\frac{5}{8}d.$; and that the rupee during the 12 years ending with 1872–3 realised, on the average, only 1*s.* $11\frac{3}{8}d.$ If the standard value of the rupee were taken at 1*s.* $10\frac{5}{8}d.$ the difference would be reduced to Rx. 171,000; if at 1*s.* $11\frac{3}{8}d.$ to Rx. 289,000. Thus, in recent years, after making allowance for the difference between the average value of the rupee in former times, and its conventional valuation, the loss was very great, especially if the addition to the British soldiers' pay in India consequent on the fall in exchange be taken into reckoning, for in 1885–6 the Indian authorities calculate this increasing charge to have been Rx. 224,000, in 1892–3 Rx. 592,000, and in 1895–6 Rx. 1,156,000. The extra burthen on the taxpayers applies especially to pensions. In the case of stores, the low prices which have prevailed in England may have afforded some set-off against the larger number of rupees required for the purchase of stores here, but no corresponding set-off can be found for pensions and similar dead-weight charges payable at home.

At the beginning of this section, dealing with army expenditure in England, we stated the net expenditure in certain years *excluding* exchange. We now give the net expenditure in England *including* exchange:—

	Rx.		Rx.
1856–7	1,898,000	1892–3	7,756,000
1861–2	2,525,000	1893–4	7,207,000
1862–3	2,640,000	1895–6	7,146,000
1875–6	3,858,000	1896–7	6,865,000
1884–5	4,856,000		

Army Expenditure in England and India.

222. We state also the whole Army expenditure charged to the Army Budget in India and in England, including exchange:—

	Rx.		Rx.
1856–7 - -	13,398,000	1892–3 - -	22,555,000
1861–2 - -	15,251,000	1893–4 - -	22,404,000
1862–3 - -	14,366,000	1895–6 - -	24,421,000
1875–6 - -	14,645,000	1896–7 - -	23,302,000
1884–5 - -	16,149,000		

(3.) *Military Works.*

223. Military works are not provided in the Military Budget, but their cost must, of course, be added to the expenditure of the Army. The net figures are as follows:—

	Rx.		Rx.
1856–7 - - (say)	600,000	1892–3 - -	1,152,000
1861–2 - -	511,000	1893–4 - -	1,135,000
1862–3 - -	598,000	1895–6 - -	1,156,000
1875–6 - -	1,321,000	1896–7 - -	1,096,000
1884–5 - -	909,000		

(4.) *Special Defences.*

224. Expenditure was also incurred on special defence works:—

	Rx.		Rx.
1856–7 - -	——	1892–3 - -	458,000
1862–3 - -	——	1893–4 - -	325,000
1875–6 - -	——	1895–6 - -	101,000
1884–5 - -	——	1896–7 - -	95,000

(5.) *Military Pensions formerly payable from certain Military Funds.*

225. We noted in the section of our Report which deals with the expenditure on Civil pensions, that that chapter of the Budget contained provision for military pensions, formerly payable out of certain military Funds. There were four of these Funds—the Bengal Military Fund, the Madras Military Fund, the Bombay Military Fund, and the Bengal Military Orphan Fund.

Appendix, No. 34, Vol. II., p. 231.

When the local Army for India was discontinued, and the Staff Corps was organised, the Secretary of State announced that the Government would assume charge of these Military Funds, as far as might be necessary to maintain existing pensions and to secure to subscribers and their families the benefits to which they were entitled under the former system, the assets being taken over by the Government, but subscriptions at the existing rates continued. Requisite powers for this object, by the Act 29 Vict. c. 18, and the transfer, were effected in September 1866. The capital of the Funds at that date amounted to Rx. 3,170,198.

The securities constituting this capital were transferred to the Government, and each year a part of the capital was applied sufficient to meet the net charge of the pensions after deduction of subscriptions, until each Fund was exhausted. The capital was thus absorbed long before the pensions had reached their maximum figure.

Appendix, No. 34, Vol. II., p. 230.

Mr. Jacob has analysed the charge incurred by the State upon each of the Funds for the years 1875–6 and 1893–4, with the following general result:—

——	1875–6.	1893–4.
	Rx.	Rx.
Gross charge, including Exchange - -	603,079	992,738
Subscriptions and contributions from Capital -	466,159	164,527 (subscriptions only).
Net charge - -	136,920	828,211

	Rx.
Net exchange, 1875–6 - - - -	46,140
1893–4 - - - -	330,760

Mr. Jacob stated that the net charge was still increasing in 1896, but that it was approaching its maximum, and would in a few years begin to diminish and would eventually disappear.

We do not think that the course adopted by the Indian Government was sound economically, or just to the general taxpayer. Governments not unfrequently undertake supervision over the expenditure of subordinate authorities in order to "guard the inheritance," that is, to check any tendencies on the part of the authority to favour the taxpayer of the present at the expense of the taxpayer of the future. It is a sound rule, and we fear that in this case the Government of 25 or 30 years ago transgressed it to the damage of the present taxpayer. On the one hand, it must not be forgotten that subscribers to the fund had, with the assistance of the Government, provided a fund which, if administered with due regard to the interest of the taxpayer, would be greatly diminishing the charge at the present time. On the other hand, the Government gave the fund away, and the taxpayer of the present has to bear the dead weight of the whole burthen.

(6.) *Military Railways.*

226. One other item of Military expenditure requires notice. In a former section of our Report we endeavoured to show the financial result to the taxpayer of the railways which the Indian Government had undertaken as productive works, and we drew a distinction between commercial railways, properly so called, and railways constructed for military purposes. We propose in this summary of military charges to class the latter, which do not in many cases even pay their working expenses, with military works, and to consider the deficit arising upon them as part of the Military expenditure of India. The Indian Railway Accounts formerly did not separate the finance of the military lines from that of the commercial lines. Mr. Jacob, however, analysed for us the deficit on the Railway Account in the years 1885–6, 1889–90, and 1893–4, and he calculated that the net cost of military lines to the Government was Rx. 95,272* in 1885–6, Rx. 389,928 in 1889–90, and Rx. 612,269 in 1893–4.

Appendix, No. 34, Vol. II., p. 224.

(7.) *Summary of Army Expenditure.*

227. We are now in a position to state approximately the whole of the military expenditure in the years 1856–7, 1861–2, 1862–3, 1875–6, 1884–5, 1895–6, and 1896–7:—

—	1856–7.	1861–2.	1862–3.	1875–6.	1884–5.	1895–6.	1896–7.
	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.
Net Army expenditure	13,398,000	15,250,000	14,366,000	14,645,000	16,149,000	24,421,000	23,302,000
Military works -	say 600,000	511,000	598,000	1,321,000	909,000	1,156,000	1,096,000
Special defence works	—	—	—	—	—	101,000	95,000
Pensions formerly charged on Military Funds - - -	say 100,000	say 100,000	say 100,000	137,000	482,000	876,000	840,000
Net cost of military lines to taxpayer -	—	—	—	156,000	–25,000	658,000	640,000
Total -	14,098,000	15,861,000	15,064,000	16,259,000	17,515,000	27,212,000	25,973,000

Army receipts were high in 1875–6, and the pensions formerly charged on Military Funds, if they had not been aided by a contribution from the capital of those funds, would have been higher by Rx. 194,000.

* Only one section of the military lines was open in this year, and a separate return for it could not be obtained; that section, therefore, is included in the commercial lines for that year. The Administration Reports give the net cost of all military lines as Rx. 464,408 in 1889–90, Rx. 606,127 in 1893–4, and Rx. 640,506 in 1896–7.

(c.) *The Indian Marine.*

228. The Indian Marine budget includes pilotage and other services, which may more properly be classed as belonging to Civil administration; but as those services are covered, or to a great extent covered, by receipts, the net expenditure represents, we think, approximately Navy charges.

Gross Effective Charge.	Receipts.	Year.	Effective Net Charge, including Exchange.	Non-Effective.*	Total.
Rx.	Rx.		Rx.	Rx.	Rx.
596,000	230,000	1875–6	366,000	70,000, including exchange.	436,000
532,000	166,000	1884–5	366,000	74,000 „ „	440,000
857,000	157,000	1892–3	700,000	98,000 „ „	798,000
754,000	152,000	1893–4	602,000	93,000 „ „	695,000
743,000	169,000	1895–6	574,000	97,000 „ „	671,000
720,000	160,000	1896–7	560,000	95,000 „ „	655,000

* NOTE.—The Marine Pension charge is made up of various items:—

	1875–6.	1884–5.	1892–3.	1893–4.	1896–7.
	Rx.	Rx.	Rx.	Rx.	Rx.
1. The Indian Navy fund pensions paid in England, with the other pensions formerly charged on special funds (an expiring charge)	9,392	25,597	33,812	35,355	36,216
2. Pensions of late Indian Navy, paid in England under head of superannuations and allowances (an expiring charge)	55,050	28,826	33,544	30,166	26,336
3. Royal Indian Marine Pensions paid in England under head of superannuations (a new and growing charge)	—	—	9,008	8,977	12,569
4. Pensions of pilots paid in England	not shown separately.	9,416	10,037	11,260	12,109
5. Marine pensions paid in India	5,471	10,248	11,818	7,609	7,565
Total	69,913	74,087	98,219	93,367	94,795

Up to the year 1880–1 the cost of the last item was included in the charge of effective service.

Remarks on this service will find their place in the division of our Report which deals with the apportionment of charges between England and India.

(d.) *Political Service.*

229. Political service represents the cost of the Foreign Office in India. The charges included in this chapter belong to foreign policy rather than to domestic administration; we therefore class them under the head of Defence and Foreign Affairs. They comprise charges incurred on the north-west frontier, frontier levies, political subsidies to the Ameer and others, special missions. This service cost in—

	Rx.		Rx.
1856–7	119,000	1892–3	842,000
1861–2	233,000	1893–4	966,000
1862–3	313,000	1894–5	898,000
1875–6	432,000	1895–6	1,062,000
1884–5	799,000	1896–7	1,003,000

Summary of Defence and Foreign Affairs.

230. We summarise the whole expenditure incurred on defence and foreign relations.

	*1856–7.	1861–2.	1862–3.	1875–6.	1884–5.	1895–6.	1896–7.

LIBRARY OF THE BOMBAY BRANCH OF THE ROYAL ASIATIC SOCIETY

CHAPTER III.

I.—APPORTIONMENT OF EXPENDITURE BETWEEN THE UNITED KINGDOM AND INDIA.

231. We proceed to discuss, in the third place, that branch of our reference which directs us to inquire into the apportionment of charge between the Governments of the United Kingdom and India for purposes in which both are interested.

We are somewhat embarrassed as to the meaning of the phrase. The United Kingdom is, in one sense, interested in the whole Government of India, and it may be said that India is interested in the Government of the United Kingdom, but this can scarcely be the meaning of the reference.

232. There are, however, a number of services in which the two Governments are held to have a common interest. There are also claims upon India for charges incurred at home on account of the Queen's army in India. Lastly, there is the contribution which India makes on account of naval charges.

These various services may be classified as follows:—

(1.)—Civil and Miscellaneous Charges.

(*a.*) The India Office.
(*b.*) Aden.
(*c.*) The Persian Mission.
(*d.*) The China Diplomatic and Consular Establishment.
(*e.*) The Zanzibar and Mauritius Telegraph.
(*f.*) The Red Sea and Indian Telegraph.
(*g.*) The Euphrates, Tigris, and Karun River Subsidies.
(*h.*) The Eastern Mail Subsidy.
(*i.*) The Jeddah Consulate.
(*j.*) The Chiengmai Vice-Consulate.
(*k.*) Réunion and Surinam Consulates.
(*l.*) Voluntary Contributions.

(2.)—Army Charges, including the Cost of Expeditions beyond the Indian Frontier.

(3.)—Naval Charges.

(1.)—Civil and Miscellaneous Charges.

(*a.*) *The India Office.*

233. The charge of the India Office is at present borne entirely by India.

It may, however, be urged that, in a special sense, both the United Kingdom and India are interested in that organisation which exists in the capital of the Empire, and there brings together in a kind of co-ordination the Government of India and of the United Kingdom, and we have considered the question whether the charge of this organisation is not a proper subject of apportionment.

Light is thrown on this subject by a study of the treatment of similar questions in relation to Colonies, whether Crown or self-governing.

Historical circumstances explain the origin of the difference, but in relation to the Colonies the ultimate solution arrived at is:—

The United Kingdom pays the whole cost of the Committee of its own Government which represents it in relation to the Colonies.

The Colony pays the whole cost of agencies established here for the transaction of its business.

234. Upon this principle the cost of the India Office would be thus apportioned; its parliamentary representatives, with an adequate staff, would be paid by the United Kingdom, and the rest of the establishment would be paid by India.

There is, however, a difference between the two cases. The East India Company paid the whole charge of its establishment in England, including that of the Board of Control. The Crown, in taking over the government of India, took it over on existing conditions, and the present arrangement is sanctioned by tradition and long practice. Tradition and long practice have established another arrangement in the Colonies. A contribution has never been asked from them, and the great self-governing Colonies throw so little work on the Colonial Office that their share of the charge of that office would be infinitesimal. Although, therefore, in theory they might fairly be asked to contribute, it would not be worth while to raise the question with them for so small a result. The cases, therefore, are not, on examination, as parallel as they appear at first sight. It is, however, a fact that the Colonies do not contribute to the charge of the Colonial Office, and in order that there may be no ground for allegation that India is treated less favourably than other parts of Her Majesty's Empire, we recommend that Parliament should be asked to make a contribution towards the charge of the India Office. This contribution may be made the subject either of a charge on the Consolidated Fund, or of an annual vote in aid of the home charges of the establishment of the Secretary of State. A choice between the two methods of procedure involves a question of policy. These home charges amounted, in the years 1897–8, to 240,000*l*. The larger part, however, of this sum represented costs of ordinary Indian administration. The vote for the Colonial Office, including non-effective allowances, amounts to about 50,000*l*. a year; and a like amount would be, we think, a fair contribution towards the cost of the India Office.

Settlements, Missions, Consular Agencies, &c.

235. The class of charges which come next most obviously within the terms of the reference comprises the contributions to missions and consular agencies, the administration of settlements (such as Aden), and subsidies for lines of communication in which both the United Kingdom and India are interested. The countries in which the diplomatic and administrative charges arise extend from Arabia to China, and there is no doubt of the interest of India in many questions of policy connected with them; but it must be admitted that the imposition upon India of contributions towards the cost of these services connected with these places has no parallel in our relations with other Colonies and dependencies.

Canada is extremely interested in our diplomatic relations with the United States, very many, and probably the most important of the questions arising between us and the States, having their origin in Canada; but no contribution has ever been made by Canada towards the cost of the Embassy at Washington. Historical circumstances explain the origin of the present arrangement. When the East India Company was a semi-independent power with a monopoly of oriental trade, it had its diplomatic agents in the East, just as it had an army and a navy, and in later times sufficient justification for some apportionment of the charge has been found in the direct interest India has in the development of commerce in the East and in the maintenance of uninterrupted waterways. We recognise the defensibility of the principle of apportionment, but the rate of apportionment requires constant revision, first in the light of the proportion which home trade with the Far East bears to Indian trade with the same; and next in consideration of the growing interest of Australian Colonies in the maintenance of the Red Sea route.

(*b.*) *Aden.*

236. India bears at present the whole charge, civil and military, of Aden. Sir H. Waterfield, in a memorandum prepared for the Commission, stated that in 1886 the Government of India urged the propriety of the expenses of Aden being divided between Great Britain and India, and he added that, in his opinion, Great Britain should make some contribution towards the expenses of the post. Lord Roberts thought that Great Britain might pay half the charge of the garrison. On the other hand, Lord Lansdowne said that the arrangement under which India has to maintain Aden is a rough and ready arrangement, which is not without its fairness. Lord Ripon also would leave things as they are. Qq. 6523–40, 6695–700, 12,501–19, 14,879, 14,995–9, 15,708–17, 15,762–5, 16,103, 16,399, 17,821.

Appendix, No. 48. Vol. II. p. 371.

237. The military charges of Aden in 1894–5 were calculated by the Indian Government at Rx. 206,000, or Rx. 216,000 if military works were added.

	Rx.
The civil charges, including works, were - - -	52,000
The receipts - - - - - -	23,000
Leaving a deficit of - - - - - -	Rx. 29,000

238. The Indian Government contend that Aden is a post of Imperial importance, and that its occupation concerns not only the trade of Great Britain with India, but also her trade with the Australasian Colonies and the East.

The greater part of the trade with the East passes through the Suez Canal, and while it is open, there are three garrisons which guard the interests of the Empire in the route, Gibraltar, Malta, and Aden. Great Britain maintains the two first of those fortresses at her own cost. The maintenance of the third must be of great interest to India. As Mr. Jacob pointed out, if communication by the Suez Canal were stopped, Aden would naturally fall under the control of the Indian Government, and possession of the port practically enables India in time of danger to close the Red Sea against an enemy from Europe, but she could only gain this object effectively with the aid of British ships of war, the cost of which would be borne by Great Britain; nor must it be forgotten, when this subject is under consideration, that, in the event of war, the British taxpayer would be subjected to a heavy burthen in maintaining an increased fleet in Indian waters to protect Indian interests. It is probable that if a war were to break out between Great Britain and a leading European Power, the Suez Canal would be closed. Should that happen, the three garrisons on the Suez route would not protect trade, which the necessities of the case had diverted into another route.

Q. 14,995.

Q. 12,513–5. Q. 15,765. Q. 16,103. Q. 16,399.

239. Great Britain at present takes her own share of charge when she maintains two out of the three garrisons in the Mediterranean and the Red Sea,* although Malta and Gibraltar are of importance in connexion with the Mediterranean independently of their being stations on the road to India; but it is admitted that the Eastern Colonies have a considerable interest in the trade which passes by Aden, and Great Britain might in our opinion fairly recognise, as far as India is concerned, the existence of that interest, by relieving India of a part of the cost of maintaining Aden.

14,995.

240. As we have pointed out, the military charge of the garrison is estimated at Rx. 216,000. The net civil charge is estimated at Rx. 29,000. On this last point Mr. Jacob said that Aden is practically an Indian town; the labouring population, the traders, and the capitalists are Indian; and the administration has hitherto been on the Indian system.

If the Empire were organised as a whole, Aden would be an Imperial charge, towards which the members of the Empire would contribute, but in the absence of such an organization, another arrangement must be made, and the equity of the case would, perhaps, be met if the United Kingdom were to contribute one-half of the military charges. If that concession were made, Great Britain should be consulted before changes are made increasing the amount of those charges.

Appendix, No. 48, Vol. II., p. 371.

Appendix, No. 48, Vol. II., p. 372.

241. A reference has been made to the charge of the Somali district on the African Coast of the Red Sea. A memorandum of the Indian Government states that the district was occupied as a necessary and principal source of food for the garrison and settlement of Aden, which is girt about by sea or sandy waste. No important financial issue is involved, as the revenue of Somaliland practically meets the expenditure. The administration of that part of the coast has, moreover, now been taken over by the Imperial Government, and India, therefore, has no longer any financial interest in the matter.

(c.) *The Persian Mission.*

Qq. 12,398 *et seq.* Appendices, Vol. II., Nos. 48, p. 370, 49, p. 372, and 65, p. 403.

242. The Persian Mission was established in 1810, and was maintained at the charge of Great Britain until 1823, when it was transferred to India. From 1823 to 1831 it was wholly supported from Indian funds. In 1835 it was re-transferred to the British Foreign Office, the Indian Government contributing 12,000*l.* a year towards its cost.

* In 1894–5 3,255 merchant vessels passed through the Canal. Of these 1,309 called at Aden, 486 at Perim, and 667 at neither stations. Sir E. Collen states that the value of the trade between the United Kingdom and India in 1894 was 68,000,000*l.*, and between the United Kingdom and Australia 53,000,000*l.* The whole of the latter, however, would not pass through the Canal.

In 1859 another change was made, and the Mission and the Consulates at Tehran, Tabriz, and Resht, were placed under the Government of India. The cost of the Mission was then estimated at 15,000*l.* a year, towards which Great Britain paid 3,000*l.* and 2,000*l.* on account of the Consulates. In 1860 the Mission and the Consulates were re-transferred to the British Foreign Office, and from 1860–1 to 1879–80 India contributed 12,000*l.* towards the Mission, leaving the Consulates at the sole charge of Great Britain. In 1880, on the recommendation of the Select Committee which inquired, in 1871, into Diplomatic and Consular Establishments, the Indian contribution to the Mission was reduced to 10,000*l.*, and that rate was paid till 1890–1. In 1891 it was decided at the Foreign Office Conference, which, under the presidency of Lord Salisbury, examined various questions at issue between the two Governments, to reduce the contribution to 7,000*l.* The Treasury consider that contribution too small, and the Indian Government consider it too great. The Treasury has made a calculation of the charges incurred by India and Great Britain respectively for the Mission and the Consulates in Persia, including the telegraphic establishments, but exclusive of the subsidies to steam service on the Tigris and Karun. They estimate the Indian charge in 1891 at 24,600*l.* and the British charge at 16,400*l.* Sir H. Waterfield states the average expenditure of India on the Persian Mission and Consulates during the three years 1893–4, 1894–5, 1895–6, at 30,522*l.*; of Great Britain at 21,824*l.* The two Governments are not agreed as to the extent of their respective interests in Persia. It is, in our opinion, desirable to adopt a general principle of division which will put an end to these discussions. Both countries have admittedly a large interest in Persia, and we think that the charges of the Mission and Consulates should be evenly divided between the two countries. We think, also, that the British Foreign Office should not create or add to the establishments and services under its control without the consent of the Government of India, and *vice versâ*, that the Government of India should not add to the establishments and services under their control without the consent of the Foreign Office. Lastly, the charge as made up for division should be complete, including outfits, pensions, and all contingencies, to which the Government of India sometimes demurs.

Q. 14,986.

(*d.*) *The China Consular Establishments.*

243. The East India Company bore the whole expense of diplomatic and consular intercourse with China as long as it enjoyed a monopoly of British trade with China. In 1834 that monopoly ceased, and it was decided that Great Britain should thenceforth pay two-thirds and India one-third of the cost of the superintendents of trade, who were to represent diplomatic and consular interests in China. India paid in consequence one-third of the charge from 1834 to 1875 subject to some deductions. The opening up of China and increase of trade led to an increase of the diplomatic and consular establishments, and, apparently, one-third of the divisible charges would now amount to about 20,000*l.* a year. In 1876 the arrangement was revised, and from that year to 1889 India paid a fixed contribution of 15,000*l.* a year. The Indian Government, however, considered this contribution excessive, and they desired to reduce it to 10,000*l.* The Treasury maintained, on the other hand, that 15,000*l.* was a fair contribution. The question was referred to the "Foreign Office Conference" in 1891, and the Conference split the difference reducing the contribution to 12,500*l.*, a rate which was to continue in force until 1899–1900.

Qq. 12,415 *et seq.* Appendices, Vol. II., No. 48, p. 370, and No. 49, p. 373.

Thus the interest of India in the China trade has always been officially acknowledged, and it must be borne in mind that India depends for a considerable proportion of her revenue on the opium trade with China. She has so far a special concern in efficient representation at the ports in China where opium is imported. It is impossible to apportion such interests between Great Britain and India with mathematical accuracy. We think that the decision of the Foreign Office Conference should be maintained, that the contribution should be fixed for a certain period, say, ten years. If the conditions of trade should in the meantime change, and if there should arise in consequence a difference of opinion between the two Governments, the point when the date of revision arrives, should be submitted to the arbitration which we suggest in another section of our report. The present arrangement might be allowed to remain in force for a period of five or six years.

(*e.*) *The Zanzibar and Mauritius Cable.*

244. In 1890 the Government of India desired to obtain an alternative telegraphic route to England in time of war. They proposed that for that purpose India

Qq. 12,392 *et seq.*

Appendices Vol. II., Nos. 48, p. 370, 49, p. 375, and 64, p. 402.

should be placed in telegraphic communication with the Cape, and with England by a new cable from Ceylon viâ Mauritius to the Cape. The proposal was referred to a committee at home of two members from the India Office, two members from the Colonial Office, and one member from the Admiralty, Foreign Office, and War Office respectively.

This committee altered the proposal. They thought that telegraphic communication with Mauritius would, in the event of war, be of the utmost importance both to Great Britain and India, for, if the commerce of India were diverted from the Suez Canal to the Cape route, the Mauritius would be the base from which English cruisers would operate for the protection of that commerce. In any case it would be an outpost of great importance to India. The Government of India accepted the conclusion of the committee as to the vital importance to the eastern carrying trade of establishing communication between the Mauritius and India, and they advised that India should bear a moderate share of the necessary subsidy. The British Government agreed to subsidise a cable to Mauritius viâ the Seychelles, on the understanding that the balance of the subsidy (probably 24,000*l.*) after abating the contribution to be made by the Mauritius, would be equally divided between the two Governments. The India Office referred this proposal to the Government of India, and asked their opinion upon it. The Government of India replied that they considered that the Indian contribution should be substantially less than that contributed by the Imperial Government. The Secretary of State rejoined, that the Treasury declined to pay more than half the subsidy (after deduction of the Mauritius contribution, estimated at 8,000*l.*), and he proposed to undertake the other half, adding that Her Majesty's Government already paid 55,000*l.* to the East Africa line.

Appendix, No. 64, Vol. II., p. 402.

The Government of India accepted the proposal, feeling that it was the only means by which telegraphic communication between India and Mauritius could be secured.

Sir David Barbour dissented from the conclusion of the Government of India, because, in his opinion, the duty of protecting commerce on the high seas should devolve upon England.

The memorandum of the India Office shows that the Indian Government thought the communication of so much importance to India, that they consented to pay a moiety of the subsidy, after deducting the contribution of the Mauritius, rather than lose the line.

Sir Henry Waterfield does not object to a contribution. He had expected that the Indian Government would pay 8,000*l.* They do pay 10,000*l.*, and he pleads for the smaller sum.

It appears to us that this was a contract between willing parties. The Government of India undertook a certain liability with their eyes open, and we see no reason now for modifying the arrangement.

(*f.*) *Red Sea Telegraph.*

Qq. 12,314, *et seq.* Appendices, Vol. II., Nos. 48, p. 370, and 49, p. 345.

245. No question arises on the Red Sea telegraph, in respect of which an annuity of 36,000*l.* is payable till 1908. India contributes half, or 18,000*l.* (with expenses added, 18,027*l.*). The annuity represents the charge of the first cable in the Red Sea laid down under the auspices of the two Governments in 1858, and soon found worthless.

(*g.*) *Euphrates, Tigris, and Karun Subsidies.*

Qq. 12,479, *et seq.* Appendices, Vol. II., Nos. 48, p. 371, and 49, p. 375.

246. Since 1863 the Government of India have paid a subsidy for the carriage of mails between Bussorah and Baghdad. The subsidy is Rs. 24,000 for a weekly service. The Indian Post Office does not require a weekly service, but the Government of India are willing, Sir H. Waterfield says, to pay the subsidy in consideration of the large Indian native community resident at Baghdad. The British Post Office does not think a subsidy necessary.

In 1888 the Persian Government opened the River Karun up to Ahwaz. Messrs. Lynch placed steamboats on the river, and in 1890 they obtained a subsidy from the British Government amounting to 2,000*l.* a year, to which it was agreed that India should contribute a moiety; but the Government of India consider that India has not the same interest in the navigation of the Karun as she has in that of the Tigris.

It is extremely difficult to appraise the respective interests of Great Britain and India in these subsidised services. It is admitted that each has an interest, political as well as commercial, in those regions, and probably the equity of the case would be met by dividing them. If India maintains the Bussorah Baghdad service, Great Britain might maintain the Karun service.

(*h.*) *Peninsular and Oriental Company's Mail Subsidy.*

247. The contribution of India towards this subsidy was regulated under an agreement called the Halifax award. The Government of India, however, were not satisfied with that award, and the question was referred last year to the arbitration of the Earl of Morley, who has given his award. We do not, therefore, consider that our opinion upon it is required. Qq. 12,269–98, 12,327–93. Appendices, Vol. II., Nos. 48, p. 370, and 49, p. 375.

(*i.*) *The Jeddah Consulate.*

248. The Indian Government agreed, in consideration of the number of Indian pilgrims passing through Jeddah to Mecca, to pay half the charge of the Consulate at Jeddah. The contribution varies from about 400*l.* to 700*l.* a year, and no question arises upon it. We may observe that India does not actually pay half the charge, as she declines to include in the account various consular charges, such as travelling, leave, and outfit allowances. Appendices, Vol. II., Nos. 58, p. 371, and 49, p. 373.

(*j.*) *The Chiengmai Consulate.*

249. The consulate was created in 1883 for the protection of British Indians in Northern Siam. It used to be wholly maintained from Indian funds. It was transferred, in 1891, for convenience sake, to the British Consular estimates, on condition that India should bear the cost. It appears, however, that in actual fact she does not bear the whole cost. No question is raised by India upon this charge. Q. 12,475, Appendix No. 49, Vol. II., p. 374.

(*k.*) *Réunion Consulate. Surinam Consulate.*

250. India contributes small sums to the above consulates, on account of assistance rendered to Indian emigrants. The Indian Government raise no question upon these charges. Qq. 12,493–6.

(*l.*) *Voluntary Contributions.*

251. It is, of course, unnecessary to express an opinion on a few voluntary contributions which India makes to the Imperial Institute, and for other purposes. Qq. 12,497–506.

(2.)—Army Charges.

252. The foregoing subjects fall directly within the scope of the language of our reference, "The apportionment of charge . . . . . for purposes in which both (the United Kingdom and India) are interested." But the matter of apportionment which has been most debated between the two Governments, and in respect of which we took the greatest amount of evidence, turned upon the principles on which the amount to be paid by India to the United Kingdom for military aid rendered by the latter for the service of India should be calculated. We understand this to be the chief question which we have to consider. This is not quite the apportionment of a charge for a service in which both are interested; it is rather the question of what should be paid by India as the cost of a service wholly in its interest.

253. The claims of the War Office against India on account of army effective service are based upon the principle that India is to repay to the British Exchequer the actual cost incurred by the War Office at home in raising and maintaining the British force in India. The actual cost, as defined by Sir R. Knox, consists of every charge which would not be incurred, if it were not necessary to send reliefs to India. Appendix, No. 45, Vol. II., p. 261, Q. 12,520.

In 1896–7 the claim of the War Office against India on account of effective services at home was calculated, not on the cost of the home service as Sir R. Knox defines it, but on the basis of the compromise recommended by the Committee to which we shall hereafter allude, and of which Lord Northbrook was chairman. It was:—

	£
Capitation, including deferred pay	*745,700

* The charge for the year was 745,700*l.*, but an overpayment for the previous year was deducted—21,806*l.*

(a.) Capitation Charge.

254. The greater part of the claim refers to services the cost of which is covered by the "Capitation Rate." These services are (1) the enlisting and temporary training of the recruit for the arm of the force to which he will belong. They include the cost of officers and non-commissioned officers who train the recruit, and a charge for those recruits who desert or die in the first year of service, that is, a charge for waste in the production of the soldiers required to keep up the established strength of the British force in India; (2) the pay of young officers appointed to vacancies in the force and waiting orders to sail, and of young officers appointed to the Royal Engineers stationed in India, who undergo a training of two or three years at Chatham; (3) the training of veterinary surgeons for India; (4) the examination of candidates for the Indian Medical Service; (5) Educational establishments, viz., the Royal Military College, the Royal Military Academy, the Staff College, the Army Medical School, the School of Gunnery, the School of Engineering, and the Artillery College; (6) advances of 25 days' pay to drafts sailing for India; (7) expenses of men sent home from India either as invalids or time-expired men and awaiting their discharge. This charge includes pay of the men while on their passage home. (8.) Expenses of Indian invalids at Netley and at Woolwich Hospitals, and of a general depôt established at Gosport for the discharge of men, instead of sending the men for discharge to their several depôts throughout the country.

Appendix No. 50, Vol. II., pp. 376–7.

255. Since 1890–1 these charges have been met by a capitation rate of 7*l.* 10*s.* for each man borne on the establishment of the British force in India. Previously the War Office made a detailed claim in respect of each service, and, in 1889–90, the last year of the former arrangement, the accepted claim on their account amounted to the following sums:—

	£
1. Charge per head on troops embarked for India (12,122)	306,049
2. Charge of depôt staff for training recruits	220,715
3. Agency (now abolished)	3,020
4. Charge for deserters, deaths or discharges under one year's service	8,650
5. Maintenance of young officers before embarkation	4,769
6. Maintenance of young Engineer officers under instruction	5,462
7. Training of veterinary surgeons for India (six months)	600
8. Examination of candidates for Indian Medical Service	481
9. Educational establishments	37,065
10. Advance of 25 days' pay to men embarked for India	11,563
11. Expenses of men awaiting discharge	33,259
12. Share of cost of staff of hospitals and of the discharge depôt	45,441
	£677,074

Q. 12,668.

256. But against this charge must be se tan allowance to the Indian Government for "Rebate." "Rebate" was based upon the assumption that an infantry soldier* receives in England a training of six months, for which the Indian Government pays. When, therefore, a soldier returned to England after service in India, and served for four years in the reserve, India claimed a rebate on the enlistment and training charge which she had paid for that man, because a part of his service would be given at home. Again, if the War Office, under stress of circumstances, sent out a man with less than six months' training, India claimed a rebate in respect of him; but on the other hand, if the War Office† sent out a man with more than six months' training, India claimed a rebate because he had added during such excess time to the force effective for defence at home.

* The period of training varies for soldiers of other branches.

† It will be seen hereafter that India paid nothing for the training of an infantry recruit in excess of the six months.

257. In 1889–90 the allowances to India for rebate amounted to the following sums:— Capitation Charge.

	£
a. Men embarked with service short of the training period	1,937
b. Men embarked with service above the training period	47,322
c. Men transferred from cavalry and artillery depôts to home regiments	15,315
d. Men returned for further service with the colours in the Reserve, including recovered invalids	91,491
Total rebate	£156,065

which sum deducted from the total charge (£677,074) leaves a net charge in 1889–90 against India for services covered in the future by the capitation rate of	521,009
To this sum may be added the charge of deferred pay	213,192
Total net charge	£734,201

The corresponding charge under the capitation rate, with the addition of deferred pay, amounted in—

	£
1893–4 to	746,731
1894–5 „	778,250
1895–6 „	740,000
1896–7 „	745,700
1897–8 „	729,000

The capitation rate is a net charge, and there is therefore no longer a deduction for rebate.

It will be observed that the capitation rate corresponds more or less closely with the actual charge in the last year of the old arrangement.

258. It may be interesting here to state, shortly, the changes which have taken place in the method of assessing the claim of the War Office on India.

From 1824 to 1860 the actual expenditure incurred at home in defraying the effective charges of the Royal troops serving in India was ascertained and recovered from India. Inconvenience and delay attended this method of adjustment, and when the permanent British force in India was greatly increased after the Mutiny, it became necessary to reconsider the subject. A Committee, under Sir A. Tulloch, was appointed for that purpose in 1861. It recommended, after much consideration, that payment should be made for home charges in the form of a capitation rate of 10*l.* on every soldier on the British establishment in India, the term soldier including officers of all ranks. This capitation rate was actually paid for the years 1861 to 1869 inclusive and the average yearly sum repaid by India during that period was 631,244*l.*

In 1870, India disputed the fairness of the 10*l.* rate, and, pending revision of the arrangement, declined to pay more than certain sums "on account." From 1870 to 1878 these payments on account averaged only 440,000*l.* a year, and a Treasury Minute of 2nd July 1878, confirmed by an Act of Parliament, accepted them for the years mentioned in full discharge of India's liabilities, excepting claims for certain stores and minor services. This decision involved a remission of War Office claims to the extent of about 400,000*l.*

The same Minute proposed that a Committee should be appointed jointly by the India Office, the War Office, and the Treasury, to fix the capitation rate to be paid in the future. It was intended that the rate so fixed should be in force for a certain number of years, and should then be subjected to revision. Mr. Bouverie was in the first instance appointed Chairman of the Committee. At a later stage the Committee was reconstituted and Lord Northbrook took the chair. A Royal Commission was at that time considering the subject of military organisation, and an Indian Commission was inquiring into the military charges of India. Lord Northbrook, therefore, recommended that, pending the reports of these Commissions, payments by India should be "on account." In pursuance of this recommendation, the Committee submitted

Capitation charge.

specific sums for payment by India. These sums, including deferred pay, which in those years represented a comparatively small sum, averaged for the six years to 1884–5 520,517*l.* Subsequently the Committee recommended a payment of 750,330*l.* for 1885–6, and of 627,537*l.* for 1886–7, and on the 22nd March 1892, they made their last report. They fixed the payment, including deferred pay, for 1887–8 at 665,986*l.*, for 1888–9 at 719,948*l.*, and for 1889–90 at 734,201*l.*, and they recommended that a capitation rate, based on the number of men borne on the establishment of the British force in India, of 7*l.* 10*s.* per man should be accepted for the years 1890–1 and 1891–2; that rate, however, was not to include deferred pay. The recommendations of the Committee were accepted by the Treasury, the War Office, and the India Office, and since then the capitation rate of 7*l.* 10*s.* per man has been renewed for the years intervening from 1892–3 to the present time.

259. The Indian Government think that rate too high. On the other hand, the War Office contends that under it India does not repay to the Imperial Government the actual cost incurred by the War Office at home in raising and maintaining the British force at India. We are asked to express an opinion upon the point which is thus at issue between the two Governments. In order to form such an opinion we must examine closely the charges covered by the "capitation rate." They are divisible into two heads:—(1.) The cost of enlisting and training the recruit included under the general term of Depôt Charges. (2.) Other charges.

(1.) *Cost of Enlisting and Training the Recruit (Depôt Charges).*

260. Depôt charges cover expenditure incurred in enlisting and training the recruits required yearly to keep up to its established strength the British force in India. Under the present capitation rate the War Office does not make out in detail its claims for this and other services covered by the rate, and we must, therefore, recur for information upon that point to the last statement rendered under the previous arrangement, that for 1889–90, which is given in a preceding paragraph. Four items in that statement refer to the recruit:—

	£
1. Charge per head on troops embarked - - -	306,049
2. Depôt training staff - - - - -	220,715
3. Charges for deserters, deaths, &c. - - -	8,650
4. Advance of pay to men embarked - - -	11,563
making a charge of - - - - - -	546,977

out of a total claim of 677,074*l.*

But from this sum of 546,977*l.* must be deducted the rebate of 156,065*l.*, leaving a net claim on India for recruits of 390,912*l.*, or not quite 32*l.* 5*s.* per man on 12,122 recruits. The capitation rate of 7*l.* 10*s.* on a force of 73,000 men would amount to nearly 548,000*l.*, say 550,000*l.* If the charges not connected with recruits equal now on an average the sum allowed for them in 1889–90, say 130,000*l.*, the balance, 420,000*l.*, represents the sum which India pays for her recruits, or about 35*l.* for each recruit.

261. This is the charge to which the Indian Government object as excessive. They object (1) because in their opinion the cost of raising and training the recruit is too great; (2) because the War Office in raising its charge against India for recruiting does not make sufficient allowance for the value to England of the recruit when training, or of the returned soldier, inasmuch as the recruit and the soldier in the reserve contribute to the defensive force in the United Kingdom. In the discussion between the Indian Government and the War Office, depôt charges are usually measured by their relation to the established strength of the force which depôts are instituted to maintain. Thus, if the effective force in India were 12,000 men and the charge of the depôts were 60,000*l.*, the cost would be stated as 5*l.* for each effective man of the force. The East India Company in days before the Mutiny maintained in India a local European force of about 12,000 men, and they kept a depôt at Warley to provide the recruits necessary to maintain that force. The cost of the Warley depôt, measured in this fashion, was very low. The Indian Government computed it at

2*l.* 8*s.* 11*d.* per man of their established European force, and they compare it with the charge for recruits made at different times by the War Office. Thus, before the Mutiny, the recruits required for the establishment of the Royal army in India (about 24,000), calculated, apparently, on the same principle, were said to cost 8*l.* per head of the established force. After the Mutiny, and on the advice of the Tulloch Committee, the capitation rate was fixed for a time at 10*l.* It now is 7*l.* 10*s.* These calculations, however, though apparently similar in kind, cannot be made the basis of a true comparison, because they do not include the same services; and even if the differences which invalidate comparison were removed, the principle of the comparison is in itself imperfect, for it does not compare at the different periods the cost of the article produced, viz., the soldier. We therefore put this method of comparison aside, and we compare simply the cost of producing the recruit before the Mutiny with the same cost in recent years. We should expect to find that the cost of producing a recruit at Warley was much lower than it is now: (1) because a recruit was then a less expensive article than he is now; (2) because the recruit practically received little or no training at Warley; (3) because the Company enlisted men for life. These men might practically return with a pension after a service of 21 years. At present the Crown enlists men for eight years at most. A larger supply of recruits is therefore required yearly in order to maintain the established force in India. Capitation charge. Depôt charges.

In the following figures we endeavour to make a comparison between the cost of the recruit (i.) at Warley, under enlistment for life, (ii.) under the system of enlistment for ten years which prevailed between the Mutiny and the year 1871, and (iii.) under the system of Short Service established in 1871.

(i.) *Warley.*

262. We take the years 1850, 1851, and 1852, because later years were disturbed by the Crimean War. Some of the Queen's troops were then temporarily withdrawn, and the local European force was increased. The average strength of the local European force (non-commissioned officers and men) was during those three years 12,618.

One thousand recruits annually (in round numbers) were required to maintain this force. The European force in India is now about six times the number of the old local European force. If, for purposes of comparison, we assume that the principle of enlistment for life could be applied to the Queen's forces at the present time, it would require in round numbers 6,000 recruits to maintain a force of 72,000 European soldiers in India. At the present time 12,000 recruits (in round numbers) are sent out annually. For the purposes of our comparison, therefore, it may be said that the number of recruits required under the present system of short service is double what would have been required under a system of enlistment for life. The Indian Government calculated the charge at Warley, in the years 1850–7, to have been 26*l.* 7*s.* 5*d.* per man. But Warley provided only infantry and artillery recruits. No cavalry recruits were sent out from there, and cavalry recruits are more expensive than infantry recruits. The average charge, therefore, would have been perceptibly higher, if a proportion of the Warley recruits had been cavalry. The War Office, moreover, points out that the Warley charge did not cover some services included in the present capitation rate. It is probable, therefore, that the Warley charge, adjusted for comparison with the present charge, would have approached 30*l.* for the recruit. But the Warley recruit had little or no training, and the Indian Government now require at least six months' training for each infantry recruit and nine months' for each cavalry recruit. As matter of fact, the majority of the recruits receive considerably more than those periods, but India is not charged for such excess. If, then, we take the Warley charge at 30*l.* per raw recruit, it is a moderate figure, and at that rate the cost of recruiting 6,000 men would have been 180,000*l.*

(ii.) *The Ten Year System.*

263. In the Queen's Army from 1847 to 1870 recruits were enlisted for ten years. The War Office reckons that short service added 50 per cent. to the cost of recruits sent out under the ten-year system. If that be so, where 12,000 recruits are now required 8,000 would be required under the ten-year system, and if the cost of each recruit was the same as at Warley, it would entail a charge of 240,000*l.*

(iii.) *The Present System.*

Capitation charge.

264. The force of 12,000 recruits now required would have involved a charge of 360,000*l.* at the Warley rate of 30*l.* for each recruit.

Depôt charges.

We have calculated in a previous paragraph *the charge on India* for recruiting under the present capitation rate of 7*l.* 10*s.* at 420,000*l.*, or 35*l.** per recruit, that is to say, 240,000*l.* in excess of the Warley rate.

265. We make this comparison between the premutiny system and the present system because the Indian Government have compared the present charge with the Warley charge. But Warley does not supply a possible basis of comparison. No one supposes that the present European force in India could be maintained by a system of life enlistment, and for the rates of charge which ruled 50 years ago. A more possible basis of comparison is afforded by the 10-year system. On that comparison the present charge to India for a recruit shows an excess. It is difficult to say what that excess would be. If the recruit under the 10-year system could have been provided at the Warley rate, the excess would be, as we have shown, 180,000*l.*, but we know that under the 10-year system the recruits required could not have been raised at the Warley rate. The excess, therefore, of the present charge to India for the recruit over the cost of the recruit under the 10-year system would be less than 180,000*l.*†

Our figures are only approximate. It may be that a return of the actual charges covered by the capitation rate, which are not given for a later year than 1889–90, would at the present time show some change of distribution, that is to say, the proportion due to recruiting charges might be somewhat higher, that of the other charges somewhat less. Such variation, however, would not materially affect the result. We are inquiring whether it is true that recent changes in army organisation have increased the burthen upon India, and for that purpose we are content to take for the present charges a figure calculated upon the above basis, but at a full amount. We consider that we do so if we say that recruiting for India costs, under the present system, and, according to the figures given above, 150,000*l.* a year at home more than it did under the 10-year system. We should be making a very liberal estimate if we raised it to 200,000*l.*, in order to guard against possible modifications in the proportions between recruiting and other charges, or other contingencies.

Short service and deferred pay.

266. In forming an opinion upon the fairness of the "capitation rate" we must take into consideration the great changes which have taken place in the organisation of the army within the last 30 years. The Indian Government think that these changes have increased the burthen on the Indian taxpayer, and it is of the essence of the question to ascertain whether that is the case or not. The first and the most important change was the introduction of short service. The second was the grant of deferred pay, which is now merged in the ordinary pay of the soldier. The Indian Government appear to doubt (1) whether short service and deferred pay do not impose an increased burthen on Indian finances, and (2) whether the present system gives India efficient European soldiers.

Their views upon these two points are not precisely stated, and we have some difficulty in ascertaining the extent of their objections, and the remedies which they would propose.

Before the introduction of short service, the soldier enlisted for 10 years, and could continue to serve until he could earn a pension.

Under short service he enlists for seven years, with a liability to serve an extra year abroad, and he does not earn a pension.

267. We compare the working of the two systems; and upon the first point we have to ascertain whether the conditions attending or following the introduction of short service are financially more onerous to India than the conditions of the longer service which was previously required. As we have stated, the Indian Government appear to think that that is the case; but in the evidence before us they do not examine this financial problem as a whole. They say truly that short service increases expenditure in raising and training men, that the transport of a larger number

* The War Office contend that this is not the actual cost of the recruit at the present time.

† At 35*l.* per recruit, the 6,000 recruits required under the system of recruiting for life would cost 210,000*l.*; the 8,000 recruits required under the 10-year system, 280,000*l.*

of soldiers to and from India, as also the grant of deferred pay, impose an increased burthen on Indian finance, but they practically leave out of consideration the saving of pensions which accompanies short service. On the other hand, the War Office contends that the short service system is on the whole less expensive to India than the system which it superseded, and they support their contention by figures which have not as yet been controverted. The War Office agrees with the Government of India that India bears a new charge in the shape of deferred pay, and a heavier charge on account of transport than she would pay if the soldier enlisted for a longer term of service. Deferred pay is calculated on an average at 210,000*l.* a year, and the increase on transport at 73,000*l.* As a matter of fact, the actual cost of transport is less now than it was under the old system, but this economy is due to the reduction which has taken place in freights, and the War Office states the case quite fairly when it calculates the charge at that which would be incurred now, supposing that the old rates of charge were still in force. Under the ten-year system 18,000 persons were transported yearly between England and India. The War Office adds one-sixth on account of the increase of the European force which has taken place in the interval. In 1894–5 the force transported at the cost of India was 29,000, and the increase of charge is gauged by the difference between the two numbers.

Short service and deferred pay. Appendix, No. 51., Vol. II., pp. 378–83.

268. The War Office thus arrives at an increase of about 283,000*l.* a year, due to deferred pay and increase of charge for transport. It admits also an increase of charge under the head of recruiting expenses, which we have estimated approximately in a preceding paragraph at 150,000*l.* to 200,000*l.* a year. On the other hand, the War Office gives us a calculation, made by its actuaries, of the effect of the short service system on the pension list. The actuaries estimated that the system superseded by short service was working up to a normal pension charge of 971,000*l.*, in respect of the Indian service of the Queen's army, and that the short service system would work up to a normal charge of 328,000*l.*, giving an eventual reduction on the pension list of 643,000*l.* If there had been no increase of the force in India, the maximum pension charge of 835,000*l.* would have been reached upon a force of 60,000 men about 1902. The addition of 10,000 men in 1885 would have increased that maximum about the year 1920 to 971,000*l.* The War Office further states that the actual experience which it has gained supports the estimate of the actuaries. In five years from 1876 the average number of soldiers with Indian service retiring yearly on pension was 4,600. In 1893 and 1894 the average was 900.

If these figures are approximately correct, the financial changes consequent on or subsequent to the introduction of short service will, when the present system is in full operation, result, not in an increase of expenditure in India, but in an actual economy to India of between 160,000*l.* and 200,000*l.*

The following figures compare the actual increase of expenditure on one hand, and the prospective saving of expenditure on the other hand, under the present system of service, as compared with the system which it superseded:—

Increase of Expenditure.			Saving of Expenditure.	
		£		£
Increase of pay, formerly deferred pay		210,000	Eventual saving on pension list	643,000
Increased charge of transport		73,000		
Increased charge of recruiting, over that of the ten-year system, say	150,000 or	200,000		
	433,000 or	483,000	Total	643,000

It is calculated that the full saving of 643,000*l.* will be substantially reached about the year 1920, entirely in 1955. On the other hand, the increase of expenditure caused by short service and deferred pay* has been an actual charge on the Indian

* Short service was introduced in 1870, and deferred pay in 1876.

revenue for many years past, and up to the present date there has been no substantial decrease in pensions if we include the payments of pensions still made by the War Office on account of the payments of their capitalised value made yearly by India to the War Office between 1861 and 1884.

Conclusions.

Capitation charge. Conclusions.

269. We have to say (1) whether, in our opinion, the capitation rate is too high; (2) whether the conditions attending or following the introduction of short service have increased the public expenditure.

We treat the subject at this point as one of business, not of sentiment, assuming that India, employing about one-third of the British army, pays her fair proportion of the cost of that army.

270. (1.) We have calculated that the capitation rate of 7*l.* 10*s.* upon the present British force in India would amount to about 550,000*l.* 420,000*l.*, part of this sum, would represent services connected with recruiting. A sum of 420,000*l.* paid for 12,000 recruits, is equivalent to 35*l.* for each recruit (all branches of the service being included), and we compare it with the charge approaching 30*l.* for each European recruit, which India paid before the Mutiny. A recruit is a more expensive article than he was 40, or 50 years ago. Moreover, the recruit of the company received little training before he embarked, while the recruit of to-day undergoes a training of eighteen months to two years before he sails. These facts prepare us for the contention of the War Office that 420,000*l.*,* or 35*l.* for a recruit, does not cover the cost of a recruit to the War Office. The War Office, however, under the capitation rate does not charge India more than 35*l.* for each recruit, and any balance of cost is levied on the British taxpayer. India does not pay under this head the whole cost of training the Queen's soldiers whom she employs, and it cannot be said that the cost of the recruit to her is excessive. On the contrary, she would pay more than 35*l.* for each recruit† were she to maintain a separate army and separate recruiting establishments.

The Government of India think that the War Office in raising its recruiting charge against India does not make sufficient allowance for the value to England of the recruit when training, or of the returned soldier, but they forget that the War Office only claims from them the cost of training the recruit for six months, while it actually trains him for 18 months and more. The recruit is not of much value during the beginning of his training, and the Indian Government can hardly ask the War Office to do more than they do now, namely, pay the whole cost of the recruit after he has received a training of six months until he embarks. As regard the reserve, we notice in the account of 1889-90, upon which the capitation rate was founded, a rebate of 91,000*l.* was allowed on soldiers returning from India for further service with the colours or in the reserve. If further allowance were thought necessary, we may point out that the reserve costs Great Britain 500,000*l.* a year, and that Great Britain asks no contribution from India towards it, although it is admitted that, in case of emergency, India may draw upon the reserve.

On the question whether the short service system has increased the public expenditure of India, we have shown that it has done so temporarily, but that ultimately the saving on pensions will more than counterbalance the increased cost of recruiting and transport, and the additional charge involved in the grant of deferred pay, provided always that the reduction of the pension charge is maintained, as these calculations assume.

We do not therefore think it necessary to revise the capitation rate. It has been in force since 1890–1, and it might, in our opinion, continue in force for the period of five or six years. But at the end of that time a general revision should take place.

We deal later with the services covered by the capitation rate but unconnected with recruiting.

271. (2.) It is a difficult matter for laymen to offer an opinion upon the question, whether short service gives India an efficient European force. Sir E. Collen does not

* The expenditure on services covered by the capitation rate, but unconnected with recruiting, may vary from year to year from the sum of 130,000*l.*, which represented their cost in 1889-90, and the balance applicable to recruiting services would vary in the same degree, but the variation would, probably, not greatly alter the figure of 35*l.*

† We do not forget that if India maintained a separate army she would possibly enlist her recruits for longer service, and would therefore require fewer recruits each year. But if she reverted to the old ten-year system, she would incur a heavier charge for pensions.

favour short service. His evidence is, in effect, an argument against it. He thinks the youth of the soldiers sent out under the short service system a disadvantage, since, in his opinion, young men suffer more by the climate than older men; and from the evidence of officers which he quotes, we gather that men above 25 years of age are, in his opinion, the best soldiers for India. He states that the average service of the European soldier in India is five years and four months. We understand that he would prefer a service of 10 years in India, but that the Government of India would be probably satisfied with a service there of seven years. Deferred pay, he thinks, may prevent men from re-engaging, who otherwise would do so even without prospect of pension. Sir H. Waterfield thinks that the reserve which short service creates would not be of use to India, unless she could, in time of need, command aid from that reserve; but he holds, if we understand him rightly, that India should in that case pay only the increased cost of transporting reserve men to India, and should not be charged with capitation rate upon them, should the draft from the reserve increase the number of the effective force in India. These objections may be thus summarised. Witnesses of the Indian Government (1) prefer the system of 10 years' service, which was superseded by short service; (2) they think that the soldier sent out is too young, that he is more subject to illness, and not so efficient as an older man; (3) they question whether deferred pay may not prevent men from re-engaging; and (4) they doubt the practical value of the reserve to India.

Capitation charge.

Effect of short service.

272. The War Office replies upon the first point that short service was established because the Government could not obtain recruits to enlist on long service, and that short service would not have been introduced so early, had it not been for the increased demands for recruits due to the increase of the Army and the creation of the reserve.

Qq.13,136-9.

The War Office replies upon the second point that it is the arrangement with the Indian Government not to send the soldier to India till he is 20 years old, and Lord Wolseley is "tolerably certain" that in former times the standard age was not as high as 20 for the Queen's Army. The facts do not decisively establish the contention that young soldiers are more liable to illness. For instance, in 1871 the death rate in the Indian Army was 17·53 per thousand, and the invaliding 43·62. In 1894 the death rate was 16·07, the invaliding 25·45 per thousand. Sir E. Collen, since he gave evidence before us, has furnished us with a return of invalids for ten years from 1886 to 1895 inclusive, which shows that men of from 20 to 24 years of age constituted 48 per cent. of the strength of the European Army, and that 52 per cent. of the invalids came from men between those ages; 33 per cent. of the invalids came from men between the ages of 25 and 29, who constituted 35 per cent. of the force. The figures, therefore, tend to show that men between 25 and 29 are the healthiest, but the difference is not so great as to justify positive conclusions against the health of the younger men. Sanitary measures and temperance have probably diminished the death and invalid rates. On the other hand, the ratio of "constantly sick" fell from 71 per thousand in 1860 to 55 per thousand in 1877, the year in which short service began to affect the British troops in India; and the ratio rose from 55 in 1877 to 93 in 1895. Sir Ralph Knox points out that the first year of service in India is trying to European constitutions, and that the larger number of recruits now sent out means a larger amount of invaliding comparatively at the commencement of service. Lord Wolseley does not accept the view quoted by Sir E. Collen from Sir Henry Norman, and other military authorities, that the older soldiers make the most efficient fighting men.

Q. 13,082.

Upon the third point, both Lord Wolseley and Sir R. Knox hold that pensions must be given if service were much extended.

Upon the fourth point, Sir R. Knox contends that the reserve is a reserve for both countries, and, if India requires additional battalions to meet an emergency, the reserve must be used, as it would be if emergency arose in England.

Qq.12,760-1.

273. As far as we are in a position to offer an opinion upon the evidence which has been placed before us, we have some doubt upon the first point whether the representatives of the Indian Government sufficiently appreciate the difficulty of the Home Government in meeting the increased demand for recruits, a demand for which India is in part responsible. It has been the task of the Home Government, not of the Indian Government, to grapple with the difficulty, and their solution of it applies to the whole British Army, whether in or out of India. The Government of India do not propose to revert to the system in force before the introduction of short service, that is to say, an enlistment for ten years, with power to re-engage for a further term.

Capitation charge. Effect of short service.

They apparently would prefer a longer period of service than obtains at present, but as Indian service means practically an engagement for eight years, we are not sure that we rightly apprehend their wishes. Probably actual service of seven years in India, excluding from consideration men invalided home at an earlier date, would satisfy them. Their representative stated that he had no distinct proposal to lay before the Commission. Upon the whole, we do not consider that a case has been made out for an alteration of the short service arrangement as applied to India. It is, however, a point worthy of notice that the average service of 7,307 European soldiers who came back from India in the trooping season of 1895–6, was only 5 years 4 months and 19 days. We quote from a return which Sir Edwin Collen gives us. It shows that out of these 7,037 soldiers, 2,315 returned with service of less than 5 years. These, we presume, were invalided soldiers; but invalids are common to all systems of service. In order to understand the working of the present regulations, we think that the return should separate those invalided home from those returning at expiration of their engagement.

Appendix, No. 56, Vol. II., p. 386.

274. Upon the second point we have shown that by agreement between the War Office and the Indian Government the recruit does not now go out until he is 20 years of age, and we do not understand that objection is taken to that age. We have shown also that the figures of invaliding do not actually establish a contention that the young soldier is more liable to sickness than the older soldier. The percentage of invalided soldiers under 24 years of age is higher than that of soldiers invalided between 25 and 29, but if allowance be made for the trying character of the first year of service in a tropical climate, the difference would probably be much diminished. There is a wide difference of opinion among military authorities as to the relative values of the young and of the old soldiers. The point was argued before us, but we, of course, are not in a position to express an opinion upon it.

275. Upon the third point, deferred pay has been practically converted into ordinary pay, and we presume, therefore, that there is no longer ground for such apprehension as that entertained by Sir E. Collen.

276. Lastly, we think that the reserve must be regarded as a reserve for both England and India. It has been argued that in time of great emergency the reserve will not be available for India, as it might be required elsewhere. It is impossible to legislate beforehand for extraordinary emergencies, and possible, but very improbable, contingencies must be met as the circumstances of the emergency best permit. It appears then to us that the existence of a reserve is of distinct value to India. The maintenance of the reserve costs the Imperial Government 500,000*l.* a year, a charge which India does not share. India, therefore, has a call upon a force to which she does not contribute directly.

We cannot accept in its entirety Sir H. Waterfield's contention that India ought not to pay any charge but that of transport on drafts sent to her from the reserve. It has been argued that deferred pay was in effect a contribution towards the reserve; if that were conceded, the cost of the reserve would be (1) the expenditure incurred upon the maintenance of the reserve, (2) deferred pay regarded as a contribution towards the reserve. The Imperial Government defray the whole charge of the first item, and, according to the ordinary method of calculation, two thirds of the charge of the second item. India contributes nothing towards the first item, and one third towards the second. Upon this principle of calculation it is only equitable that if India made a demand upon the reserve, she should make a fair payment for the men so supplied. But this principle of calculation is no longer valid, because deferred pay has been abolished, a corresponding increase of ordinary pay being substituted for it, and this change strengthens the plea that India should make a payment if she draws upon the reserve.

But if Sir H. Waterfield means only that full capitation rate should not be paid upon drafts from the reserve increasing the effective force in India, we think that there is force in his contention. The capitation rate covers the greater part of the cost of enlisting and training the recruit, and if India were to pay full capitation rate on drafts from the reserve, she would in effect be paying twice over for the enlistment and training of the same man, if he had previously served in India.

While, therefore, we think that India should pay a fair charge on drafts from the reserve, we think also that that charge should be fixed in agreement between the two Governments, due regard being given to the circumstances which we have mentioned.

(2.) *Charges other than those of Recruiting covered by the Capitation Rate.*

Capitation charge.

277. We proceed to consider the services other than those of recruiting, which are covered by the capitation rate. They were made up in 1889-90, as follows :— Charges other than depôt charges.

	£
(1.) Agency	3,020
(2.) Maintenance of young officers of cavalry, artillery, and infantry on first appointment to regiments serving in India, and before embarkation (2 to 5 months)	4,769
(3.) Maintenance of young officers of Royal Engineers for India while under instruction (2 years and 2 months on an average)	5,462
(4.) Cost of training veterinary surgeons for India	600
(5.) Cost of examination of candidates for Indian medical service	481
(6.) Educational establishments—the net cost of each establishment is apportioned according to the number of officers on the Indian and Home establishments	37,065
(7.) Expenses of men awaiting discharge (including period of passage home)	33,259
(8.) Share of cost of staff of hospitals and discharge depôts, and expenses of invalids (calculated on actual number received)	45,441
	£130,097

Appendix, No. 50, Vol. II., pp. 376-7.

The Indian Government, in their despatch of 25th March 1890, advanced objections against each of these items.

Appendix, No. 45, Vol. II., p. 261.

(i.) *Agency.*

278. The agency charge has been abolished, and therefore no longer forms one of the services for which the capitation rate provides.

(ii.) *Maintenance of Young Officers before they embark for India.*

279. When a vacancy occurs among regimental officers serving in India, a young officer is chosen from Sandhurst or by examination to fill the vacancy, and for military reasons, as we understand, a period of three to five months elapses before he embarks. Part of this time is leave of absence customary on appointment.

The War Office incurs charges on account of this officer in the interval before embarkation, and makes a claim against India for the amount.

The Indian Government contend that these officers while in England form part of the British Army, and further, that as India pays a large contribution for the training and education of the officers required for India, Indian revenues should be relieved of a portion of this charge for young officers. The War Office replies that a young officer appointed to fill a vacancy in a regiment on the Indian establishment belongs to the Indian not the British establishment, and that any charges incurred on his behalf should be paid by India, to whom the officer belongs. Sir E. Collen does not suggest that the young officer should not be appointed until he actually embarks. We may assume, therefore, that there is a reason accepted by both parties for this interval between appointment and embarkation. The War Office does not attach much value to the services of a young officer immediately on his appointment. Regarding the question as one of business, we should say that the officer from the date of appointment belongs to the Indian establishment, and should be charged accordingly. The Indian Government, in the table attached to their memorandum, deal with the War Office claim for the three years 1885–6, 1886–7, 1887–8, amounting altogether to 26,000, and they propose a deduction of over 20,000. We think this a liberal interpretation of their suggestion that India should be relieved of a *portion* of the charge. The sum is stated somewhat at hazard, for it does not pretend to appraise officially the military value of these youths. The period includes the years in which the

Appendix No. 45, Vol II., p. 278.

Capitation charge.

large increase of the British Army in India took place, and that may account for the high average charge of 8,666*l.* In 1889–90 the claim of the War Office was only 4,769*l.*

(iii.) *Maintenance of young Engineer Officers under Instruction.*

280. This is a claim for the pay, servants allowance, barrack accommodation and mess allowances of young officers of the Royal Engineers, appointed to India, from the date of their first commission to their embarkation for India, a period somewhat exceeding on the average two years. The War Office asks reimbursement of this charge. It also charges India for the instruction and previous education of these officers. The contention between the Indian Government and the War Office is the same as that which we described in the previous paragraph. The Indian Government say that these officers, while at home, are available for Imperial service. The War Office replies that the value of a young officer's service is very small, and further that these officers belong to the Indian and not to the British establishment. We come to the same conclusion as in the previous case, and think that if the claim is treated as a business arrangement, the War Office is correct, and that the claim of the India Office is not very substantial in character. The Indian Government ask for a reduction of about 50 per cent. We cannot examine this proposal, as it is not supported by data. The total sum at issue is not very large, amounting in 1889–90 to only 5,462*l.*

Appendix, No. 45, Vol. II., p. 275.

(iv.) *Cost of training Veterinary Surgeons for India.*

281. This is a very small charge of 600*l.* a year. The Indian Government propose that no claim should be made on account of it, on the ground that these officers during their time of training in England can render service to horses on the British establishment. If, however, these officers are learning their business, and are not sufficiently proficient to attend Indian horses, they are probably not sufficiently proficient to attend English horses.

(v.) *Cost of Examination of Candidates for Indian Medical Service.*

282. This is also a very small charge of 400*l.* or 500*l.* a year, and the Indian Government propose to reduce it by half, as they consider the charge too high. If, however, the charge represents the actual cost of the service fairly assessed, the claim, viewed as a business transaction, is correctly put forward.

(vi.) *Educational Establishments.*

283. These establishments consisted in 1890 of the Royal Military College at Sandhurst, the Royal Military Academy at Woolwich, the Staff College, the Army Medical School, Netley, the School of Gunnery, Shoeburyness, the School of Military Engineering, and the Artillery College.

Appendix, No. 45, Vol. II., p. 275.

The Indian Government, in the table attached to their Despatch of 25th March 1890, take the War Office claims in respect of these establishments for the three years 1885–6 to 1887–8, and suggest a reduction of 45,720*l.* upon a total charge for the three years of 132,017*l.* or an average deduction of more than 15,000*l.* annually on an average charge of 44,000*l.* They would, therefore, apparently be content to pay about 30,000*l.* a year. The principle upon which they base their reduction appears to be this: (1) that interest on the cost of land and buildings belonging to these establishments should not be charged; (2) that allowance should be made for the fact that many of the expenses would be incurred, even if India did not take officers from these schools; (3) that India gives garrison instruction and therefore should not pay for home educational establishments; (4) that the computation of the numbers on which India should pay is not fair.

Q. 6034.

We understand that objection was not taken by Sir Thomas Seccombe, the representative of the Indian Government on Lord Northbrook's Committee, to the basis on which the War Office claim was made up, and we note that the last claim of the War Office submitted in detail and passed by the Northbrook Committee (that of 1889–90) charges a much reduced sum, viz., 37,065*l.*, for these educational establishments. This reduction is due in part to the giving up of any claim in respect of Hythe, and it would be interesting to ascertain whether it arises further from acceptance of other objections put forward by the Government of India. Sir E. Collen's evidence appears to deal with the larger charge only, viz., that of 44,000*l.* It appears

upon the first point that in consequence of the increase of the army (an increase due in considerable measure to the demands of India) it was necessary to increase the buildings at Sandhurst. The Indian Government declined to contribute to the cost, but they agreed to pay their share of rent upon the erection and construction of the buildings. Capitation charge.

We understand them to object now to any payment on account of rent. The War Office states that all officers required for the Staff Corps in India must now pass through Sandhurst.

The Government of India illustrate the second point by an objection to pay towards the charge of a school of experimental gunnery.

On the third point, they plead in reduction of the charge that garrison instruction is given in India, on account of which no payment is made by the War Office.

On the fourth point, they consider that the number of officers who have been through these colleges is less than the number on which the War Office bases its claim, as ascertained by the proportion of officers on the Home and Indian establishments respectively.

(vii.) *Expenses of Men awaiting Discharge.*

284. In the three years ending 1887–8, the claim of the War Office under this head averaged, as nearly as possible, 20,000*l.* a year. The Indian Government propose to reduce it to 10,000*l.* The last claim put forward in detail by the War Office and accepted by the Northbrook Committee, amounted to 33,259*l.* The difference between the charge as worked out by the Northbrook Committee and the proposal of the Indian Government, unsupported by facts, is remarkable. The Indian Government "think that there is no reason why India should pay the War Office for 32 days of "a man's service in England before his transfer to the Army reserve, assuming that "he has spent 28 days in the voyage from India, or why India should pay for 50 days "for invalids after their arrival in England. The transfer of the men to the Army "reserve should be quickly accomplished, and Indian revenues should not be charged "with the pay of the men for a single day after disembarkation, for they practically "then come on to the military strength of England. In the case of invalids before "discharge, the actual amount should be charged, and it should not be assumed that "every invalid is detained for 50 days after arriving at Netley." In reply, the War Office states that actual experience shows that on the average invalids actually stay 50 days at Netley. Appendix No. 45, Vol. II., p. 277.

(viii.) *Share of Cost of Staff of Hospitals and Discharge Depôts.*

285. The Indian Government commence their objection by stating that every kind of expense is entered in the accounts on which they are charged, including divine service, military police, and buildings. They next question whether invalids from India remain in Netley hospital as long as invalids from forces not in India. On this point we believe that the calculations upon which the charge is based were before the Northbrook Committee, and were not questioned on arithmetical grounds. Lastly, they plead that they ought not to be asked to pay the expenses of their invalids at Netley, because they have hospitals of their own in India. The Indian Government suggest a reduction of 16,000*l.* on the claim put forward by the War Office in 1887–8 of 30,421*l.* The claim passed by the Northbrook Committee for 1889–90 was 45,441*l.*

Conclusions.

286. It will have been seen that the Government of India claims a reduction upon each of the eight services which we have been reviewing. In considering these claims we have had in view a business-like adjustment of the relations between the two Governments, taking as our standard a fair and proportionate payment for the service rendered. The expenditure on the first five heads amounted in 1889–90 to 14,332*l.* No charge would now be made for agency—the first of these heads. The expenditure upon four of the heads is small in amount. The objections raised to the various items are somewhat petty in character, and would not, we think, be tenable upon the principle which we have laid down.

The three remaining heads, viz., educational establishments, expenses of soldiers awaiting discharge, and hospital charges, amounted to 115,765*l.*

Capitation charge. Conclusions.

287. On educational establishments we gather that the Government of India would accept a charge of about 30,000*l.* a year. The actual charge in 1889–90 was 37,000*l.* Dealing generally with the objections advanced, we think that India should pay a fair rent upon the buildings, proportionate to her use of them, and upon a reasonable assessment of their present value. If an establishment is part of the organisation of an army which is employed by both the Governments, we must assume that it is held by competent authority to be required for the efficiency of the army, and in that case the two partners should pay proportionately towards its maintenance. A different question arises when it is pleaded that the proportions as now assessed are not fair to one of the partners. The Government of India had reason for the remonstrance, in their Despatch of 25th March 1890, against the charge for the Hythe School, for the War Office withdrew the charge before 1889–90. The War Office measures the charge against India by the number of officers attached to the forces employed by Great Britain and India respectively. These officers belong to one and the same army, and are subject to the same rules, it must be assumed, as to education and training. In that case the proportional charge is fair; but the Government of India are not satisfied upon this point, and, if they can show that any class of officers whom they employ, and who form part of the numbers by which the proportionate charge is measured, is not subject to these rules, or if, for instance, the Staff Corps is in course of reduction, and the officers destined for it are in consequence reduced in numbers, the proportion should be revised. We do not attach great weight to the reduction in the charge for educational establishments put forward by the Government of India in their Despatch of 25th March 1890, for it does not appear to be founded on a calculation of the financial result of specific modification of the present arrangement.

288. The Government of India contend, and we agree with them, that soldiers returning from India should be passed into the reserve without delay. They point out that in some cases such men remain chargeable to India for 32 days after they arrive in England; in other cases for eight days. It appears to us that a soldier passing into the reserve is practically available for the reserve upon his arrival, and that India might be relieved of charge for him from that date, if he is not an invalid. The Government of India raise also a question as to the period for which invalids are charged against India after their arrival in England. It appears, however, that that period is based upon an actual average taken in hospital. That appears to us a convenient method of computing a charge for the capitation rate, which is to remain in force for a period of years.

289. We do not understand the objection of the Government of India to the inclusion of the cost of Divine service, police, &c., in the charge for hospitals. These items are part of the expenses of the institutions, and we are surprised that they should be questioned. Nor do we think it probable that Indian invalids are kept unduly long in hospital at the charge of India. It is quite intelligible that invalids from a tropical climate may require longer treatment than men falling sick at home or in temperate climates. We do not see that the War Office has any motive to keep men needlessly in hospital. These are small points, but we give greater attention to the plea that India tends the soldier from England arriving sick in India, and that Great Britain, therefore, should tend the soldier from India arriving sick in England. On consideration we are disposed to draw a distinction between soldiers invalided home and soldiers falling sick on the passage home. India tends soldiers sent out to her who fall sick on the voyage, and Great Britain reciprocally might tend soldiers returning to her who fall sick on the voyage. The case of invalids is different —Great Britain does not send out invalids to India, but India does send back invalids to Great Britain, and, so far, there is not reciprocity. Invaliding, in effect, is a consequence of service in a hot climate, and the employer of the invalid may fairly be expected to pay within reasonable limits for his treatment.

On the whole, we see no reason for immediately revising the capitation rate, so far as these services are concerned, and we think, as in the case of the recruiting services, that it might be left in operation for a further period of five or six years, but that a general revision should take place at that time. Advantage might, however, be taken of the interval to consider those points of moment upon which we entertain a doubt.

(b.) *Non-effective Charges.*

290. The non-effective charge at home, with which we are dealing here, consists of payments to the War Office for the pensions of officers and soldiers of Your Majesty's British Forces in respect of service in India. Capitation charge.

We have spoken generally of these charges in our remarks on Short Service, and we came to the conclusion that a case for re-apportionment was not made out, since under Short Service the pensions in respect of the British Force in India would be greatly reduced, and that pensions to non-efficient officers form a charge indispensable to an efficient army. We have before us no specific proposals for other re-apportionment of military non-effective charges. Conclusions.

(1.) *Pensions of Officers of the British Army.*

291. From 1870–1 to 1883–4, the Government of India capitalised and paid down its share of the pensions granted in each year to officers and men of *the British Army*. Capitalisation then ceased, and from 1st April 1884, the Government of India has paid the proporton attributable to service in India of the pensions granted subsequently to that date. We cannot, therefore, compare the actual charge to India of pensions granted to officers of the British Army before the 31st March 1884 with the actual charge in recent years. On the 1st April 1884, India was paying nothing on account of pensions granted to officers of the British Army between 1870 and 1883, her share of those pensions having been redeemed by the payment of a capital sum. On the 31st March 1895, the yearly charge was 205,000*l*., and the charge was growing. The increase during that period of 11 years was at the rate of about 18,600*l*. a year. These sums include India's share of the increased pensions granted to officers of the British Army in consequence of the abolition of purchase. The Government of India considers that the revenues of India should not be subjected to charge in consequence of that measure. This affords, therefore, a fitting opportunity for expressing our opinion upon the representations which the Government of India has made.

292. Up to the year 1870, commissions were bought and sold in the British Army, and under the "Purchase" system a large proportion of officers left the service by sale of their commissions, and without pensions. Thus, under "Purchase" the amount of pensions paid to officers of the army was small, and the Indian Government, employing a part of the British Army, shared, in due proportion with the Imperial Government, the benefit of this economy. But, after long discussion, the Imperial Government came to the conclusion that the Purchase system was bad, and detrimental to the efficiency of the army, and they abolished it; but when Purchase was abolished, it became necessary, (1) to compensate the Purchase officers, and (2) to provide pensions for officers who no longer retired by the sale of their commissions. The Imperial Government thought the measure so important that they laid on the British taxpayer a burthen of several millions for the first object, but they did not ask the Government of India to contribute to this compensation charge. Under the new system also they granted an increased scale of pensions to officers of the British Army, involving an increased charge on the taxpayer, and India has been required to take her share of this burthen. The increased pension charge was a part of the price to be paid for effecting a great reform; for it is evident that no army can be maintained in efficiency if means are not provided for retiring officers who become, from one reason or other, incapacitated for service. It is, in fact, a necessary part of the military charge. The Indian Government, however, do not view the measure in that light. They contend that Purchase was a purely English abuse, and that it was not right to make India pay for the pensions that followed abolition of the abuse. In fact, that she ought not to be burthened with the expense of removing a local abuse. It seems to us that this argument might have been put forward with some force, if the Imperial Government had asked India to provide a part of the compensation paid to "Purchase" officers, but India was not asked to share that burthen. She is only asked to take her share of the non-effective charge indispensable to an efficient army.

293. We do not consider that the Indian Government can successfully maintain their contention against the principle of the charge, and more especially since they, in the organization of their local European army, as well as of their Native army, had always maintained a system of pensions.

(2.) *Pensions of Non-commissioned Officers and Soldiers of the British Army.*

294. As we pointed out in the paragraphs of our report relating to short service, the pensions to non-commissioned officers and soldiers of the British Army will gradually diminish. Sir Ralph Knox laid before us a return showing the Indian share of pensions granted to non-commissioned officers and soldiers of the British Army in each year from 1878–9 to 1894–5. Taking the average of the three years, 1878, 1879, and 1880, we find that the Indian share of permanent pensions *granted* for the first time in each of those years amounted to 50,561*l*. From that time the amount *granted* in each year fell gradually, and almost continuously, and in 1894–5 the pensions granted amounted only to 14,681*l*. The War Office has calculated that under the ten-year system the normal amount of pensions granted every year would be 43,760*l*., working up to a maximum annual charge of 971,000*l*., and that the normal amount of pensions granted every year under the short service system would be 15,045*l*., and working up to a maximum charge of 320,000*l*.

Appendix, No. 59, p. 387.

(*c.*) *Chelsea and Kilmainham Hospitals.*

295. The War Office has referred to us the question as to "What proportion (if any) "of the cost to the public in respect of Chelsea and Kilmainham Hospitals should be "paid by India?"

Chelsea and Kilmainham Hospitals house a certain number of soldier pensioners who prefer maintenance in the hospital to living where they please upon their pensions. These pensioners do not receive their pensions after admission to hospital, but the cost of maintaining them in hospital exceeds the pension which they would otherwise receive, and the War Office considers that India should, as matter of principle, pay her proportion of that increased cost in respect of the Indian service of inmates of the two hospitals.

At present the Indian share of the pensions of soldiers admitted to hospital is received by the War Office, but is not paid to the pensioners. The amount so retained by the War Office is estimated at 3,388*l*. a year, and is equivalent to a contribution of that amount by India to the cost of her pensioners in the hospitals. The War Office estimates the actual cost of hospital pensioners which should be borne by India at 8,663*l*. a year, and we are, therefore, asked to say whether the difference between those two sums, viz., 5,275*l*. a year, or any part of it should be made good by India.

Q. 13,030. Sir Ralph Knox has explained to us that the War Office did not include this difference in its claim against the Government of India, considering that the balance of unclaimed prize-money, 43,817*l*., which the Chelsea Commissioners held, arising from Indian wars, might be considered as providing a partial set-off against the extra charge.

The Comptroller and Auditor General, however, drew attention to the fact that India was not contributing her share towards the cost of the hospitals, and in consequence of this action of the audit office, the Government decided to refer the point to us.

The Indian Government hold that the two hospitals would be self-supporting, if the moneys arising from unclaimed prize money in the United Kingdom (a sum of about 600,000*l*.) had been appropriated to their support.

296. The case of the War Office, from the business point of view, is reasonable. It is part of the British Army system to provide an asylum for a certain number of old soldiers who desire it, and India, as the employer of a large part of the British Army, should pay her share of the cost. Nor is it a complete answer to say that if the War Office had appropriated to the hospitals certain moneys coming into its hands from sources *unconnected with India*, it would not be necessary to make any demand upon India; that is to say, if Great Britain would only endow the hospitals with British money, India might escape her liability.

Looking, however, at all the circumstances of the case, we recommend that matters should be left as they are; that the War Office should retain the unclaimed prize-money arising out of Indian wars, which have come into its hands, and that it should not make demand on India for a further contribution on account of Indian pensioners maintained in the two hospitals. The point might be borne in ming when a general readjustment of claim takes place.

(d.) *Payment for Indian Troops employed out of India.*

Introduction.

Troops employed out of India.

297. We proceed to examine the question of the payment of troops employed in military operations beyond the external frontiers of India.

A list of these military expeditions down to 1885, and the apportionment of charge in each case, will be found at pp. 305 and 364 of Vol. II. of the evidence. To the expeditions there enumerated must be added—

(1.) The Burma war in 1886, in which all charges were borne by India.

(2.) The Suakin force in the Sudan expedition of 1896, of which India paid the ordinary and the United Kingdom the extraordinary charges.

(3.) The Indian troops sent to Mombasa in 1896, of which the whole expenses were borne by the United Kingdom.

(4.) The British troops recently (1899) despatched from India to South Africa, and the Indian troops sent to Mauritius, Ceylon, Singapore, and elsewhere in connexion with the same campaign, in which the United Kingdom bears the whole charge.

298. Under section 55 of the Government of India Act, the revenues of India shall not be applicable to defray the expenses of military operations carried on beyond the external frontiers of India without the consent of Parliament. This consent is obtained in each case by resolutions passed in both Houses.

It is clear that the passing of these resolutions is valuable as a public parliamentary ratification of the apportionment of charge determined on by the Cabinet, although, according to our system of party government, the apportionment fixed by the Ministry has never failed to be ratified by its supporters in Parliament.

299. Difficulties, however, invariably arise at an earlier stage of the proceedings, when the Home Government is endeavouring to come to an arrangement with the Indian Government as to the terms of appertionment that are to be submitted to Parliament. In all the cases enumerated above in which a charge has been placed on the revenues of India (except the Burmese war of 1886) the Government of India has strenuously protested, and has only submitted under protest. Much correspondence invariably ensues. The discussions that arise cause considerable friction, which it is desirable to avoid; and a sense of unfairness is created, and remains behind in the minds of the Government and of the people of India.

In order, if possible, to arrive at certain principles of common agreement, Lord George Hamilton, in his Despatch to the Government of India, dated 30th June 1896, laid down three propositions on this subject:—

1. That on all occasions when the temporary loan of a military force is urgently required, either by Great Britain or by India, such assistance will be promptly given, so far as the ability, resources, and situation of either country at the time may permit.
2. That if the object for which such assistance is required is one in which the Government supplying the troops has no special interest beyond that which must be common to all members of the Empire, the whole cost of the force, so long as it is required, including both ordinary and extraordinary charges, must be borne by the country that needs its assistance.
3. That if the circumstances are such that the Government supplying the troops has a distinct and special interest in the matter at stake, then, although the interest may be less strong than that of the Government requiring assistance, the Government supplying the troops should be content to bear, in one form or other, a portion of the burthen which the operations involve.

300. We concur, generally, in these propositions. Sir Donald Stewart and Sir James Peile, members of the Council of the Secretary of State, in recording a dissent from a resolution adopted by a majority of the Council, suggested the substitution in the third proposition, of "direct and substantial interest" for "distinct and special interest," and we prefer the amendment.

These propositions, however, do not carry us very far; they do not say who is to define a direct and substantial interest. The real difficulty is to discover the means by which the interests of the two Governments may be most accurately and authoritatively ascertained.

301. We would lay down in the first place, the principles deciding this issue, which must admit of complete reciprocity in adoption. Lord Cross, speaking as Secretary of State for India, and having in his mind a loan of Indian troops to the United

Troops temporarily borrowed.

Kingdom, laid it down in a despatch to the Government of India of the 3rd February 1887, that he had urged upon the Treasury that "in the event of any occasion arising "hereafter for the employment of Indian troops on duties not directly attributable "to the requirements of your Government or at a distance from India, no portion of "the expense should be charged against India without your Excellency's concur-"rence." Sir Henry Fowler, who had held the same position, said in the House of Commons on the 6th July 1896:—

"Who is to be the judge as to whether India has this interest or not? I think Lord Cross gave the right answer when he says the Government of India."

302. If these declarations are to be taken in an unqualified manner, they will attribute to the Government of India (apart even from the Secretary of State in Council) an independence of authority, which has not prevailed, and in our judgment never can prevail. The Governor-General must, subject to the alternative of resignation, accept and carry out the orders he receives from the Secretary of State in Council. The Secretary of State, subject to a similar alternative, must accept the decision of the Cabinet, of which he is a member.

303. We do not undervalue the check involved in the power of resignation, but it seems to us clear that the final authority determining the relative interests of the United Kingdom and of India in any matter must reside in the Home administration, and in the Parliament which supports it with its confidence. A case has been suggested in which a majority of the Council of India might differ from the views of the Cabinet as to an appropriation of the Indian revenues for expenses of military operations beyond the external frontiers of India. In this case the Cabinet would ask the consent of both Houses of Parliament to the charge, and this consent, if obtained, would relieve the Council of responsibility.

304. But whilst we are strongly persuaded of the truth of the position thus stated, we feel that justice would most probably be secured in any decision taken hereafter, if principles could be formulated which should guide, although they might not govern, the formation of any such decision. A desire that such principles should be ascertained and declared has been expressed by Mr. Balfour and Lord Salisbury.

Mr. Balfour said on the 6th July 1896:—

"I should have asked the House to consider whether the time has not arrived when we might, with advantage both to India and to England, constitute some kind of tribunal of arbitration (if I may use the phrase) for the determination of questions of this sort—some tribunal in which the interests of India and Great Britain should be alike and equally represented; which might have authority in this country—an authority which, perhaps, neither the expressions of the Indian Government, speaking for India, nor the expressions of the British Government—speaking, as they endeavour to do, not for Great Britain alone, but for the whole Empire—do not carry with them."

Lord Salisbury even went further, and expressed a wish for the establishment of a tribunal. He said, 16th July 1896:—

"The whole subject is under investigation by a Royal Commission, who, it may be hoped, will furnish suggestions for regulations to which the Government of the day may be able to conform, without any fear that the steps which they may think necessary for the defence of the Empire will be made the subject of discussions which may be injurious to the interests of the Empire. . . . . Early in the present year I was so impressed in favour of such a course being adopted, that I laid before my colleagues a proposal for the appointment of a tribunal which should be so impartially composed as to obtain the confidence of the taxpayers of both England and India, which should consider the relative interests and rights of the two portions of the Empire; but, when we came to consider the details of the proposal, we came to the conclusion that we could not carry such a scheme into effect until the Royal Commission had made their report. I much regret that it was necessary to postpone the consideration of such a proposal, because I am satisfied that, if it were carried into effect, we should have reached a solution of the difficulty which would operate in a far better manner than the present system does, and would enable us in many ways to show our sympathy and generosity to our Indian fellow-subjects."

305. For the reasons already given, we consider that such a tribunal could only be one of mediation, and that any principles which could be enunciated, could not have a

final compulsory character; but we think that principles might be laid down which would have a most powerful influence when future decisions are under consideration, whilst a tribunal (if it could be formed) would certainly facilitate their application to future circumstances. Troops temporarily borrowed.

306. It is in this light that we have considered the proposals submitted to us in evidence by Lord Northbrook. In the first place, his Lordship, dealing with the employment of troops outside India, finds in the geographical scene of the operations of the troops a clue to the solution of the problem of contribution. He thinks that the United Kingdom should pay all the cost of forces in Europe, and that within a certain area outside of Europe the question should be considered whether India has a direct and substantial interest in the object for which the troops are required; and that, if she has such an interest, a partition of cost should be made. Qq. 14,182–85.

307. We agree with his Lordship that the principle of geographical distribution might be accepted as affording fair *primâ facie* ground for the allocation of cost, and that it would be desirable to lay down the principles of such a distribution in an official paper to which the Governments of the United Kingdom and of India should be parties. We accordingly submit for consideration the heads of a Treasury minute which might be drawn with that object.

The minute, approved on the one hand by Your Majesty's Government, and on the other hand by the Secretary of State for India in Council after consultation with the Government of India, might provide—

1. That India has not a direct and substantial interest in the employment of forces in Europe; in Africa, west of the Cape of Good Hope; in Asia, east of China.
2. That India has a direct and substantial interest in keeping open the Suez Canal, and in the maintenance of order and established government in Egypt so far as the security of the Suez Canal is affected thereby. This interest might extend to the coasts of the Red Sea only so far as to maintain the inviolability of that shore, but not to the Soudan, or further extensions of Egypt up the valley of the Nile or its affluents.
3. That India may have a modified interest in questions affecting the East Coast of Africa as far as Zanzibar, and the African islands in the Indian Ocean, except Madagascar.
4. That India has no direct or substantial interest in the African coast south of Zanzibar.
5. That India has a direct and substantial interest in questions affecting Persia, and the coast and islands of Arabia and of the Persian Gulf.
6. That India has a direct and substantial interest in questions affecting Afghanistan and that part of Central Asia which is adjacent to the borders of India or Afghanistan.
7. That India has sole interest in punitive expeditions on her borders.
8. That India has a direct and substantial interest in questions affecting Siam.
9. That India has a modified interest in questions affecting China and the Malay peninsula.
10. That India has no direct or substantial interest in Japan or countries or islands east and south of China.
11. That special cases may arise giving to India a direct and substantial interest in questions connected with Europe or other territories in which the minute declares her to have, as a general rule, no interest.
12. That in every case where the two Governments are not agreed, no contribution should be made by India until the sanction of Parliament has been obtained.

308. In the next place, Lord Northbrook would apparently give the Government of India a power of absolute veto upon contributions proposed by the Imperial Government, but he points out that "this arrangement would be quite outside the statutory rights of the Secretary of State in Council and the power of Parliament." It might, however, be provided that if the veto of the Indian Government is over-ruled at home, the veto, together with the decision over-ruling it, must be laid before Parliament, and that no charge should be imposed upon India until it has been approved by Parliament. Qq. 14,168–70.

We think it worthy of consideration, as an alternative, whether in the event of the two Governments of the United Kingdom and India not agreeing upon the question of "distinct and special" interest, reference might not be made to a tribunal, such

Troops temporarily borrowed.

as Lord Salisbury suggested, before the final authority is invoked. At this point it must be remembered that the 55th section of the Government of India Act (1858) provides that the revenues of India are not to be applied to any expedition beyond the frontiers of India, except with the consent of both Houses of Parliament. Lord Northbrook considers that in the case of the Perak Expedition, which took place during his Viceroyalty, the statute was distinctly neglected by the Home Government, and that an unconstitutional charge was made upon India, notwithstanding a remonstrance from the Government of India.

For the object in view, a committee, might, perhaps, be constituted of two members appointed by Your Majesty's Government, and two members appointed by the Secretary of State in Council, and of a Chairman to be selected by the four members. This Committee should make a report to the Government, which should be presented to Parliament, and the Government, within a prescribed time, should present its final determination for the ratification of the two houses. The Treasury Minute would aid the Committee and the two Governments in arriving at a decision.

3.—Naval Charges.

309. We consider next the contribution made by the Government of India towards the charge of vessels of the Royal Navy stationed in Indian waters.

Up to the year 1862 India maintained a navy of its own.

The Indian Navy was created by Charters of Charles the Second and James the Second authorising the East India Company to maintain an armed naval force for the defence of its possessions and for the prevention of interference by "interlopers" or trespassers on the trade monopoly of the Company. This force appears to have developed into the Bombay fleet. Subsequently a naval force was established in Bengal, and in 1829 the two forces were joined and became the Indian Navy. It is difficult to define the respective duties and responsibilities of the Royal Navy and of the Company's navy in Eastern waters during the last century, during the great war, and down to the termination of the trade monopoly of the East India Company in 1834. It may, however, be generally stated that the Crown in those times did not and could not keep any considerable force in Eastern waters for the protection of India and of Indian trade, and that the Company relied in great measure upon itself for the defence of its own interests against enemies or against English trespassers on its privileges. A great change, however, took place when the China trade was thrown open in 1834. The Company might be required to maintain at sea its own monopoly, while that monopoly continued, but it could not be expected, under the new order of things, to guard the interests of its competitor, the ordinary British trader. Open trade with China and Japan, and the gradual growth of Australasian commerce, threw new and increased responsibilities upon the Royal Navy. The process was gradual, and necessity for formal partition or definition of the respective duties of the Royal and Indian navies probably did not arise. The Secretary of State, in his despatch of August 30th, 1861, testified to the efficiency with which the Indian Navy had discharged the various local duties for which it was "mainly organised," but, he added, that it had constantly been employed at a distance from the coast of India in the suppression of piracy and of the slave trade, and also in regular warfare. For instance, we note that it had co-operated with the Royal Navy in the China war, in the Borneo expedition, and in the New Zealand war, and an Indian naval squadron was for some time associated with a Royal squadron in the China seas. No payment appears to have been made by Great Britain in acknowledgment of these general naval services rendered by the Indian Navy in Eastern seas, and that fact supports to a certain extent the contention that no partition of duties had been made between the two navies. The Royal Navy was small, and comparatively few Royal ships could be detached for service in Eastern seas. The Indian Navy, therefore, supplemented the Royal Navy, and the two forces acted together as the exigencies of the moment made it convenient. The Secretary of State for India, in a letter to the Admiralty, October 20th, 1862, stated his opinion that the general defence, the protection to "trade generally, and the measures for putting down the slave trade on the East Coast "of Africa, which had hitherto been performed, partly by H.M. Navy, partly by the "Indian Navy, should be undertaken altogether by H.M. Navy."

Qq. 6923, 6927.

310. For the years 1851 to 1857 the Indian seagoing fleet in Indian waters, viz., the Red Sea, Arabian Sea, Persian Gulf, and Bay of Bengal, appears to have consisted, on the average, of about seven steam frigates, and as many sailing vessels, apart from receiving ships and surveying vessels. It was increased during the Indian Mutiny. The published accounts do not afford the means of accurately stating the cost of this fleet, but an approximation to it can be arrived at from the ordinary charges at Bombay, which seem to have consisted in the main of that cost, exclusive of charges in England. They amounted in the years 1861–2 and 1862–3 to Rx. 358,000. Furlough allowances and pensions to the Indian Navy paid in England in those years amounted to 37,000*l.** Lieutenant Low, in his history, says the average annual cost for the 10 years, 1853 to 1862, was probably less than Rx. 350,000. Lord Rosebery in his award put the cost at the time of the abolition of the sea-going fleet at over 300,000*l.*, and the Treasury, in their Minute of the 12th July 1892, stated that they were well within the mark in estimating it at 300,000*l.*

Naval Charges Appendix, No. 46, Vol. II., p. 315.

In 1861, when the Mutiny had been quelled and when order had been re-established, the financial condition of India required serious consideration. In that year the Viceroy wrote to the Secretary of State recommending that Her Majesty's Government should place a force of ships at the disposal of the Indian Government for the naval defence of India, that the force should never be withdrawn without the consent of that Government, and that the cost of the force should in part be defrayed out of the revenue of India; that the Indian Navy should then be abolished, and that a transport service should be created in its place. Sir Charles Wood, then Secretary of State, did not accept this suggestion, holding that "it is contrary to the true "principles of naval warfare that any portion of the naval force of a country should be "confined to the defence of one particular place." Finally the Indian Navy was abolished in November 1862, and the Admiralty undertook the general naval defence of India, the protection of her trade generally, and the putting down the slave trade on the Eastern Coast, without at that time asking for a contribution from Indian revenue.

App. No. 47, Vol. II., p. 359.

Upon this point the Admiralty remark that, as far as they are aware, the question of charge was not then discussed or considered. They point out that an arrangement transferring permanently to the Imperial Exchequer the charge hitherto borne by India could not have been made without the assent of the Treasury, and that the Treasury was not consulted.

311. This arrangement continued in force from 1862 to 1869. On the 23rd January, 1869, the Admiralty raised the question of a contribution from India. Writing to the India Office they said:—

"My Lords would venture to suggest, for the consideration of His Grace the "Secretary of State, whether the time has not arrived for adjusting the proportions "in which the cost of the naval squadron on the East Indian Station should be borne "by naval votes and by the revenue of India. The entire expense of that part of the "squadron employed on the suppression of slave trade on the East Coast of Africa will "be provided for out of Imperial funds; and my Lords would propose that the cost "for the maintenance of the ships employed in the Bay of Bengal, the Arabian "Gulf, and the Persian Gulf and the Red Sea should be charged on the revenues of "India, observing that the strength of the squadron will have to be modified to meet the "increased duties required to carry out the policy of the Indian Government in the "Persian Gulf." They proposed that India should make a contribution of 70,000*l.* a year towards the service, that being the assumed cost of a naval force of 1,000 men at 70*l.* per man.† After some correspondence this contribution was accepted, and it was paid from 1869 to 1887. In the latter year, the number of ships in the squadron was diminished, and the contribution was reduced to 38,500*l.* a year, together with a yearly payment of 5 per cent. towards the cost of a vessel in the Persian Gulf. The Imperial Government, however, thought this contribution insufficient, and the Treasury urged a reconsideration of the question. A long correspondence ensued, and the two Governments being unable to come to agreement, the question was referred in 1891 to a Conference which met at the Foreign Office under the presidency of the Prime Minister, Lord Salisbury, and at which the Treasury, the Admiralty, the Foreign Office, and the India Office were represented. The

* This charge, however, included pensions payable to the Bengal Pilot Service.

† An additional charge was made against India for coal used by H.M. Vessels in the Persian Gulf.

Naval Charges.

following is an extract from a memorandum recording the conclusions at which the Conference arrived :—

"The basis of 70*l.* per annum per man is objected to by the Treasury and Admiralty as obsolete. The Indian Government is to be consulted as to the number and class of ships required in the Persian Gulf, and off the coasts of India for Indian purposes. When that number is settled by the British and Indian Governments jointly, it will be arranged that the ships are not to be employed beyond certain limits to be agreed upon, except with the consent of the Indian Government. They will be under the control and orders of the Naval Commander-in-Chief, to whom will be sent the wishes of the Indian Government, with which it will be his duty to comply. India is to pay the whole cost, effective and non-effective, of them.

"Special reference was made, in this connexion, to the example of the Australasian Colonies (which are contributing liberally for the protection of their floating trade)."

312. The two Governments, however, were unable to agree upon a definition of the term "Indian purposes" used by the Conference, and after a long correspondence it was decided in 1894 to refer that question to the arbitration of Lord Rosebery, then Prime Minister. His Lordship undertook the duty, and, on the 19th of February 1895, he made the following award :—

"10, Downing Street.

"When in 1862 India gave up her fleet, that fleet undertook (at a cost of over 300,000*l.* per annum) in conjunction with the Imperial Navy—

"1. General defence.

"2 Protection of trade.

"3. Suppression of slave trade locally or on East Coast of Africa.

"[I am aware that the India Office contests this definition of the responsibilities of the old Indian fleet, but the correspondence between the Admiralty and the India Office in 1862 does not appear to me to be susceptible of any other interpretation than that which I have given above.]

"As regards the last of these three functions, it may at once be laid down that India should not be called upon to contribute to anything but the suppression of the local slave trade.

"As regards the second, it may be admitted that India cannot be asked to undertake the entire protection of her general trade. That she should, however, contribute nothing under any circumstances to that protection, seems to be a proposition difficult to maintain.

"The general and effective defence of her own waters, and those of the Burmese Empire, as well as a certain surveillance of the coast of Siam, do certainly fall within her province.

"This last is no doubt a new function, but it is entirely bound up with our Indian Empire, its growth and its changed conditions. It is, therefore, distinctly an Indian purpose.

"In consideration of India carrying out these objects in a thoroughly efficient manner, she might be exempted from any further naval responsibility. But I am of opinion that the arrangement now to be made by the two departments should, in the interests of both, be subject to periodical revision at fixed intervals.

"My conclusions, therefore, are :—

"(1.) That the old Indian Navy did perform or co-operate in the performance of duties more extensive than are now admitted under the expression 'Indian purposes,' as limited in the India Office case.

"(2.) That this expression cannot be limited to merely maritime police and the repression of piracy, but must be held to include some portion, at any rate, of the duties devolving on the Royal Navy for the defence of India and the protection of trade in Indian waters.

"(3.) That the transaction of 1862 represented at most a temporary waiver of the claim of the Imperial Government to a contribution from India in respect of the performance of those duties.

"(4.) That in any case nothing then said or done could affect the right of the Imperial Government to raise such a claim on its merits at any subsequent period.

"(5.) That the basis on which such a contribution should be calculated does not admit of a permanent definition, but should be settled between the Home and Indian Governments from time to time at fixed intervals of, say, 10 years."

Naval Charges.

It was agreed between the two Governments that effect should be given to the decision of the Foreign Office Conference and to the award of Lord Rosebery. India has to maintain the charge of ships required for Indian purposes, and 5 per cent. upon the cost of their construction. The Admiralty held that five ships of 6,605 tons were required, and calculated the annual cost of these ships at 117,000*l.* in addition to a separate charge (4,000*l.*) for the repairs of the "Sphinx." The Indian Government urged that a smaller force of 3 ships of 750 tons only were necessary. The view of the Admiralty prevailed, but the Imperial Government agreed after the first year to reduce the annual contribution from 117,000*l.* to 100,000*l.*,* and they waived claims on account of previous years amounting to 183,000*l.* This arrangement will terminate in 1901. The Secretary of State for India accepted it with reluctance in a despatch to the Government of India dated the 26th June 1895. He expressed himself as follows: "But as to the annual payment, I was of opinion that while a "reference to arbitration would probably not result in better terms than those offered "by the Admiralty, it might possibly increase the Indian payment beyond that which "the Admiralty were willing to accept. I decided, therefore, to accept the proposed "compromise, which is, I am satisfied, the best arrangement which could be secured "in the interest of India."

The India Office, however, appear subsequently to have somewhat modified their view, for on the appointment of this Commission, they laid before us a memorandum on the subject. This memorandum states that in view of the decision given by the Prime Minister, the India Office did not desire to dispute the arrangements recently made upon any arithmetical or technical grounds. But the attention of the Commission was requested to the broad question whether it is right to exact from India within 17,000*l.* of the full charge, effective and non-effective, of the squadron, seeing that—

Appendix, No. 48, Vol. II., p. 370.

"(1.) Although the admiral is required to comply with the wishes of the Government of India when communicated to him, still the ships are not at their disposal in the same degree that the Army is.

"(2.) The vessels not employed in the Persian Gulf are under the command of the Admiralty, and must be occasionally employed on other than Indian services (*see* Treasury letter of June 30th, 1888) for which India gets no return.

"(3.) The number and class of the vessels employed is not that which the Government of India think necessary, but that which the Admiralty determine."

313. We have taken the subject into consideration, and we have received evidence from representatives of the Government of India, and of the Admiralty. Captain Hext, Director of the Indian Marine appeared before us on behalf of the Government of India. He argued, in fact, against the principle of any contribution by India for naval protection. If so, it appears to us that he differs from, and goes beyond, the views of the Government of India itself as expressed in 1861, and the views of the Secretary of State as expressed in 1895, and in the memorandum before us.

We confine ourselves to the question put by the Secretary of State. He asks whether, under all the circumstances, it is right that the Imperial Government should exact from India within 17,000*l.* of the full charge effective and non-effective of the squadron of the Royal Navy detached for the service of India.

The situation is as follows:—

India maintains a local marine force for local purposes, which are defined in the preamble of the Indian Marine Act of 1884. These purposes are the transport of troops, the guarding of convict settlements, the suppression of piracy, the visiting of lighthouses, the relief of wrecked or distressed ships, the survey of coasts and harbours and other local services. This force consists of 10 sea-going ships and five river steamers. Further, India is responsible for the defence of her coasts, and with that object she has constructed at her own cost and keeps two turret ships and several torpedo boats and torpedo destroyers. The Admiralty maintains and works these defence vessels in return for an annual payment by India of 61,000*l.* The Indian Government has built and maintains a dock at Bombay chiefly for the accommodation of trade, but of service also, free of charge, to Your Majesty's ships. Lastly, the Admiralty undertakes the general naval defence of India, and the protection of her

* A further charge is made against India for coal used by H.M. ships in the Persian Gulf, and on other services performed at the request of the Indian authorities.

Naval charges.

trade, and India contributes towards the cost of such general defence an annual sum of 100,000*l.**

The question of the Secretary of State refers to the last of these arrangements.

We have shown that India formerly maintained a navy of her own, that her fleet not only took part in the general defence of her coasts and trade, but co-operated with the Royal Navy on expeditions far remote from India; and that it entailed on the Indian exchequer a charge, estimated in days less costly than the present, at something over 300,000*l.* This was the charge borne by India which the Crown took over from the Company. We have shown also that the Government of India proposed, in 1861, to abolish the Indian Navy, offering to pay a yearly contribution to the Imperial Government if the Admiralty would undertake the naval defence of India; that the Indian navy was abolished, and the Indian exchequer relieved of the heavy charge which related to naval defence; that the Royal Navy has undertaken the duty of defending India by sea; that during the first six years of the new arrangement no contribution was asked from India in respect of it, but that from 1869 India has paid a contribution, varying from 70,000*l.* to 40,000*l.*, and finally fixed upon principles laid down by two prime ministers, Lord Salisbury and Lord Rosebery, at 117,000*l.* for a period ending in 1901, reduced with the consent of the Admiralty and Treasury, to a round annual sum of 100,000*l.* The estimate of 117,000*l.* does not represent the cost of all the vessels of the Royal Navy on the East Indian station. It represents the charge of those vessels which the Admiralty think necessary for the defence of India. Further, it represents only the specific charge of so many vessels of a certain tonnage and so many men. It does not represent the proportion which that tonnage and that number of men would bear to the tonnage and number of men in the whole navy. No general charges, therefore, are included. Indeed, it cannot be said to be otherwise than a moderate estimate, when we compare 100,000*l.*, the sum which the Admiralty asks, with the sum which the Government of India did not think excessive in the days when the Indian Navy existed.

When, therefore, we are asked whether India ought to pay a contribution, moderate in itself and which is considerably less† than the estimated actual cost of the squadron detached for her defence, we can only answer that the contribution asked of her is not excessive. That squadron is not a full measure of the naval aid which the Imperial Government renders to India. The British Navy, not that small squadron, constitutes the reserve upon which, in case of naval emergency, India would draw, and to that reserve India does not contribute.

On the other hand, it is argued that the Colonies are more liberally treated than India, but in considering this plea we must draw a distinction between Colonies. Malta, Gibraltar, Singapore and Hong Kong are Imperial coaling stations or garrisons. They are essential to the United Kingdom as a great Naval Power, and they do not enter into the comparison. The plea applies to the great self-governing colonies, Canada, the Cape, Australia and New Zealand.‡ It is true that these colonies made no contribution to Naval Expenditure at the time when the Indian Navy was abolished, but in 1862 these colonies had sparse populations, and were only beginning the career under which they have advanced to the rank of States forming part of Your Majesty's Empire. The time had not arrived for calling on them to acknowledge Imperial obligations. Australia and the Cape, however, now contribute to their naval defence, and though their contributions differ in detail from the contribution which India makes, they do not, we believe, compare unfavourably with it. We do not think that a reduction of the contributions can fairly be based upon this plea.

314. So far we have considered the general reasons which may be advanced for or against the contributions; but the India Office base their claim on specific reasons: (1) that, although the admiral is required to comply with the wishes of the Government of India, still the ships are not at the disposal of India as the army is; (2) that the vessels not employed in the Persian Gulf must be occasionally employed on other than Indian services. We do not think that these pleas constitute a reason for a reduction of the contribution. The Foreign Office Conference laid it down that the

* Any outlay which may be incurred in repairing the Sphinx, one of the ships of the Royal Navy on the East India station, is charged separately to India; also the cost of coal used by ships of the East Indian squadron when employed in the Persian Gulf, or on the service of the Government of India.

† The cost of the squadrons is 117,000*l.*, the actual contribution 100,000*l.* Therefore the Indian Exchequer pays, in round figures, 86 per cent. of the cost, the British Exchequer, 14 per cent. besides those general charges which form a heavy item in the naval estimates, but which cannot be apportioned out among the ships.

‡ Halifax, Simons Bay and Trincomalee are also coaling stations, which it is the duty of the Imperial Government to maintain and defend.

ships are not to be employed beyond certain limits to be agreed upon, except with the consent of the Indian Government. The ships are to be under the control and orders of the Naval Commander-in-Chief, to whom will be sent the wishes of the Indian Government, with which it will be his duty to comply. We understand that these conditions are complied with, and they appear to us to secure to the Government of India a sufficient control. Naval Charges.

(3) The India Office further object that the number and class of vessels is not that which the Government of India think necessary, but that which the Admiralty determine. We think that the contention of the Government of India on this point is worthy of further consideration. They say that they require for the police of their coasts a vessel of the tonnage of the "Sphinx" (1,130 tons), and two smaller vessels (755 tons). The Admiralty has replied that vessels of this size do not meet the requirement of Lord Rosebery's decision that Indian purposes include some portion of the duties devolving on the Royal Navy for the general protection of trade in Indian waters. The Admiralty, therefore, contends that the "Marathon" (2,950 tons) must be one of the ships, the detailed cost of which is to be paid by the Indian Government. The Government of India on their part agreed, though unwillingly, to include the "Brisk" (1,770 tons) among the ships for which they are to pay 'in accordance with Lord Rosebery's award.' But for the police of their coasts they thought the "Sphinx" and two vessels of the "Pigeon" class (755 tons) sufficient, the cost of these three being 53,881*l.* The Government of India is bound to satisfy the two-fold requirement of Lord Rosebery's award, but it does not necessarily follow that India should pay her contribution to the general charges of the Royal Navy in the shape of the detailed cost of particular ships. If ships of the size and number which the Government of India require for the special purpose of coast police were supplied at the actual cost, and the balance of the 100,000*l.* were paid over in the lump as the contribution of India to the general cost of the Navy, it seems probable that the cause of much friction would be removed. The admiral would have a freer hand, while his responsibility for fulfilling all duties attaching to the Royal Navy would remain precisely the same. We think that there is nothing in Lord Rosebery's award to debar the Government of India from representing their case from this point of view, if they think that their relations with the Admiralty may be thereby placed on a more satisfactory footing.

Letter of May 30, 1895. Appendix No. 46, Vol. II., p. 344.

Letter of May 23, 1895. *Ibid.*, p. 343

315. We cannot, therefore, conclude that the India Office has made out a case for a further reduction of the contribution; and we think that, as Lord Rosebery's award was only given in 1895, the present arrangement might continue in force for five years beyond 31st March, 1901, the date at which we think the financial relations between Great Britain and India in regard to Army, Navy, and Civil Service might be reviewed with advantage.

II. SETTLEMENT OF ADMINISTRATIVE CHARGES.

316. Our report has shown that questions of financial administration are constantly pending between the two Governments, and that the Home Government undertakes various services for the Indian Government, or in which the Indian Government has an interest. Difficulties arise in adjusting the claims which the Home Government puts forward in respect of such services, and these difficulties lead to protracted official correspondence with no satisfactory result.* It is clear that such differences between the two Departments can only be decided by arbitration; but it is essential to the principle of arbitration that the award of the arbitrator should be accepted as final until such time as may be appointed for a revision of arrangements. This rule has not always been fully understood in the discussions which have taken place between the two Governments, and we would urge the absolute necessity of its observance if arbitration is in future to terminate inconvenient and fruitless disputes. Upon these disputes Lord Northbrook said "I entertain the very strongest opinion, and the "same opinion has been expressed by the Government of India in Lord Lansdowne's "time, and I think it has been expressed by Lord Lansdowne himself in Parliament. "It was expressed quite recently very strongly by Lord Elgin's Government. I think "that these controversial questions between the two Governments—I am going to "use a strong word, but I do not think it is too strong—are almost a scandal "* * * I cannot express my opinion too strongly upon the political

Q. 14,257.

* For instance, see Appendix, No. 85, Vol. III., p. 374, on the subject of the cost of Ordnance Stores—a question in regard to which we have not considered that we had sufficient material before us to enable us to arrive at a satisfactory conclusion.

" importance—I should almost say necessity—of some arrangement being made " which will put an end to these controversies."

Again, he said, " All these little discussions are exceedingly annoying and wearisome
Q. 14,305-6. " * * *. Supposing that some arbitrator could be accepted between the " War Office and the India Office who could have no special knowledge of the subject " and no connection with the Government of England or the Government of India, " and that a case could be agreed upon between the Departments that could be put " before him rather in the way of legal arbitration. I really think that might be " accepted as a way of settling a great many of these questions. * * * " I cannot suggest anything better than to take a sensible judge of high character " accustomed to deal with such questions, like the late Mr. Justice Hannen." If the arbitrator wanted further information beyond the cases put before him "let him ask for it: do not put experts alongside of him at all."

317. We agree with Lord Northbrook, and think both Governments might trust on these departmental questions to the perfect impartiality of a man of judicial position. We believe, moreover, that if the Departments knew that their cases would come before such an arbitrator there would be an anxiety, especially on the part of the disputant who had the weaker case, to come to agreement. We believe that the Departments themselves would be glad of a ready mode of settling their disputes, and we accept Lord Northbrook's views as to the political importance, the necessity, it may almost be said, of an arrangement which will put an end to these controversies. It would, of course, be well understood that the arbitrator appointed for this purpose would not deal with questions of policy. Differences of opinion upon departmental questions would alone be referred to him, but it must be part of such an arrangement, if it is to be effective, that both Governments should bind themselves beforehand to accept loyally the arbitrator's award.

III.—LIBERAL TREATMENT.

318. We come now to the last and most difficult section of our Report, that which deals with the appeal for liberal treatment. The claim of the Government of India is twofold. (1) They have asked specific reductions on various services, and (2) they appeal generally for liberal treatment in the apportionment of common charges.

319. (1) We have dealt with the claims for specific reductions in previous sections of our Report, and in examining them, we have, in the main, considered the two Governments as partners in certain common services towards the cost of which each Government makes a proportionate contribution. We have in several instances recommended that the Imperial Government should take a larger share of the cost, but in no instance have we proposed that the contribution of India should be increased.

320. We must be careful to note the aspect in which this question of liberal treatment comes before us. The India Office raises no objection to the calculations by which the present effective charges are arrived at, nor as to the method of dividing the non-effective charges. The principal item under effective charges is the sum obtained by applying a capitation rate which covers the charge for recruitment and some other items, and which was fixed by Lord Northbrook's Commission for 1890-1 and 1891-2, and has since been continued from year to year. The capitation rate is accepted for the time being both by the War Office and the India Office, both departments acquiescing in its continuance for the present. We are therefore not called upon to examine in detail the calculations on which it is based. The War Office is prepared to argue that the charges which are represented by it might be higher, but the proper time to consider this contention will be when the calculation is revised. The India Office, while not questioning the calculations for existing apportionment, invites our attention to certain " general principles of great importance, as militating against the equity of a merely arithmetical division of the charges." These principles are of a general nature, distinct from the calculation of the fair cost of the services paid for, and it is not beyond our duty to form an estimate of their value. We must, therefore, keep in mind that the India Office does not seek to open up the capitation rate, but urges some general considerations which are held to make against a strict enforcement of the financial bond.

321. (2) The memorandum* laid before the Commission by the Financial Secretary of the India Office states, in the most effective manner, the claim for liberal treatment. We take from it the leading points upon which the Secretary of State relies. Liberal Treatment.

A Select Committee of the House of Commons reported on Indian finance in 1874. They stated that they had received an impression from papers and evidence before them that charges had in some instances been imposed upon India which ought to have been borne by England. They had, however, been assured by various witnesses that a very general desire prevailed among the different English departments not to throw any charge on India improperly. The Committee strongly insisted on the importance of securing for India strict impartiality in all her financial arrangements with England. They agreed in the opinion which had been "very emphatically "expressed by the Marquis of Salisbury, that the most effectual way of securing "financial justice for India was for the House of Commons to be constantly watchful "on her behalf."

The Committee proceeded: "They cannot lay down too strongly the position that "the English estimates ought not to be relieved at the expense of the Indian revenue, "but that the Secretary of State for India in Council has the constitutional right of "refusing to pay for objects in which he considers that India has no interest. At the "same time India, as a component part of the Empire, must be prepared to share "in the cost of a system the expense of which may be enhanced for Imperial "purposes."

They suggested that the payments from India should be as much as possible in the form of fixed rates for particular charges, for the obvious purpose of avoiding frequent reopening of accounts, and delays in settling claims. Such sums should be, in the first instance, arrived at by careful computation, but, when once fixed, they should continue without alteration for as many years as may be deemed advisable.

They added, "Your Committee would remark that while there appears to be "every disposition among the heads of other departments to consult the India Office "upon proposed changes which may affect India, yet this has sometimes been "omitted, in consequence of the fact that India may be affected by such changes "having been overlooked; and the India Office, as the controlling authority, has "occasionally acted independently of, or not in accord with, the opinions of the "Government of India in India. In reference to these points your committee suggests "that, although the interests of India must be subordinate, like those of any other "portion of the Empire, to the common interests of the Empire as a whole, and that, "although the best information upon almost every subject connected with India may "be generally obtained in this country, yet that even the appearance of neglect may "be misunderstood and magnified by the Natives of India, some of whom take the "most intense interest in the minutest details of the policy adopted by this country "towards its Indian possessions, and attach, perhaps, exaggerated importance to points "which may pass unobserved by those who have to perform the arduous task of "governing a vast and varied Empire."

The recommendations of the Committee which affect our inquiry may be summarised as follows:—1. That strict impartiality in financial arrangements must be secured for India. 2. That that impartiality will be most effectually secured by watchfulness on the part of the House of Commons. 3. That English estimates ought not to be relieved at the expense of Indian revenues. 4. That India, as a component part of the Empire, must be prepared to share in the cost of a system, the expense of which may be enhanced for Imperial purposes. 5. That the payments by India to England should take the form of fixed rates carefully computed, and that these rates should continue without alteration for a period of years. 6. That care should be taken always to consult the India Office upon proposed changes which may affect India.

We concur in the views of the Committee, and we are mainly guided by them in the opinion which we express.

With reference to their last point, we may mention that with their letter of the 27th February 1895 the Government of India enclosed a list of charges "imposed upon the "Indian revenues in consequence of orders of the War Office issued in all cases "without the concurrence of the Government of India, and in some cases without "that of the Secretary of State for India having been previously obtained." The

* Appendix No. 48. Vol. II., p. 362.

Liberal Treatment.

instances are probably few in which the India Office has not been consulted, but we have no hesitation in saying that there ought to be no such instances. Further, we agree with Lord Elgin's Government in the representation made in the same letter, that no concessions to troops or other alterations which would involve expenditure in India should take effect in India till the 1st April following their adoption.

322. The India Office quote, in the memorandum to which we referred in paragraph 321, in the first place a letter from the Secretary of State (Duke of Argyll) to the War Office, dated September 8th, 1871, in which he complains of the great burden thrown on the Government of India after the abolition of the local European army. "This "additional cost," he said, "should be kept within the limits of real necessity, and "should not be aggravated by the maintenance of a system of recruiting which "appears to be extravagant, and to have no reference to the exigencies of Indian "service."

323.—1. They then point out that short service has imposed a heavy additional charge for transport, and they argue further that short service is not beneficial to India, except when India requires reinforcements of British troops from the reserve, and then only if such reinforcements are supplied free of other charges than that for transport. They further state that under short service, although pensions are diminished, there is an increase of over 200,000*l.* on account of the effective charge for "deferred pay."

They say:—

2. That India is utilized as a reserve for England in a much truer sense than England is for India; that England not merely claims the services of British regiments for the time stationed in India, but that she frequently uses the Native regiments, towards the cost of which she has in no way contributed: that it may, therefore, be reasonably urged that England ought to assist in the maintenance in India of so large a force upon which England does not hesitate to draw;

3. That India not only pays the whole cost of the maintenance of this large force, but that when Indian troops are required for service out of India on Imperial account, she is frequently called on to bear their ordinary charges, even for the time during which she is deprived of their services;

4. That India affords the best training ground for the British Army during peace; that service in India is attractive, and that the liberal treatment of the Indian Government induces both officers and men to enter the Army with the hope of obtaining employment in India. A large and valuable portion of the Reserve, they say, consists of men whose training has been almost entirely acquired at the expense of India.

App. No. 48, Vol. II., p. 365.

5. The India Office Memorandum quotes two despatches of the Government of India, dated respectively 10th August 1883 and 25th March 1890. In the former the Government of India argues that there is no true partnership, or, at any rate, no freedom of contract between England and India; that the Indian authorities have scarcely any voice at all in the adoption of military reforms; and that there is not that identity of interest in measures (such as short service) which is essential in partnership. The despatch of March 25th, 1890, is a very full and elaborate statement of the objection of the Government of India to the War Office claims, and of the principles on which they held that the claims against India should rest. The Memorandum quotes the following passage:—

"The revenues of India have been charged with the cost of many changes in organisation not specially necessary for the efficiency of the Army in this country, and with the cost of troops employed on Imperial service beyond the limits of India. Millions of money have been spent on increasing the Army of India, on armaments and fortifications, to provide for the security of India, not against domestic enemies, or to prevent the incursions of the warlike people of adjoining countries, but to maintain the supremacy of British power in the East. The scope of all these great and costly measures reaches far beyond Indian limits, and the policy which dictates them is an Imperia policy. We claim, therefore, that in the maintenance of the British forces in this country a just and even liberal view should be taken of the charges which should legitimately be made against Indian revenues."

324. Passing to the non-effectiv charges, the India Office state that they have no complaint to make regarding th mitcd of dividing these charges, according to the

extent of service rendered by each pensioner to the British and Indian Governments respectively. Liberal Treatment.

6. In regard, however, to the pensions of officers, they urge that by the abolition of the purchase system, which was in no degree effected in the interest of India, a very heavy system of pension was entailed, in which India is compelled to bear her part, in addition to that for her own service.

325.—7. On the subject of partnership they quote a despatch of the Government of India dated the 10th August 1883:—

> "If the division of expenditure between India and England is to be regulated on a purely arithmetical basis, and is to proceed on the assumption that the two countries are partners, having equal interests in respect of their joint undertaking, the Indian authorities should have an equal voice in respect to the desirability or otherwise of carrying any proposed reform into effect. At present the Indian authorities are so far from having an equal voice in the decision on such matters that it may be said, without exaggeration, that they have scarcely any voice at all. It has rarely, if ever, happened that the Government of India has been consulted before any reforms in the organisation of the British Army have been effected, even although the execution of those reforms may have resulted in considerable burthen being thrown on Indian revenues."
>
> * * * * * *
>
> "The military requirements of England and of India are so different that it is impossible there should be any true partnership in the sense in which we are now using the word. Take the case of short service. . . . The greatest amount of economy and of military strength is to be found in that system which maintains the lowest possible peace establishment, capable of expansion to the highest possible numerical strength in time of war. Hence the adoption of the short service system in England, and generally in most European countries.
>
> "It is evident that the responsible Indian authorities have to approach this question from an entirely different point of view. A reserve of British troops available for service in India would, no doubt, be very useful; but the Indian Government cannot look upon its peace establishment mainly in the light of a school or training ground for the reserve. On the contrary, the first and most important feature in any military organisation suitable to the wants of India is that a relatively high peace establishment should be maintained in order to preserve internal order. We are unwilling to use the common-place argument that India is held by the sword, because, although it is true, we do not consider it is the whole truth; and, moreover, we disagree with many of the conclusions which are frequently drawn from this argument. There can, however, be no doubt that British rule in India rests on force, moral and physical, and, as an inevitable consequence of this condition of things, such a question as that of short service in the Army, with the attendant issue involved in the constitution of a reserve, must be approached, when considering Indian requirements, from a point of view wholly different from that which would be adopted in considering the requirements of England. Under these circumstances, we do not see how any partnership, properly so called, is possible."

8. Lastly, the India Office in their Memorandum point out that the pensions for Indian service are almost entirely spent in England, the revenues of which derive benefit from the income tax levied on their payment, while in many ways the expenditure is advantageous to the country in which it occurs, and the rates are relieved of the necessity of supporting the men, who, but for their pensions, would have to be maintained by their parishes.

326. We have quoted the Memorandum of the India Office at length, in order to give their reasons for asking liberal treatment fully and in their own words. Those reasons may be summarised as follows:—

1. The cost of recruiting is excessive, and short service has increased the cost of transport and entailed a charge for deferred pay. 2. India is used more as a reserve for England than England is for India. 3. India frequently pays the ordinary charges of its own troops used for English purposes. 4. India is a good training ground for the English Army. 5. India provides a large army at great cost to

Liberal Treatment.

maintain British supremacy in the East. 6. The abolition of purchase has increased the pensions of officers. 7. A different organisation of force is needed in England and India; there can therefore be no true partnership between them. 8. The pensions to European officers and soldiers out of Indian revenues are spent in the United Kingdom.

327. Reason 1. We have shown that short service, although it increases the charge of transport, and though it has been accompanied by an increase of pay, will not ultimately increase the burthen on the Indian taxpayer. We have also given our reasons for thinking that the charge against the Government of India for recruiting is not excessive. We do not, therefore, consider that Reason 1 is made good.

328. Reasons 2 and 3 refer, we presume, to the employment of Indian troops on Imperial service out of India. Agreeing, as we do, with the opinion of the Committee of the House of Commons quoted above, that English estimates ought not to be relieved at the expense of Indian revenues, we admit within reasonable limits the force of these reasons, and we have endeavoured to meet them by suggesting a definition of objects and services outside of India in which India may be held to have an interest, and the constitution of a body which may advise the Government on such objects and services.

329. Reason No. 4 states that India is a good training ground for the English Army. This is a military question, but we notice that it is not a reason universally accepted, for so high an authority as Lord Wolseley questions it. We presume the India Office to mean that the small wars of India afford a good training for the Army as a whole. They would hardly argue that mere garrison duty in India affords any special advantages over service at home or in a Colony; indeed, some high military authorities do not consider that ordinary service in India improves the soldier. On the other hand, it might be argued that the various wars and expeditions conducted by the Imperial Government afford a good training for the Army as a whole. We do not think that this reason affords a sufficient ground for transferring a part of the charge of the Indian Army from the Indian to the British taxpayer.

330. We differ from the Indian Government (Reason 6) in thinking that the increase of pensions which followed the abolition of purchase in the Imperial army, is an Indian grievance. Purchase was abolished because it was decided to be bad, and its abolition was a benefit to the whole army, whether in England or in India. Its abolition placed the English army on the same footing as the Indian Native army. A liberal pension system existed for officers in the Indian army, and a liberal pension system was established for officers in the English army after the abolition of purchase. In both cases a pension system was, doubtless, found necessary to secure the efficiency of the army.

331. Reason No. 8 urges that the pensions granted to European officers and soldiers are for the most part laid out at home, and that the United Kingdom obtains in consequence an advantage from the expenditure of that amount of Indian revenue here. There is some force in the argument. We have said that owing to changes in the method of paying the War Office claims it is difficult to make an accurate estimate of the Indian share of pensions granted to officers and men of the British Army.

But these pensions are part of the consideration paid for the service which the soldier has already rendered. The Indian Government employs the soldier for a certain remuneration present and deferred. The deferred pay or pension is part of the contract, and when the soldier has performed his stipulated service he is entitled to the pension which formed part of the contract with him. He is at liberty to spend that pension when and how he pleases, and India is not entitled to claim that it ought to be spent in India.

332. Lastly, in Reasons 5 and 7, the India Office quote letters from the Government of India which contend (1) that India provides a large army to maintain British supremacy in the East, and (2) that there is, and can be, no partnership in the true sense of the word between the two Governments.

In paragraph 323 we have quoted from the India Office memorandum an extract from the letter from the Government of India of 1890 in which their view is stated; and the case, as put in that despatch, was substantially re-asserted in evidence before us by Sir E. Collen, on behalf of the Government of India. It is necessary to add, to make the position clear, that the Secretary of State has not always entirely supported

the contention of the Government of India. Thus Lord Kimberley wrote in 1884:— Liberal Treatment.
" It having been decided after the assumption of the direct government of India by
" Her Majesty, that a local European force should no longer be maintained, and that Despatch to India, Sept. 25. 1884.
" the European army in India should thenceforward be a portion of the general forces
" of the Crown, it follows, as a necessary consequence, that the British troops in India
" shall, in respect of the period of their service there, be entitled to equal privileges of
" a general character with those employed elsewhere, whether in regard to pay or
" pension. . . . Any decisions of Her Majesty's Government increasing the Despatch to India, No. 68, June 7, 1894. Appendix, No. 45, Vol. II., p. 282.
" pecuniary advantages of the Army must be considered, not as having reference to the
" wants of England alone, but to the interests of the military defence of the whole
" empire, and I am unable to see on what ground India, which requires about one-third
" of the entire British army, can complain of being required to pay her due proportion
" of the cost." And Sir Henry Fowler wrote in 1894, " I admit that, speaking generally,
" and with a reservation in particular cases, the pay and organisation of the Army
" must be made applicable to India as to the Colonies."

In reply, the Government of India wrote, "We feel that it is useless for us to Letter No 4 Feb. 27 1895. *Ibid.*
" combat the alterations in the establishments, rates of pay and privileges sanctioned
" by the War Office for the British army."

333. Upon these points we may, perhaps, state briefly the principles which should, we think, govern the contribution.

For the maintenance of peace within India, and for the defence of its frontiers, an army, drawn from the United Kingdom, must always be encamped there, and, as a European force cannot remain efficient in India beyond a limited number of years, there must be a continual withdrawal of time-expired troops on one hand, and a continual supply of fresh troops on the other.

If India and the United Kingdom were separate political entities, the Indian Government would determine the quantity and the character of the troops it required, and for what time; and upon that basis the United Kingdom, if willing to provide the troops, would be entitled to prescribe the amount of payment for the troops so rendered.

For the moment we assume that it is neither convenient nor inconvenient to the United Kingdom to supply the troops required, and that the character of those serving in India is identical with the character of those required at home. The Home Government is willing to collect, train, and furnish the men if paid the proper cost of them, receiving them back also when the term of Indian service is expired.

334. The first objection made to this analysis may be that the United Kingdom and India are not such independent political entities as contemplated, and that no such view is ever entertained of the relation between the United Kingdom and any Colony This last allegation is true, but, upon the best consideration we can give to it, it seems to us necessary that in the settlement we are endeavouring to effect the United Kingdom and India should be strictly separated in our calculations. The fullest justice is done to both if each is conceived independent of the other, with Governments fighting out their bargains on strict commercial principles. For the moment we are assuming that the European force in India is necessary for its internal and external peace, and we put ourselves in the position of an Indian Government ready to take this force from any military power that would supply it, and bargaining from that standpoint.

335. The next objection that may be made is that the character of the troops wanted for service in India is not so high as the character of those required in Europe, and if India had to bargain for itself, it would be content with troops less highly organised, and with a much less costly armament. This is a military question. On the whole, we are persuaded that it is to the interest of India to receive troops up to the highest standard of European efficiency, some compensation being found for the additional cost involved in the maintenance of this standard in a diminution of the quantity of the force required for Indian service. In this connection attention must, however, be paid to the allegation that the term of service in India is less than what a consideration of the interests of India would prescribe, and that soldiers are sent home a year too soon, in order to meet the exigencies of the conditions of recruiting in England. This would indirectly affect the rate of the capitation grant, which, we have recommended, should not at present be disturbed. We have, however, pointed out that short service will eventually relieve, not increase, the charge on the Indian taxpayer; but that result is not yet attained. In the meantime we recommend,

Liberal Treatment.

as a measure justifiable in the circumstances, that half the cost of the transport of troops to and from India should be defrayed by the Imperial Government.

336. Another argument requiring serious attention is found in the assertion that the military needs of India are much increased by the fact of its political connection with the United Kingdom. It is alleged that whatever India may gain in the security of internal peace through British domination, it is more exposed to external attack through jealousy of Great Britain, and that the United Kingdom should therefore bear some proportion of the increased cost of defence necessary to repel the increase of danger. We are not persuaded of the accuracy of the statements upon which this plea is based. If India could be organised under some Power, reviving in an improved form the authority of the Great Mogul, it would not, in our judgment, enjoy increased immunity from attack; and if any other outside Power took our place as over-Lords, we know no reason why such a Power should be regarded with less jealousy than ourselves. It is fair to point out that under our rule India is open to the commerce of all nations upon the same terms, and we cannot be sure that a change of circumstances might not produce discriminating tariffs very provocative of foreign jealousy. We are unable, therefore, to accept Lord Lansdowne's view that, if India were the dependency of some other Power than Great Britain, she would not have the same external liabilities that she might have now.

Qq. 16,023-8.

Q. 16,005, *et seq.*

337. There remains yet another argument to be considered. It is said that India is a convenience to us in receiving and keeping in service a force we could not dispense with if India was not ready to receive it, or, as it is otherwise stated, if India ceased to be a British Dependency, we could not disband the whole of the forces that would in such a case be called home—some portion of which would still be required to furnish our military arm.

We take this argument into consideration. The Imperial garrison in India may be reckoned in round figures as constituting one-third of the Imperial Army, the remaining two-thirds being employed at home or in the Colonies. It must, however, be remembered that the garrison in India is required for India, and, except to the limited extent which we describe hereafter, is not available for Imperial service.

If, therefore, that portion of the British Army now stationed in India were disbanded, it would be but small loss of effective strength to the Home Government as far as men with the Colours are concerned. What, then, would be the effect on the Imperial Army of disbanding that part of the force which is detached for service in India? It might be thought that the Reserve would be weakened, because there would be no soldiers from India passing into it. But the true effect of disbanding the Indian portion of the Imperial Army would not be so simple. Great importance is attached to the Reserve as a factor in our military strength. It is now about 80,000 strong, and we will assume that a Reserve of at least that strength is to be maintained. It would seem at first sight that, if the Army were reduced by the large number required for India, the Reserve would be reduced in proportion, but this is not so, for the demand for men of uniformly eight years service having ceased, the alternative periods of service in force in the Guards could be substituted, viz., either three years with the Colours and nine in the Reserve, or seven with the Colours and five in the Reserve. Under such a system a Reserve would be created fully equal to the present numbers, from an army numerically smaller than that now maintained at home; and, moreover, a somewhat smaller number of recruits than is now required for the combined Home and Indian Army would be needed.

If then that part of the Imperial Army which is stationed in India were disbanded, it does not necessarily follow that the Army at home must be increased in order to provide the number at present thought sufficient for service at Home and in the Colonies, or to maintain the number at present thought sufficient for the Reserve.

338. But the Home Government has derived and does derive great benefit from the existence of a large effective force in India. The Empire has great and varied interests in the Eastern seas, and although military authorities do not consider that the permanent garrison of India should be reduced below the present number, yet it is possible for India, in time of peace, to lend troops temporarily for Imperial purposes. India has done so repeatedly. She has detached a part of her garrison to aid the British Arms in China, in New Zealand, in Abyssinia, in Egypt, and at the Cape. She has lent them for expeditions in which she had a direct and substantial interest, and for expeditions in which she had no such interest. She thus, in fact, provides in the East a reserve force, which, when India is quiet, can promptly and effectively,

though only temporarily, aid British policy in the East, diminishing to that extent the number of men which, in the absence of such assistance, the Home Government must detach to distant parts from the garrison kept at Home or in the Colonies. It appears to us that India renders, in this respect, a real service to the United Kingdom, and that in respect of it she is entitled to liberal treatment. On the other hand, it may be argued that the army in the United Kingdom reciprocally maintains a reserve of strength available to India in case of extreme need. This is true, but, if we are to judge from what has happened in the past, the circumstances in which India calls upon the United Kingdom for special aid are not of the same kind nor likely to recur so frequently as the calls of the United Kingdom on India. Liberal Treatment.

339. We find it difficult to base on this consideration any specific proposal for the re-apportionment of charges. We have done this in many important cases which have come before us, such as the cost of the India office and of Aden. In other cases we have come to the conclusion that no immediate re-adjustment of apportionment is necessary. We have shown reason for holding that the capitation rate cannot at this time be reckoned an excessive charge for the services which it covers, and we have satisfied ourselves that the payment of India for the cost of ships of war is a moderate contribution for Navy services. We have examined each head of charge, with the object of arriving at a conclusion equitable to India on the understanding that India is to pay, and can pay, a fair price for the services and material supplied to her by the United Kingdom to meet her needs. Further, we have considered certain pleas advanced by the Government of India in favour of a deduction from that fair price, and we have accorded to them such weight as seemed to us due. Lastly, we have urged that before measures involving an increase of military charge are adopted by the Home Government, the India Office, and through the India Office the Government of India, should invariably be consulted; and we have suggested that when a question arises as to the incidence of the cost of troops lent from India to co-operate in military operations beyond her frontiers, such question should be considered by a committee on which India should be represented, and that controversies between the two Governments as to details of military charge should be settled by arbitration. In all these cases we have found it possible to offer recommendations for the practical solution of the questions submitted to us. It is a more difficult matter to express in a practical shape the force of the considerations which we have noticed above, or to draw any definite line between the cost proper of the government of such a dependency, and such other cost as may be more justly attributed to the general policy of the Power of which it is a dependency. If, on the one hand, India imposes a certain strain on the Imperial resources in the supply of services for which she properly pays, and is able to pay, on the other hand she renders certain services, and affords certain advantages to the Imperial Government which should not be disregarded, though they are not so easily estimated at a money value. On this subject we consider that the exceptional position of India as to military charges should always be kept in view, and it will undoubtedly be remembered at the revision of the capitation rate, when the contention of the War Office that India does not pay the full cost of the recruit will also be examined.

CHAPTER IV.

SUMMARY OF THE REPORT.

340. It remains to us now to bring together and summarise the conclusions at which we have arrived in the course of our remarks under the heads of I., Financial machinery; II., Progress of expenditure; III., Apportionment of charge between the United Kingdom and India.

I. Financial Machinery.

Paragraphs 50 to 70. System of accounts, paragraphs 50. 51.

341. We consider that the financial machinery of the Indian Empire is well organized, and that its action is effectively controlled. The district treasury is the unit of financial administration. The revenue received by each treasury is applied as far as necessary, and economically, in meeting the local expenditure; but the accounts of moneys received into or issued from each treasury are promptly consolidated in each province and reported to the Central Treasury at Calcutta. Thus the Financial Member of Council learns early in the month, and from preliminary reports, the total sums received and issued throughout the empire up to the close of the preceding month, and by the close of the month he receives detailed information of his income and expenditure to the same date. He is thus enabled to keep his finger on the financial pulse. In an immense territory, such as that of the Indian Empire, it is essential to financial order that a careful and intelligent watch should be kept over the progress of expenditure in the several provinces. Neglect of this precaution led to the grave errors of estimate during the Afghan war. Since that time the system of report has been much improved, and we are confident that the information now rendered automatically to the Central Treasury enables the Financial Member of Council to keep an effective watch over his expenditure. If error should now occur, the responsibility for it would be due to want of watchfulness at the Central Treasury.

English and Indian budgets, paragraphs 52, 53.

We have noted the distinction between the English and the Indian systems of account. The English system is based not upon the revenue actually received, and the expenditure actually defrayed, but upon the amount of revenue paid to the Central Exchequer account, and upon imprests made from that account to the spending departments; the Indian system is based upon the revenue actually received, and on the actual expenditure. The English method has the advantage of promptitude, as the balanced account of income and expenditure can be made up daily, and is made up weekly for the Chancellor of the Exchequer. The process of ascertaining actual receipt and expenditure under the Indian method is slower, but it is adapted to the financial system in force and to the circumstances of India, and meets all necessary demands.

Control of revenue, paragraphs 55 and 70.

We have noted also that in India the Revenue authorities are not concentrated in Calcutta, as the English Revenue authorities are concentrated in London, and that, in consequence, the Financial Member of Council cannot obtain at headquarters expert assistance on revenue questions in the same degree as the Chancellor of the Exchequer. Financial Members of Council are satisfied with the information which is at their command, and the point is only, therefore, of interest when the relative powers of the Indian Finance Minister and the Chancellor of the Exchequer are being compared. We gather that the Imperial Departments and the Provincial Governments responsible for the collection of revenue are not, as is the case at home, under instructions to furnish to the Financial Member of Council explanatory returns at stated intervals of the progress of the revenue. Such returns are useful, but the Financial Member is the best judge of his own requirements.

The financial year, paragraphs 54 and 69.

The Indian Budget is opened, under present arrangements, before the close of the financial year. The Financial Member is in consequence obliged to present a revised estimate of the income and expenditure. This revised estimate represents about 10 months of actual, and two months of anticipated, results. It is followed, after a comparatively short interval, by a final account of the actual income and expenditure of the year, varying often considerably from the revised estimate. Three statements are, therefore, laid before the public, the Budget estimate, the revised estimate, and the final account. Statements intended for general instruction should be as few and simple as possible, and it would be advisable if possible to dispense with the revised estimate. For that purpose, we think it worthy of consideration whether the financial year should not close on the 31st December. The accounts of actual income and expenditure would,

in that case, be practically complete by the time that the Budget is opened, and there would be no need for the revise. If it be objected that the Budget ought to be sanctioned before the beginning of the financial year, we may reply that by far the larger part of the Budget in England is voted after the financial year has commenced, and we should think it not impossible to make such arrangements as would obviate financial inconvenience from the change. We have not made a recommendation, we have thrown out a suggestion.

Financial Control.

342. Passing to the question of financial control we have directed our attention to five points:— Paragraphs 56 to 57.

i. The power of the Financial Member of Council as it is in theory;
ii. As it is in practice;
iii. The relations of the Financial Member to other departments and to the Executive Council of the Viceroy;
iv. His relations to the Viceroy;
v. His relations to the Secretary of State in Council.

(i.) On the first point, it is shown, we think, that the controlling power of the Financial Member of Council is theoretically complete. Theoretical power of the Financial Member. Paragraphs 57 and 62. His practical powers, paragraphs 58 and 63.

(ii.) There is some difference of opinion as to his practical power. Sir David Barbour and Sir Auckland Colvin think that in recent years that power has somewhat diminished. Lord Cromer, who left India before 1885, does not express an opinion on this point. He considers that the Finance Department cannot command the traditional influence which attaches to the Treasury in England. Much, no doubt in this, as in all similar cases, depends upon the personality of the Minister. There cannot, however, be a doubt that the fall in exchange and increased military demands have added largely in recent years to the expenditure of India; but it must be remembered that the army is far more costly than formerly in other countries besides India. The discussion is somewhat academic, as Sir David Barbour and Sir Auckland Colvin have no practical remedy to suggest, but due attention should be given to the opinion which they have expressed, for there is general agreement as to the difficulties and risks which attend increase of taxation in India.

(iii.) Sir David Barbour and Sir Auckland Colvin wish to see more attention given by the Members of Council to general financial considerations, but we have accepted the evidence of Lord Northbrook, Lord Ripon, Lord Lansdowne, and Lord Cromer, that Members of Council fully recognise their collective responsibility on financial questions. His relation to Members of Council. Paragraphs 59, 64, and 65.

(iv.) The power of the Viceroy is, in our opinion, as in the opinion of witnesses who gave evidence on the point, the predominant factor in Indian administration. If he should not give sufficient weight to financial considerations, a check can only be found in the Secretary of State at home. His relation to the Viceroy. Paragraphs 60 and 66.

(v.) We think that the Secretary of State is the "ally" of the Financial Member of Council. It is, therefore, desirable, that he should learn unreservedly the opinion of the Financial Member. Lord Cromer suggests that the Financial Member (in common with other Members of Council) should be at liberty, if he wishes it, to state his opinion in a confidential memorandum, which should not be published without his consent, but should be forwarded through the Viceroy to the Secretary of State. We think that the suggestion deserves favourable consideration. His relation to the Secretary of State. Paragraphs 61 and 67.

343. In the course of the evidence tendered to us, reference was made to the fact that two out of the seven members who, including the Commander-in-Chief, constitute the Council of the Governor-General, are military men, and it was contended by Sir David Barbour and Sir Auckland Colvin that the military element had in consequence somewhat disproportionate weight in the Council. It was argued on the other side that the Military Member of Council is rather a check on, than an ally of the Commander-in-Chief. We were informed that the late Lord Lytton, when Governor-General, thought that the Commander-in-Chief should not be a Member of Council and that Sir Ashley Eden's Commission on army organisation in India made a recommendation to that effect. Lord Northbrook, Lord Lansdowne, and Lord Cromer were opposed to change. We have noted the point, but expressed no opinion upon it, as we do not consider that it falls within our order of reference. Military representation in the Council. Paragraph 68.

Audit.

Departmental and test audits. Paragraphs 87 and 88.

344. Public accounts in India are subjected to a detailed audit by departmental officers, checked by a test audit, which the Comptroller and Auditor-General applies from headquarters. It appears to us that the departmental audit is well organised and effective. It accompanies, or follows closely, the expenditure to which it applies, and the Comptroller and Auditor-General is able within two months or so from the expiry of each month to lay before the Financial Member of Council an audited account of the expenditure of all India for the expired portion of the financial year up to that date. The promptitude with which the audit is conducted and consolidated into one account in the whole of India is in our opinion highly commendable. The departmental auditors are not independent of the Executive Government in the sense that the officers of the Comptroller and Auditor-General at home are independent. We have not, however, laid stress upon this point, because we think that the object of an independent audit is attained by the test audit which the Comptroller and Auditor-General applies.

We attach a great value to this test audit, if applied upon a sufficient scale. We are informed that, as at present applied, it covers about one-twelfth of a year's expenditure. The Comptroller and Auditor-General is responsible for satisfying himself, by means of it, that the departmental audit is searching and effective, that satisfactory explanations of apparent irregularities only are accepted, and that irregularities not satisfactorily explained are always reported. Full discretion, subject to that understanding, should be left to the Comptroller and Auditor-General as to the extent of the test which he may consider it desirable to apply.

We think that the rule generally in force for the record of the objections and queries which have been raised by auditing officers should be made uniform in all departments. This record should be of service to the officers employed by the Comptroller and Auditor-General on the test audit, and to the Comptroller and Auditor-Generel himself, as showing the manner in which the departmental auditors discharge their duty.

The independence of the Comptroller and Auditor-General. Paragraph 89.

345. Opinion with regard to the terms of appointment and duties of the Comptroller and Auditor-General is divided. Some of us think that the Comptroller and Auditor-General of India should, as far as circumstances permit, hold his office on terms similar to those which Parliament has enacted for the Comptroller and Auditor-General of the United Kingdom; that he should be appointed by the Secretary of State in Council; that his tenure should be similar to that of the Judges of the Indian High Courts, and his rank and salary equivalent to those of a Secretary of Government; that, whereas he now discharges many executive functions, he should be relieved of them, and that they, together with the staff employed upon them, should be transferred to the Finance Department. His own staff would then consist of the officers now employed in the examination and record of the accounts and reports received from the auditors of the different departments in the provinces, and of the officers whom he employs upon his test audit. It appears that the Indian authorities are, on the whole, opposed to the change, and that their opposition is based in the main upon the increase of expenditure which they anticipate would ensue. Those of us who advocate the change think that that increase is over-estimated; that it might be necessary to appoint a new assistant secretary in the Finance Department to undertake the executive duties of the Comptroller and Auditor-General, and that increase of pay should be granted to the Comptroller and Auditor-General to mark the importance of his independent office; but that his audit duties would remain the same, and his present staff should suffice for them. If it is held that the change would be followed by an increase of the test audit, that increase, they consider, is as necessary now as it would be under the change, and increase for that purpose ought not, therefore, to be attributed to the change. Indian authorities appear to be satisfied with the extent of the present test, and, if experience supports that view, there would be no need for an increase in the number of officers.

Others of us hold that the evidence does not justify the proposed change, which would certainly increase expenditure, and, in their opinion, would secure no compensating advantages. They consider that, whereas the circumstances in England and in India are widely different, the arguments in favour of the proposed system are based solely on the fact that it has answered well in England. They point out that similar proposals have been rejected by two Secretaries of State as unnecessary. Further, they are of opinion that serious administrative difficulties are involved, which have

not been considered; and especially that it is very undesirable to give to the people of India the impression that their Government requires to be checked in its control over expenditure by an independent authority set up in India.

We have therefore made no recommendation on this subject.

Appropriation report. Paragraph 90.

346. We have recommended that the appropriation accounts of Indian expenditure, and the appropriation reports of the Comptroller and Auditor-General thereon, should follow the form of the appropriation reports which the Comptroller and Auditor-General of the United Kingdom presents with his certificate and comments to the House of Commons. It is a form approved by the House of Commons, and found convenient by the Committee of Public Accounts in their examination of expenditure under the various votes.

Examination at home of the audited accounts of the Indian Government. Paragraph 91.

347. We have recommended that the appropriation accounts of the Indian Government, with the reports of the Comptroller and Auditor-General upon them, should be forwarded by the Government of India to the Secretary of State, and should be referred by him to a standing committee for examination. We think that two members of this committee should be unconnected with the India Office, and that one of them should be the Comptroller and Auditor-General of the United Kingdom. The report of this committee, together with the appropriation accounts, the report of the Comptroller, and Auditor-General, and the despatch of the Indian Government, which covers them, should be laid before Parliament, and should be accompanied by a minute of the Secretary of State in Council, dealing with questions raised in the report of the home committee.

Audit of the Home Account of the Indian Government. Paragraphs 92, 93, and 94.

348. We think that the Auditor of the Home Accounts of the Indian Government should exercise a free discretion in commenting on the expenditure submitted to his audit. He has no power to disallow expenditure. The Secretary of State is the ultimate authority, and he is free to entertain, or not, the criticisms of the auditor.

We have recommended that the Home Accounts, together with the report of the home auditor upon them, accompanied with a minute of the Secretary of State in Council dealing with the report, should be referred to the committee contemplated in paragraph 91, and that the report of the committee, together with the papers referred to it, should be laid before Parliament.

II. Progress of Expenditure.

Paragraphs 96, 97, 98, and 101.

349. In the year 1861–2 the taxation imposed in consequence of the Mutiny was in full course of collection, and in that year equilibrium between income and expenditure was practically restored; 1861–2 is therefore a convenient point of departure in measuring the progress of Indian finance. Our review has extended over 34 years, from 1861–2 to 1895–6; famine disturbed the finance of the two subsequent years. The review divides itself into two periods. The first period extends over 23 years, from 1861–2 to 1884–5. It includes the Afghan war and years of famine; yet it was on the whole a period of peace, of economy, of financial prosperity, and it was marked by reduction of taxation. The second period extends over 11 years, from 1884–5 to 1895–6. It was a period of falling exchange and of increased military expenditure. It was marked by increase of taxation.

Paragraphs 105, 108, and 109.

We have endeavoured in the first instance to ascertain the normal growth of the tax revenue in the two periods, and for that purpose we excluded the effect of increase or diminution of taxation. The records did not enable us to ascertain exact results of the changes in taxation. Our figures therefore are only approximate, and indicate rather than record the true growth of the tax revenue.

The result is given in the following table:—

—	Normal Growth of Tax Revenue.	Yearly Growth.	Growth of Expenditure.
	Rx.		Rx.
First period - -	8,100,000	1·22	7,050,000
Second period - -	5,800,000	1·27	12,400,000
Whole period - -	13,900,000	1·49	19,450,000

The military expenditure was not reduced to its normal level until 1862–3. The real increase of expenditure during the two periods was therefore greater than the

foregoing figures indicate. This has been shown when we reviewed the military expenditure. The true growth of the tax revenue, according to our estimate, amounted to about 50 per cent.*

It is impossible to ascertain with accuracy the population of British India in 1861-2. It appears to have been between 170,000,000 and 180,000,000, and the increase between that date and 1895-6 may perhaps be taken approximately at about 30 per cent.

We are satisfied, without relying unduly on the exact accuracy of our estimate, that the produce of taxation between 1861-2 and 1895-6, increased in a ratio considerably greater than the growth of population.

Paragraphs 98, 102, 105, 108, and 109.

We have pointed out that the Mutiny entailed a great increase of taxation, which we have estimated at Rx. 5,800,000. During the first period the larger part of that increase was remitted. The income tax was repealed, the salt duty was reduced practically to the rate at which it stood before the Mutiny. At the close of the period there were no Customs duties, except on the export of rice and on the import of salt and alcohol. In the second period we have stated generally that the taxation remitted in the first period was re-imposed. We think, again speaking generally, that at the end of the first period taxation stood at the rates which prevailed before the Mutiny; that at the end of the second period it stood at the rates which prevailed at the close of the Mutiny.

It will be noticed that the growth of expenditure over the whole period outstripped the normal growth of the tax revenue by Rx. 5,550,000, but the increased cost of exchange included in the expenditure amounted to no less a sum than Rx. 13,800,000. It may be said, therefore, that, but for the heavy charge entailed upon India by the fall in exchange, the normal growth of the tax revenue was not only sufficient to meet the largely increased demands of military and other services, but would have provided a large balance available for reduction of taxation.

Debt of India.

Paragraphs 117 and 121.

350. We have shown that the debt of India amounted in 1842 to Rx. 33,500,000; that it amounted at the outbreak of the Mutiny to Rx. 51,300,000,† and that at the close of the Mutiny it had risen, after making adjustments, to Rx. 96,000,000, an increase of between 180 and 190 per cent. We have further shown that in the period under review, that is since India came under the direct rule of your Majesty, this old or unproductive debt has been reduced from Rx. 96,000,000 to Rx. 72,700,000, a diminution of nearly 25 per cent., although famine relief during that period cost Rx. 17,300,000, and wars Rx. 22,800,000.

Paragraph 122.

We have calculated that the gross annual charge of the old or unproductive debt has in the interval between 1861-2 and 1896-7 been reduced by about 50 per cent., exclusive of exchange, and by about 16 per cent. when the cost of exchange is added.‡ But the Government of India earns interest on securities which it holds and on part of its cash balances. These earnings may fairly be set against the charge of the debt in calculating the net charge of that debt to the taxpayer. In that case the charge of the debt to the taxpayer, including the cost of exchange, has been reduced in the interval between 1861-2 and 1896-7 by 32 per cent.

Paragraphs 65 and 129.

Sir David Barbour pleaded before us for steadiness in Indian finance, since in India periods of depression follow periods of prosperity. We understood him to mean that, in time of prosperity, surplus revenue should not be given away in full, but that a safe reserve should be maintained. We concur with Sir David, but we have called attention to the fact that a fair reserve had been maintained, for it has been possible by means of it, and in spite of war and famine expenditure, to pay off in 34 years 25 per cent. of the old or unproductive debt. Further, since 1881, provision against famine has been made at an average annual outlay of Rx. 1,100,000. This provision, except in actual times of famine, is a reserve under another name. It is not, however, a permanent reserve. We have pointed out that a large reduction has been effected

Paragraph 64.

* The net tax revenue of India in 1861-2 was:—

	Rx. 33,457,000
In 1895-6	53,994,000
	20,537,000

an increase of 61 per cent., independent of the adjustment necessary to correct the effect of changes in taxation.

† This sum included a certain amount of debt incurred for public works.

‡ Exchange at 1*s.* 4*d.* for the rupee would effect a saving of 10 per cent. upon the cost of exchange.

in the charge of the debt, and we suggest that the provision against famine should be converted into a permanent reserve, somewhat resembling the new sinking fund at home, and that it might be augmented by some part of the reduction which has been effected in the charge of the debt, so far as is consistent with sound finance. We may mention that the debt incurred in consequence of the Mutiny amounted to more than Rx. 45,000,000. In 35 years from the 30th April 1862, only Rx. 23,000,000 of this debt had been paid. At the rate which has hitherto prevailed, it would require nearly 70 years to pay off the Mutiny debt.

We have stated it as accepted policy that the Indian Government does not borrow in England for works or current expenditure in India, except under abnormal circumstances. It is, however, an important question how far money in India is derived from Indian sources. Mr. Jacob informed us that out of Rx. 103,000,000 borrowed in India Rx. 25,000,000 was actually held at home, that Rx. 48,000,000 was held by Europeans in India, and that only Rx. 30,000,000 was held by Natives of India. If money borrowed in India is to any extent found in England, the advantages of borrowing in India are proportionately neutralised. The Government of India estimate that the market of India will not provide more than Rx. 5,000,000 in a year. Paragraph 116.

Collection of Revenue.

351. The cost of collecting the revenue, as shown in the accounts, is very heavy, but we have stated (1) that the real charge of collection, tested in its relation to the revenue collected, is not so great as the figures given in the accounts would indicate, (2) that the percentage is greatest in the case of Land Revenue, but that considerable deduction must be made from that charge, as shown in the accounts, in order to arrive approximately at a correct computation of the charge, and (3) that the cost of collecting taxes, properly so-called in India, is not much greater than in the United Kingdom. We have also come to the conclusion that the increase in the charge of collecting taxes during the period in which reliance can be placed upon the figures, viz., between 1875–6 and 1895–6, is not so large as might have been expected. Collection of revenue. Paragraphs 130 to 138. Paragraph 138.

The Cost of Civil Administration.

352. We examined next the charges of civil administration in India—that is the internal government of the country. Changes in the method of stating accounts did not enable us to carry back our analysis in detail of the charges beyond 1875–6. Paragraphs 139 to 144.

We have noted that in the interval of 20 years between 1875–6 and 1895–6 the cost of "general administration," that is of the administering departments, including the office of the Secretary of State, had risen considerably. The charge of the India Office practically showed no increase, nor did there appear to have been an increase in rates of pay in India, apart from the compensation allowance granted in consequence of the fall in exchange. We have come to the conclusion that the cost of the establishments which constitute the "general administration" in 1895 is not excessive as compared with 1875, and that their growth also has not been excessive as compared with expenditure in other countries.

We have pointed out that the budget of Law and Justice is practically self-supporting; that is, the fees and other receipts levied in the courts, whether in cash or by stamps, cover practically the whole cost of the courts, including non-effective and incidental expenses. Law and justice, therefore, impose no charge upon the general taxpayer. Paragraph 145.

The whole net expenditure of the State upon Education from public funds, State or municipal, amounted in 1895 to about Rx. 1,500,000. It cannot be said that that sum is a lavish or excessive grant for the education of 230,000,000 people. It is indeed probable that the Government would, apart from financial exigencies, be glad to devote considerably larger sums to this important object. Paragraph 150.

We have suggested in the Ecclesiastical chapter that all chaplains employed on military service should be paid from army grants. Paragraph 151.

Reviewing the progress of the General Administration as a whole, eliminating the cost of Upper Burma (a new acquisition), and transferring the chapters of Marine and Political service to the head of Defence and Foreign Affairs, we have found that the true net cost of the establishments which conduct the internal administration of India increased by about Rx. 1,550,000, or 25 per cent., the population increasing during that period at the rate of rather more than 20 per cent. We do not think that the Government of India can be fairly charged with extravagance upon this important division of their duties. Paragraph 156.

We have suggested that a note should be added in the finance accounts to the statement of expenditure on stationery and printing, showing the value of stores supplied during the year to each department. Paragraph 163.

Paragraphs 165 to 167. Passing to non-effective civil expenditure, we have expressed our opinion that the Indian scale of furlough, or leave pay, is not extravagant when compared with allowances of the same kind in the Imperial Diplomatic and Consular service and in Ceylon.

Paragraphs 168 to 176. We dealt next with the charge of civil pensions, excluding in the first instance the cost of exchange.

We have shown from an analysis made for us by the late Mr. Jacob that there was an increase upon the civil pension account of Rx. 730,000 between 1875 and 1893, or 64 per cent. in 17 years.

We divided the charge into two heads—(1) pensions to Native civil officers, and pensions to European officers other than covenanted civil servants, and (2) pensions to covenanted civil servants, their families, and to medical officers.

We have shown that out of the total increase of Rx. 730,000, Rx. 446,000 arose upon the pensions of Native civil officers, and Rx. 61,000 upon the pensions of European officers other than covenanted civil servants; but we have pointed out the very large increase of Rx. 112,000 which has occurred in the pensions of the "Class of uncovenanted officer," an increase partly compensated by diminution under other heads.

There is an increase of Rx. 223,000 upon the chapter of pensions to covenanted civil servants and their families, and to medical officers. These pensions were formerly charged on funds maintained by the officers themselves, with some assistance from the Government. The Government took over these funds and paid them into their cash balances, applying them to the general purposes of the State. There is, therefore, reason for the plea, that, if credit were given for the interest of the funds thus taken over by the Government, and also for deductions which are made from the salaries of the covenanted civil servants as a contribution towards their pensions, the true increase of the charge between 1875 and 1893 would not be large.

Paragraphs 177 and 181. We have suggested that the future maximum cost and the normal cost of the pensions granted to uncovenanted civil servants and to Native civil officers should be calculated under actuarial advice, and that the normal proportion under existing regulations of non-effective to effective pay should be estimated, that it should be ascertained, also upon actuarial advice, whether the pensions of the covenanted civil servants have attained their normal rate, and what is the present, and what will be the future, proportion between effective and non-effective pay, and also at what date the pensions to families of civil servants will attain their maximum and when the Government contribution to these pensions will be reduced to Rx. 35,000 a year. We laid special stress on the necessity of watching the proportion which the cost of non-effective bears to effective service throughout the service, and we have advised that an account should be drawn up yearly showing on one side the actual charge of pensions paid, to covenanted civil servants, their families and to medical officers, and on the other the income which would have been received if the several funds formerly applicable to these pensions, but taken over by the Government, had been maintained, and also the amount of the contribution made by covenanted civil servants towards their pensions.

Paragraphs 178 and 179. Lastly, we have pointed out the heaviness of the burthen cast on the Indian taxpayer by the fall of exchange in respect of Indian civil pensions payable in England. While, however, we have considered it our duty to call attention to these points, and urged that the Government of India should ascertain and understand the financial effect of the pension regulations, we have expressed no opinion adverse to the present scale, recognising that laborious and responsible service in a tropical climate should entitle a man to a substantial pension in reasonable time. No revision of the pension regulations would, in fact, be justifiable except after a full review of the financial working of the general regulations and proof that the burthen cast by them on the taxpayer exceeds the necessity of the case.

Commercial Services.

353. We came next to branches of business undertaken by the State, and earning revenue, viz., the Post Office, the Telegraphs, Irrigation Works, and Railways.

The Post Office. Paragraphs 183 to 185. It has not been the policy to regard the Post Office as a source of revenue. The Post Office, nevertheless, earned a surplus in 1895–6 of Rx. 70,000 and in 1897–8 of Rx. 150,000. If non-effective service and incidental charges, not now included in Post Office expenditure, were included, there would still, we believe, remain a small surplus. The department is charged with the growing business of the Post Office Savings Banks. The cost of managing the banks is included in Post Office expenditure, but the department is not credited with any part of the profit made on the investment of the moneys deposited in the banks. We think that the Savings Bank branch should be debited with all its expenses and credited with all its earnings.

The Telegraph Account has shown a surplus since 1888. It amounts now to more than Rx. 200,000, a sum which would leave a considerable margin, after adding the non-effective charge of the service to the expenditure. This result is especially satisfactory, because considerable outlay on capital account is charged yearly against revenue. We have noted that the earnings of Railway Telegraphs for the conveyance of public telegrams are credited to railway not telegraph revenue. The Telegraph Paragraph 186.

We have stated the excess of receipts from Irrigation Works over working expenses and interest on loans at Rx. 700,000, to which should be added a further sum representing the improvement of the land revenue resulting from minor works of irrigation. On the other hand, the cost of minor works, averaging yearly Rx. 850,000, is charged to revenue. It may, therefore, be fairly said that in ordinary years India enjoys the benefit of the great system of irrigation works which have been carried out at a capital cost up to 31st March 1896 of Rx. 30,000,000, in addition to large sums laid out yearly on minor works of irrigation, and that this immense outlay practically imposes no burthen on the present taxpayer. Irrigation works. Paragraphs 187 to 193.

We have stated our reasons for arriving at the conclusion that the Indian taxpayer of the present obtains, even on the strict, and somewhat unfavourable principle adopted in Sir H. Fowler's annual return, the benefit of a vast railway system at a comparatively light cost. The fall in exchange has subjected the financial result of the Government railway policy to very severe trial. If the charge of military and famine protection lines and of lines under construction were eliminated, there would be no charge on the taxpayer, in other words, the true commercial lines pay their way. Further there is fair prospect with improved exchange that the charge on the taxpayer, even on the account as now presented, will entirely disappear. We think that the loss on purely military lines should be transferred to the head of military expenditure. Lastly, we think it a reasonable subject for consideration whether, if a fair and constant surplus should be hereafter realised, larger sums might not with advantage be devoted to the improvement of the lines. Railways. Paragraphs 199, 200.

Expenditure on Defence and Foreign Affairs.

354. The last head of expenditure to which we have directed our attention relates to Defence and Foreign Affairs. It comprises army expenditure, expenditure on military works, the charge of military railways, naval expenditure, and expenditure on Political, that is Foreign Office, Service. Paragraphs 201 to 230

We have calculated the total cost of these services, including exchange—

	Rx.
in 1856–7 (before the Mutiny) - - -	at 15,000,000
in 1862–3 (normal expenditure after the Mutiny) -	„ 15,860,000
in 1884–5 (end of our first period) - -	„ 18,750,000
in 1896–7 (end of our second period) - -	„ 27,630,000

The increase of 1884–5 over 1862–3 was 18 per cent.

The increase of 1896–7 over 1884–5 was 47 per cent.

The increase in the first period was comparatively small, although the fall in exchange at the close of the period was great. Indeed, if exchange be excluded, the increase would probably not have much exceeded $7\frac{1}{2}$ per cent. The progress of military and civil expenditure alike prove the economical administration of this period.

The increase in the second period was large. But here again the increase was largely due to the fall in exchange. If the effect of that fall be excluded, the increase in the second period would probably not exceed 29 per cent. The chief causes of it are to be found in the addition to the British force in India, and in the increase of the Native army, in the annexation of Upper Burma, in the increased allowances to the Native army to meet rises in the price of food, in the increase of recruiting and depôt charges at home, in the grant of deferred pay to the soldiers, and in the increase of the non-effective charges.

A growing preference for buying stores for the army in India instead of at home characterises the whole period. We have noted that, although there has been an increased demand for transport, reductions in freight have led not to an increase, but to an actual decrease, under this head.

The increase in the non-effective charge is formidable. The abolition of purchase has added largely to the charge for pensions to officers of the British army in respect of service in India. On the other hand, the conditions of short service are reducing

the pension charge of soldiers of the British Army serving in India. The charge for have pensions to officers of the Native Indian Army has increased very greatly, and we noted also a large increase in the pensions of ministers of religion attached to the Army.

Paragraph 220. We have recommended that an actuarial report should be obtained, showing the normal non-effective charge which the present regulations will entail upon the taxpayer under the different heads of non-effective charge, and also the proportion which the charge of non-effective service will bear to effective.

We have called attention further to the heavy charge upon the taxpayer in respect of military pensions formerly payable from military funds. We have stated that these military funds were taken over by the Government in 1866, and that the capital was applied in the reduction for a time of the annual charge. The capital has long been exhausted, and the whole dead weight of the pensions now falls upon the taxpayer. Mr. Jacob informed us that the charge is still increasing, but that ere long it will begin to diminish and will eventually die out. We advise that an actuarial report upon the future of this charge should be obtained.

III. Apportionment of Charge.

Paragraph 230. 355. The third branch of our inquiry refers to the apportionment of charge between the United Kingdom and India for services in which both may be said to have an interest.

These services may be classified as follows:—

1. Civil charges—
   - (*a.*) The India Office.
   - (*b.*) Aden.
   - (*c.*) The Persian Mission.
   - (*d.*) The China diplomatic and consular establishments.
   - (*e.*) The Zanzibar and Mauritius Telegraph subsidy.
   - (*f.*) The Euphrates, Tigris, and Karun river subsidies.
   - (*g.*) The Eastern Mail (P. & O.) contract.
2. Army charges, including the cost of expeditions beyond the Indian frontier.
3. Naval charges.

Civil Charges.

Paragraph 234. 356. *The India Office.*—We have recommended that the United Kingdom should contribute 50,000*l.*, either by a charge on the Consolidated Fund or by an annual vote, towards the yearly charge of the office of the Secretary of State.

Paragraph 240. *Aden.*—We have recommended that the United Kingdom should contribute one-half of the military charges of the fortress of Aden, the Home Government being consulted before changes are made increasing the amount of these charges.

Paragraph 242. *The Persian Mission.*—We have recommended that the charges of the Legation and Consulates in Persia should be evenly divided between the United Kingdom and India; that no addition should be made to those charges without the assent of the two Governments; and that the charge in each case should be complete, covering outfits, pensions, and contingencies.

Paragraph 243. *China Diplomatic and Consular Establishments.*—We have recommended that the decision of the Foreign Office Conference in 1891, fixing the contribution of India to this service at 12,500*l.*, should be upheld; that the amount of the contribution should be fixed for periods of (say) 10 years; that if, when the time of revision arrives, there should be a difference of opinion between the two Governments as to the amount, the point should be submitted for the arbitration suggested in paragraph 317; and that the present arrangement should remain in force for a period of five or six years.

Paragraph 244. *The Zanzibar and Mauritius Telegraph Subsidy.*—We have advised no change in the present arrangement under which India pays 10,000*l.* a year, half the subsidy remaining after deducting the contribution of Mauritius.

Paragraph 246. *The Euphrates, Tigris, and Karun River Subsidies.*—We have recommended that India should maintain the Euphrates-Tigris subsidy, and that the United Kingdom should maintain the Karun subsidy—an arrangement under which each country would approximately bear half the cost of these services.

Paragraph 247. *Peninsular and Oriental Mail Contract.*—The amount of India's contribution to this service has been lately decided under arbitration by the Earl of Morley. We have not, therefore, considered that an opinion from us upon it is required.

Army Service.

357. India pays the home charges of the British Army stationed in her territories, and we had first to consider the principle upon which those charges are calculated. Paragraphs 252–270.

They have been met, in the first place, by a capitation rate of 7*l.* 10*s.* for each man borne on the establishment of the British force in India, and, secondly, by the charge for "deferred pay."* The somewhat rough principle of adjustment by a capitation rate was adopted in 1891, after many years of dispute between the two Governments, at the recommendation of a Committee over which Lord Northbrook presided. The India Office think that the capitation rate is too high, the War Office that it is too low. In order to form an opinion upon the question, we examined the charges represented by the capitation rate. They are—1, the cost of raising and training recruits in England described under the general term of depôt charges; and, 2, various minor services.

The Indian Government think the charge for each recruit excessive as compared with the cost of the recruits raised by the East India Company for its local force. We have calculated that the Company obtained an untrained recruit at a cost of about 30*l.*, while the War Office supplied a trained recruit at a cost to India of about 35*l.* Considering that the War Office charge includes a period of training and that a recruit now is a more expensive product than he was half a century ago, we are not surprised at the contention of the War Office that 35*l.* does not cover the cost of a recruit to the War Office, and we do not, therefore, think the charge excessive.

The Indian Government urge further, that the system of short service, requiring, as it does, a greatly increased number of recruits yearly, imposes a heavy charge on Indian revenues without corresponding advantages. It is true that a much larger number of recruits is required under short service than under long service. But the system of short service carries with it a reduction in the charge for pension, and, with actuarial aid, we made a calculation setting the increase of charge, on the one hand, against the saving to be realised on the other, and we have found that, after debiting India with the charge of deferred pay, a saving to India will eventually result from short service. The operation of a change of system is, however, gradual, and that saving has not yet been attained.

We have come to the conclusion that it is not necessary to revise the capitation rate. We think that it might continue in force for a further period of five or six years, but that at the end of that time a general revision should take place.

The question was argued before us whether short service gives India an efficient European force. We have reviewed the evidence on this point in paragraphs 271–6 of our Report. We may say, shortly, that there has appeared to us to be a good reason for the contention that short service has become a necessity of our military system. The Government of India doubt the value of the Reserve to India, but, in our opinion, the Reserve must be regarded as a Reserve both for the United Kingdom and India. On this point we have noticed that the Reserve costs the Home Government 500,000*l.* a year, to which India is not asked to contribute. Care, however, should be taken that, if drafts from the Reserve are sent to India, the capitation to be paid upon them should be so adjusted as to prevent a double payment by India for the enlistment and training of the same man, if he should have served previously in India. Paragraphs 271–276.

Eight services other than those of recruiting, amounting in 1889 to 130,000*l.* a year, are covered by the capitation rate. One of these, that of agency, costing 3,000*l.* a year, has been abolished since 1889. Four of the services are small in amount, and we have not thought that the objections to them raised by the Government of India are tenable. The three remaining services, viz., educational establishments, expenses of soldiers awaiting discharge, and hospital charges, amounted in 1889 to 116,000*l.* Paragraphs 287–289.

1. *Educational Charges.*—The War Office measures these charges by the number of officers attached to this force employed by Great Britain and India respectively. So far the principle of a proportional charge is fair, but, if the Government of India can show that the number of officers included in the Indian proportion is excessive, the proportion should be readjusted. Paragraph 283.

2. *Expenses of Soldiers awaiting Discharge.*—We have agreed with the Government of India that soldiers returning from India should be passed into the Reserve without delay. It appeared to us that a soldier passing into the Reserve is practically available for the Reserve upon his arrival, and that India should be relieved of charge for him Paragraph 284.

* "Deferred pay" has recently been merged into the ordinary pay of the soldier.

from that date, if he is not an invalid. We do not think that the Government of India prove their point that the charge for invalids after arrival in England is excessive.

Paragraph 285. 3. *Hospital Charges.*—We have drawn a distinction between soldiers invalided home and soldiers falling sick on the passage home. India tends soldiers sent out to her who fall sick on the passage, and the Home Government should reciprocally tend soldiers returning home who fall sick at sea.

We have not thought it necessary to revise immediately the capitation rate on account of these considerations, which do not involve large amounts. According to our view a revision should take place at the end of five or six years, and advantage might be taken of the interval to examine these points.

The Home Charge for Non-Effective Service.

Paragraphs 290–294. 358. This head comprises payments to the War Office for pensions of officers and men of your Majesty's Army in respect of service in India.

Paragraphs 291–3. *Pensions of Officers.*—The charge includes India's share of the increased pensions granted to officers of the British Army in consequence of the abolition of purchase. The Government of India considers that the revenues of India should not be subjected to charge in consequence of that measure. We have not considered that this contention can be successfully maintained. No army can be maintained in efficiency if means are not provided for retiring officers who are incapacitated for service. The argument of the Government of India might have had force if the Imperial Government had asked India to contribute to the compensation paid to "purchase" officers on the abolition of purchase; but they have not done so, and India is only asked to take her share of the non-effective charge indispensable to an efficient army, a charge which she has adopted in the case of her old European force, and which she adopts in the case of her Native army.

Paragraph 294. *Pensions of non-commissioned Officers and Soldiers.*—We have pointed out that under the conditions of short service the pensions to soldiers of the British Army are a diminishing charge.

Chelsea and Kilmainham Hospitals.

Paragraphs 295–6. 359. The War Office referred to us a question as to "what proportion (if any) of the "cost to the public of Chelsea and Kilmainham Hospitals should be paid by India." The Audit Office at home has drawn attention to the fact that India does not contribute her fair share towards the expenses of the hospitals; and, in consequence of this action of the Audit Office, the point has been referred to us. On the one hand an additional sum of about 5,000*l.* a year might be claimed from India in respect of the Indian service of soldiers in those hospitals; on the other hand the War Office holds a balance of unclaimed prize money arising from Indian wars, amounting to above 44,000*l.* We have recommended that matters shall be left as they are, that the War Office should retain the prize money, and should not make at present any further claim on India for a contribution to the hospitals.

Payment for Indian Troops employed out of India.

Paragraphs 297–308. 360. The Imperial Government has frequently obtained the temporary assistance of troops from India upon military expeditions, and there has been much discussion both between the two Governments and in Parliament as to the principles upon which that assistance should be given. It is clearly for the public interest that the United Kingdom and India should arrive at a distinct understanding upon the subject.

The Secretary of State for India in 1896 expressed his opinion that a part of the burthen might be borne by the Government supplying the troops, if that Government has a *distinct and special interest* in the matter at stake. We have concurred generally in the proposition, but it does not say who is to define the *distinct and special interest.* The difficulty is to discover the means by which the interests of the two Governments can be most accurately and authoritatively ascertained. The final authority for determining the relative interests of the United Kingdom and of India in a service must reside in the Home Government and in the Parliament which supports it with its confidence. Justice would probably be secured if principles could be formulated which should guide, although they might not govern, the

formation of the decision. Both Lord Salisbury and Mr. Balfour have expressed a desire that such principles should be ascertained, and have suggested the formation of a tribunal of arbitration. We agree that such a tribunal should be constituted, but it can only be one of mediation. Principles, however, might be laid down which would have a most powerful influence when future decisions are under consideration, whilst a tribunal would certainly facilitate their application to future circumstances. Lord Northbrook gave us evidence as to this subject, and he found in the geographical scene of the operation of the troops a clue to the solution of the problem of contribution. We agree with his Lordship that the principle of geographical distribution might be accepted as affording fair *primâ facie* ground for the allocation of such a distribution, and might be laid down in an official paper to which the Governments of the United Kingdom and India should be parties. We have submitted for consideration the heads of a Treasury Minute which might be drawn with that object.

The Minute approved on the one hand by your Majesty's Government, and on the other hand by the Secretary of State in Council after consultation with the Government of India, might provide:—

1. That India has not a direct and substantial interest in the employment of forces in Europe; in Africa, west of the Cape of Good Hope; in Asia, east of China.
2. That India has a direct and substantial interest in keeping open the Suez Canal, and in the maintenance of order and established government in Egypt so far as the security of the Suez Canal is affected thereby. This interest might extend to the coasts of the Red Sea only so far as to maintain the inviolability of that shore, but not to the Soudan, or further extensions of Egypt up the valley of the Nile or its affluents.
3. That India may have a modified interest in questions affecting the East Coast of Africa as far as Zanzibar, and the African islands in the Indian Ocean, except Madagascar.
4. That India has no direct or substantial interest in the African coast south of Zanzibar.
5. That India has a direct and substantial interest in questions affecting Persia, and the coasts and islands of Arabia and of the Persian Gulf.
6. That India has a direct and substantial interest in questions affecting Afghanistan and that part of Central Asia which is adjacent to the borders of India or Afghanistan.
7. That India has sole interest in punitive expeditions on her borders.
8. That India has a direct and substantial interest in questions affecting Siam.
9. That India has a modified interest in questions affecting China and the Malay peninsula.
10. That India has no direct or substantial interest in Japan or countries or islands east and south of China.
11. That special cases may arise giving to India a direct and substantial interest in questions connected with Europe or other territories in which the minute declares her to have, as a general rule, no interest.
12. That in every case where the two Governments are not agreed, no contribution should be made by India until the sanction of Parliament has been obtained.

We think that in the event of the Governments of the United Kingdom and India not agreeing upon the question of "distinct and special" interest, a committee might be constituted of two members appointed by Your Majesty's Government, and two members appointed by the Secretary of State in Council, and of a chairman to be selected by the four members. This committee should make a report to the Government which should be presented to Parliament; and the Government, within a prescribed period, should present its final determination for the satisfaction of both Houses. The Treasury Minute would aid the committee and the two Governments in arriving at a decision.

3. *Naval Charges.*

361. We considered next the contribution made by the Government of India towards the charge of vessels of the Royal Navy stationed in Indian waters.

We received evidence on this question from representatives of the Admiralty and from the Director of the Indian Marine on behalf of the Government of India. The latter appeared to us to argue against the principle of any contribution by India for naval protection. If so, it appears to us that he differs from and goes beyond the views of the Government of India itself, as expressed in 1862, and beyond the views of the Secretary of State as expressed in 1895, and in a Memorandum, which has been laid before us.

Paragraphs 309–15.

We confined ourselves to the question put by the Secretary of State. He asked whether under all the circumstances it is right that the Imperial Government should exact from India within 17,000*l.* of the full charge, effective and non-effective, of the squadron of the Royal Navy detached for the service of India.

India maintains a local marine for local purposes. She is responsible for the defence of her own coasts, and she contributes an annual sum of 100,000*l.* towards her general naval defence, which is undertaken by the Admiralty. The question of the Secretary of State refers to the last of the arrangements.

India formerly maintained a navy of her own, and it is estimated that her general naval defence costs her annually something over 300,000*l.* The Indian Navy was abolished after the Mutiny, the charge of general naval defence being transferred to the Admiralty, and for six years no claim was made upon her by the Home Government, but since 1869 she has paid a contribution to the Admiralty. This contribution was fixed a few years ago, upon principles laid down by Lord Salisbury and Lord Rosebery, at 117,000*l.* a year for a period ending in 1901, but this contribution was reduced with the consent of the Admiralty and Treasury to the round annual sum of 100,000*l.*

When, therefore, we were asked whether India ought to pay for her general naval defence a contribution in itself moderate, which is considerably less than the estimated cost of the squadron detached for her defence, we could only answer that the contribution asked of her is not excessive. That squadron is not a full measure of the naval aid which the Imperial Government renders to India. The British Navy, not that small squadron, constitutes the reserve upon which, in case of naval emergency, India would draw, and to that reserve India does not contribute.

It is argued that the great self-governing colonies are treated more liberally than India. It is true that in 1862, when the Indian Navy was abolished, these colonies made no contribution towards the Imperial Navy, but they had then sparse populations, and were only at the outset of their career. But Imperial Naval defence is far more expensive now than it was then, and the Australian colonies and the Cape do now contribute to their naval defence on principles not dissimilar from those which apply to India. Moreover, the tendency of public opinion is in the direction of the acknowledgment of this obligation by members of the Empire. We do not think that a reduction of the contribution can fairly be based upon this plea.

The Secretary of State, however, based his plea for reduction not only on general but on specific considerations. He contended that Your Majesty's vessels on the Indian station are not at the disposal of the Indian Government, as the army is, and that the vessels not employed in the Persian Gulf must be occasionally employed on other than Indian service. The Foreign Office Conference on the subject of the Naval Contribution, over which Lord Salisbury presided, laid it down that it would be the duty of the Naval Commander to comply with the wishes of the Indian Government, and that vessels of the Indian squadron are not to be employed beyond certain limits to be agreed upon, except with the consent of the Indian Government. We understand that these conditions are observed, and they appear to us to secure to the Government of India sufficient control. The Secretary of State further objected that the number and class of vessels is not that which the Government of India think necessary. The Government of India object to large vessels being reckoned among the ships the detailed cost of which is to be paid by the Indian Government. We consider that India is bound to satisfy Lord Rosebery's award, but that it does not necessarily follow that she should pay her contribution in the shape of the detailed cost of particular ships. Friction might be removed if ships of the size and number which the Government of India require for coast police were supplied at the actual cost, and the balance of the 100,000*l.* were paid over in the lump, as the contribution of India to the general cost of the Navy. We think that there is nothing in Lord Rosebery's award to deter the Government of India from representing their case from this point of view.

Settlement of Administrative Charges.

Paragraphs 316–7.

362. We have suggested (paragraph 308) the constitution of a tribunal of arbitration when a difference of opinion arises between the Government of the United Kingdom and the Government of India as to the "distinct and special interest" of the two Governments respectively, in expeditions; but differences of opinion arise on other questions of an administrative character. The Home Government undertakes various services for the Indian Government, and the claims which the Home Government puts forward in respect of those services, lead frequently to protracted official correspondence with no satisfactory result. Lord Northbrook spoke of these controversies as amounting almost to a scandal, and he suggested as a remedy the choice of an arbitrator having no special knowledge of the subject, and unconnected with either of the Governments;

and that the cases of the two Departments concerned might be placed before him rather in the way of legal arbitration. He named the late Mr. Justice Hannen as a type of the arbitrator he would select.

We agree with Lord Northbrook, and we think that both Governments might trust, on these departmental questions, the perfect impartiality of a man of judicial position. It is, however, essential that the award of the arbitrator should be loyally accepted by both sides as closing the question. The arbitrator would of course deal only with departmental differences of opinion. Questions of policy would not be referred to him.

Liberal Treatment.

363. The last and most difficult section of our report deals with the appeal of the India Office and of the Indian Government for liberal treatment. This appeal is put forward most effectively in a Memorandum laid before us by the Financial Secretary of the India Office. Paragraphs 318–39. Appendix 48, p. 362.

The Memorandum refers, in the first place, to the Committee of the House of Commons, which reported in 1874 on Indian Expenditure. The Committee recommended:—

1. That strict impartiality in financial arrangements must be secured for India.
2. That that impartiality will be most effectually secured by watchfulness on the part of the House of Commons.
3. That English Estimates ought not to be relieved at the expense of Indian revenues.
4. That India, as a component part of the Empire, must be prepared to share in the cost of a system, the expense of which may be enhanced for Imperial purposes.
5. That the payments by India to England should take the form of fixed rates carefully computed and remaining in force for a period of years; that care should always be taken to consult the India Office upon proposed changes which may affect India.

We concur in the views of the Committee, and have been mainly guided by them in the opinions which we have expressed.

With reference to their last point we consider that there ought to be no instance of a charge imposed upon the Indian Government without previous consultation with the Secretary of State. Communication with the Secretary of State is consultation with the Indian Government. We further consider that no alterations involving expenditure in India should take effect in India till the beginning of the financial year following their adoption.

The reasons given in the Memorandum of the India Office for asking liberal treatment may be summarised as follows:—

1. The cost of recruiting is excessive, and short service has increased the cost of transport and entailed a charge for deferred pay.
2. India is used more as a reserve for England than England is for India.
3. India frequently pays the charges of its own troops used for English purposes.
4. India is a good training ground for the English Army.
5. India provides a large army to maintain British supremacy in the East.
6. The abolition of purchase has increased the pensions of officers.
7. A different organisation of force is needed in the United Kingdom and India; there can, therefore, be no true partnership between them.
8. The pensions to European officers and soldiers out of Indian revenues are spent in the United Kingdom.

We have given in paragraph 327 our reason for not admitting reason 1. We have in paragraph 328 made recommendations which would, in our opinion, meet reasons 2 and 3. Reason 4 is a question for military experts rather than for civilians. It is one apparently upon which military authorities are not agreed, and, so far as it is of weight, it may be argued equally well that Imperial wars are a good training ground for that portion of the British Army which is stationed in India. In paragraph 330 we have given our reasons for differing from reason 6. It appears to us on reason 8 that the Indian Government employs a soldier for a certain remuneration, present and deferred. When the soldier has performed his stipulated service, he is entitled to the pension which formed part of his contract, and the Government of India has no right to claim that it should be spent in India.

On reasons 5 and 7, it appears to us that for the maintenance of peace within India and for the defence of its frontiers, a European force must always be kept there. We think justice is done to both if each Government is conceived as fighting out the bargain on strict commercial principles; and that the United Kingdom and India should therefore be strictly separated in calculating the payment which should be made for that force. In that case India would determine the quantity and character of the troops required, and the United Kingdom would state the terms upon Paragraphs 332-9.

which it would supply them. But it may be argued that the political connexion of India with the United Kingdom makes her more liable to attack from without than she would be if she were independent. We doubt if this is the case. We do not think that India would enjoy increased immunity from attack if independent; and, if any outside power took our place, we know no reason why such a power should be regarded with less jealousy than ourselves. If India had to bargain for herself, she might be contented with troops less highly organised. We, however, are persuaded that it is on the whole to the interest of India to receive troops up to the highest standard of European efficiency. It is urged by India that the exigencies of recruiting at home put India to heavy expense in bringing out yearly a larger number of recruits than would be necessary if soldiers remained longer with the colours than at home. We have shown, in our examination of the financial results of short service, that this contention is true, and, although we have shown that on the whole short service will eventually, taking all its conditions and consequences together, result in a saving, not an increase, of expense, yet that result is not attained as yet, and pending the revision of the capitation rate, we think that the United Kingdom might undertake half the cost of the transport of troops to and from India.

When the time for revising the present arrangement arrives, the exceptional position of India as to military charges should be borne in mind. If, on the one hand, she imposes a certain strain on the Imperial resources in the supply of services for which she properly pays, on the other hand, she renders services to the Imperial Government which should not be disregarded.

364. The grants, which we propose should be made by the Imperial Government are approximately as follows:—

	£
In aid of the charge for the India Office	50,000
Half the military charges for Aden	108,000
Increased contribution to the charge of the Persian Mission	5,000
Half the cost of the transport of troops to and from India	130,000
	£ 293,000

365. We thank Sir Henry Waterfield and the officers of the India Office for the invaluable assistance which they have given us throughout our inquiry. We wish especially to place on record our obligation to the late Mr. Jacob, the Comptroller and Auditor-General of India. His vast knowledge, experience, and ability were of the greatest service to us, and we cannot but express our sense of the great loss which the Government of India has sustained in his untimely death.

366. Lastly, it is a pleasure to us to return our thanks to Mr. Campbell for the ability and untiring zeal with which he has discharged his duties as Secretary to the Commission.

RESERVATIONS.

1. *By Lord Welby, Sir Ralph Knox, and Mr. Ryder.*

We regret greatly that the Commission decline to recommend the creation in India of a Comptroller and Auditor-General detached from, and independent of, the Executive Government, whose financial acts he audits.

The Indian Comptroller and Auditor-General is at the present time an officer of the Indian Treasury, entrusted with important executive duties, which occupy much of his time. He gives the remainder of his time to his functions as Comptroller and Auditor-General.

It is a cardinal rule of audit that an auditor ought not to audit his own executive acts, but it is clear that the Indian Comptroller and Auditor-General must audit his own acts as an executive officer of the Treasury. But, without laying unnecessary stress upon this point, we must urge that the arrangement is wrong in principle. It confuses functions which are in their nature distinct, and which ought to be kept distinct. The confusion tends to diminish both in the auditor's own eyes, and in the eyes of the public, the importance of the audit functions.

Objection is taken to the change on various grounds. In the first place the Indian Government object to the cost. They exaggerate, we think, the increase, which would be immediately an addition to the salary of the auditor and the possible creation of a new Deputy or Assistant Secretary in the Treasury. But in our view an independent auditor, reporting to an independent Committee, is a constant check on expenditure, because he can enforce a reference to other and important authorities b fore the constituted rules of the service are set aside; and this check would more than compensate for any moderate increase of expenditure which the change would entail.

Again it is said that no change is desirable, because no evidence has been adduced of the prevalence of irregularities. The same might have been said at home before 1866, but we know that the reports of the independent auditor in England have brought to light irregularities, many of them not the less serious because they did not involve the malversation of public money. It is quite possible that the Ministers and Officers of the Departments concerned, were of opinion that the vigilance of the auditor was a needlessly costly luxury; we may be sure, at all events, that they thought the auditor a bore. That, however, has not been the view of Parliament and of the public. The plea that there is no evidence of irregularities is equivalent to the cat's assurance that the cream is safe. The prudent housewife prefers more independent testimony. The true advantage, however, of independence is the knowledge throughout the service that the auditor will report without fear or favour unauthorised payments which come to his notice. That knowledge constitutes in itself a most effective security against irregularity.

Lastly, it is said that a system of audit which is good in England is not necessarily good in India. It is not the system but the principle of audit which is in question, and it would be a new theory that the principle upon which an audit is to be conducted varies with the temperature. This principle lays it down that the complete efficiency of the auditor can only be secured by detaching him from, and making him entirely independent of, the Government, and independent also of the class spirit which is invariably present in a great service.

But if an independent auditor is essential to the efficiency of the audit system in England, it is even more so in India. In England the administration acts under the eye of Parliament. If no such audit as the present were in existence, ministers and their officers would be on their guard against questions and discussions raised on information acquired by private members. There is no such line of defence for the taxpayer in India. The bureaucracy in India has no similar check upon it. No one, of course, likes control, and in that respect bureaucracies do not differ from individuals. The bureaucracy in India is a noble service of the highest character, but its character is not higher than that of the services at home, and it is difficult to assign a reason why the safeguard of a vigilant control should be less complete in India than it is in England.

We are convinced that the complete independence of the auditor is essential to a truly efficient system of audit, and we record our opinion that until the Indian Comptroller and Auditor-General is made entirely independent of the Indian Executive Government, the audit system of India is and will be gravely defective.

WELBY.
RALPH H. KNOX.
G. L. RYDER.

---

2. *By Sir James Peile.*

I have signed the report in token of general concurrence. I add a few words of explanation or qualification on some passages in it.

Para. 67.—The confidential memorandum, which a member of the Viceroy's Council is to be permitted to write and forward through the Viceroy to the Secretary of State, may be withheld from the public (this is what Lord Cromer suggested), but should not be withheld from the members' colleagues.

Para. 129.— It is suggested that the Indian Budget provision for famine relief and insurance should be increased and made permanent like the new Sinking Fund in England. I doubt whether the conditions of Indian finance admit of this at present.

Para. 180.—I do not think that it is expedient to adopt in India the pension scale of the English Civil Service. The result would be an increase of the Pensions of the Indian Civil Servants who retire from high appointments, but the anticipated benefit to the taxpayer would be obtained by giving pensions less than 1,000*l.* a year to the average Civil Servant. I do not think this desirable.

Para. 233.—Contribution by Parliament to the charge of the India Office. "This "contribution may be made the subject either of a charge on the Consolidated Fund or "of an annual vote."

The proposal to contribute is very reasonable, but I am strongly opposed to any measure which would alter the control of expenditure for Indian purposes, or the payment of the salary of the Secretary of State from the revenues of India, as now regulated by the Statute of 1858 [21 & 22 Vict. c. 106].

Para. 243.—China Consular Establishments. India pays 12,500*l.* No change recommended.

I did not dissent from this conclusion. But this payment is really a relic of a long extinct trade monopoly, and I think that the British Government might very well resign it.

Para. 310–15.—Naval charges.

I do not consider the present contribution of 100,000*l.* yearly by India other than a moderate payment for being made safe against all the navies of the world. The award of Lord Rosebery made India chargeable for a contribution for general Navy purposes, and we cannot dispute it, though I take that contribution to be indisputably an addition to the payment first made by India in 1869, which was demanded to meet the cost of a special service of "ships employed in the Bay of Bengal, the Arabian Gulf and "the Persian Gulf and the Red Sea," as is clearly stated in the Admiralty letter to the India Office quoted in para 312. But I do not think that the 100,000*l.* is shown to be a moderate charge by comparing it with about 300,000*l.* which India spent annually on her navy before 1869. For, besides paying in all 160,000*l.* yearly to the Admiralty, India maintains a Marine which is shown in another part of the Report to cost about 436,000*l.* a year. Armament for three of the ships of the Indian Marine has been provided, but has been landed and stored on the requisition of the Admiralty. There is apparently some duplication of force here, as India pays the cost of the smaller Navy vessels employed for the police of her coasts, while she maintains ships and armaments capable of performing the same duty. The objections to employing these latter vessels do not seem to be very strong. For the Royal Indian Marine Act of 1884 (47 & 48 Vict. c. 38) says in its preamble, "Whereas a marine establish-"ment called Her Majesty's Indian Marine Service is employed under the direction of "the Governor-General of India in Council, for the transport of troops, the guarding "of convict settlements, the suppression of piracy, the survey of coasts and harbours;" and the Act gives power to the Governor-General in Council to make laws for maintaining discipline in that service; the laws are to apply to offences within Indian waters; and the expression "Indian waters" includes the "high seas between the

" Cape of Good Hope on the West, and the Straits of Magellan on the East, and all " territorial waters between those limits." Now the Statute is defeated as regards suppression of piracy by the refusal to let the Indian Marine vessels carry armaments. Yet the Act passed under this statutory power—Act XIV. of 1887, "for the better " administration of Her Majesty's Indian Marine Service"—contains provisions for the punishment of misconduct in presence of the enemy, which implies that the Indian Marine vessels are combatant. And Admiral Kennedy says that, if these vessels were armed in time of peace, the Indian Marine Act would be quite sufficient to maintain discipline, while the Statute of 1884 provides that in time of war Her Majesty may direct that any vessel belonging to Her Majesty's Indian Marine Service, and the men and officers serving thereon, shall be under the orders of the Senior Naval Officer of the Station where such ship may be, and the men and officers shall be under the Naval Discipline Act in force and the Admiralty Regulations. Discipline is thus provided for, in peace and war. And I contend that the Admiralty orders forbidding any Indian Marine vessel to carry an armament do cause unnecessary expense to India for Navy substitutes. Admiral Kennedy admits that the Indian Marine could do the work at considerably less cost. Q. 8476.

Para. 339.—

" We consider that the exceptional position of India as to Military Charges should always be kept in view, and it will undoubtedly be remembered at the revision of the Capitation rate, when the contention of the War Office that India does not pay the full cost of the recruit will also be examined." Q. 8454.

Appendix No. 51, Sub-appendix I., Vol. II., p. 380.

Statement by the War Office of the annual cost of recruiting and training the soldiers supplied to India.

I should have liked to add something to what is said in paragraphs 338–9 of the Report on " the exceptional position of India as to Military Charges." It is needful to remember that the foreign and military policy pursued in India, while it certainly aims at the safety of India, is also the policy of a great European State, and therefore a policy of mixed elements. The dictum that India should contribute part of the cost of British Military operations in which India has a direct and substantial interest, may easily be turned round. Here there is a partnership which implies joint objects and interests, and that I think is a reason for great moderation in dealing with the home effective charges. I therefore strongly deprecate an increase of charge against India at the revision of the Capitation rate, on the contention of the War Office that the cost of recruiting and training the soldiers supplied to India is in excess of what India pays, and that, by including every conceivable item of cost, a much larger bill might be made out. Such treatment of the case would be appropriate if it were merely a question of supplying on commercial principles a military contingent to a foreign country in whose future England is not substantially interested.

These remarks do not of course apply to the Civil Expenditure on Administration, Justice, Public Works, Education, Sanitation, and the like. The Indian taxpayer may fairly criticise the method and scale of this expenditure, but there is no ground for saying that there is any other consideration involved in it, than the " moral and material " development of India to the best of our ability.

Here the British Government is not a partner but a guardian.

JAMES B. PEILE.

---

3. *By Sir Andrew Scoble and Sir R. Mowbray.*

We have signed this Report, subject to the following reservations:

1. By the Act for the better government of India (21 & 22 Vict. c. 106) " the " expenditure of the revenues of India, both in India and elsewhere," was made " subject to the control of the Secretary of State in Council " (section 41), and it was provided (section 53) that the Secretary of State in Council should annually lay before both Houses of Parliament " an account for the year preceding that last " completed of the annual produce of the revenues of India," and of " all the annual " receipts and disbursements at home and abroad on account of the Government " of India. . . together with the latest estimate of the same for the last financial " year." The distinction thus drawn between the function of the Secretary of State in Council, and of Parliament, in regard to the administration of Indian finance appears to us important; and, until Parliament shall otherwise determine, we should

be averse to any change which, on the one hand, might tend to diminish the responsibility of the Secretary of State in Council, or, on the other hand, to impose upon Parliament any extension of the supervision which it already exercises. For this reason, we are opposed to the appointment of such a committee as is contemplated by paragraph 91 of the Report, some of the members of which are to be recruited from outside the Indian Council; and to the grant from Imperial revenues which is recommended in paragraph 234 of the Report, unless that grant is made from the Consolidated Fund.

2. The occasion for the separate representation of the interests of the East India Company in Asiatic diplomacy having ceased on the transfer of the Government of India to the Crown, we can see no reason why India should any longer be called upon to pay any contribution to the cost of our diplomatic and consular establishments in the East. We think the conduct of the external foreign affairs of India should be transferred to the management and charge of the British Foreign Office; while the internal foreign affairs of India (including Afghanistan) may fairly be left to the management and charge of the Government of India.

ANDREW R. SCOBLE.
R. G. C. MOWBRAY.

---

4. *By Mr. Buchanan.*

Whilst I agree in the specific recommendations of the Commission that—

(1) There should be a substantial annual contribution of 50,000*l.* by the Imperial Exchequer to the cost of the India Office;

(2) The cost of the government of Aden should be divided between the Imperial and Indian Exchequers;

(3) The expenses of the sea-transport of troops between the United Kingdom and India should be shared equally by the two countries;

the above recommendations, if carried out, do not in my judgment satisfy the claim which India has put forward to more liberal treatment as regards apportionment of charge.

India's financial relations to the Government of the United Kingdom differ fundamentally from those of the Colonies or any other part of the Empire.

Not only are all home civil charges for the Colonies and dependencies borne by the Home Government, but large grants (amounting to several hundred thousand pounds annually) in aid of the administration and development of many colonies and dependencies are made from the Imperial Exchequer.

No colony or dependency makes any contribution towards the diplomatic or consular service of the Empire.

With the exception of the Australian and Cape contributions, amounting to 123,000*l.* and 30,000*l.* respectively, the naval defence of our colonies and dependencies is defrayed entirely from Imperial funds.

From a limited number of Crown colonies, there is an appropriation in aid of army expenditure amounting for the year 1899–1900 to 283,000*l.* With this exception the whole charges of British troops, employed outside the United Kingdom, are uniformly borne by the British Exchequer.

The position of India is very different. She pays the whole cost of the India Office and its staff, and the office itself was built and is maintained out of Indian funds. She pays a considerable proportion of the charge for missions and consulates in Persia, China, and other places, and in defraying the expenses of the government of Aden—a fortress a thousand miles from her shores—she discharges duties and bears expenses, elsewhere looked upon as exclusively Imperial.

She pays 100,000*l.* per annum to the Admiralty for the services of Her Majesty's ships on the East India Station, and another 59,600*l.* per annum for the maintenance of the naval floating and coast defences, which she has herself constructed at her own expense. She has surveyed her own seas and polices them, for which and other purposes she maintains a marine of her own, and she has constructed and maintains a dock at Bombay available free of charge for the use of Her Majesty's ships.

In so far as the military defence of India is concerned, India pays everything, the United Kingdom nothing.

India bears the entire cost of the army, British and Native, within her borders, the entire cost of the transport of British troops both to and from India, and she

pays besides an appropriation in aid of home military expenditure of more than a million and a half per annum.

It should be noted that she not merely pays and maintains the British troops within her borders, but provides guns, ammunition, and warlike stores for them, and builds and maintains all barracks. All military works, whether for the British or Native army, for Imperial or more particularly Indian defence, are constructed and paid for by India. Under the Military and Naval Works Acts of recent years, an expenditure amounting to many millions for the purposes of Imperial defence is being made from the British Exchequer and on British credit at home and in all parts of the Empire, except India. No aid has ever been given to India by the Imperial Government for the construction of similar works.

India has also been called upon from time to time to lend her troops for military service outside her own frontiers and to pay a part, and sometimes the whole, of the expenses of these non-Indian wars.

It cannot be a matter of surprise that those responsible for the Government of India have frequently protested against this apparently unequal treatment, and that ground has been afforded for the expression of a sense of injustice on the part of the Indian taxpayer.

The question arises whether, considering the important Imperial duties which India discharges, particularly in the military defence of the Empire, she has an equitable claim to a readjustment of the charges now laid upon her.

The principal payments made by India to the Imperial Exchequer may be thus classified:—

I. Diplomatic and consular charges, chiefly in Persia and China, amounting to upwards of 43,000*l.* per annum.

II. Naval charges, consisting of the two payments above-mentioned of 100,000*l.* and 59,600*l.* to the Admiralty.

III. Occasional charges for troops engaged in military operations beyond the frontiers of India.

IV. Military charges, consisting (as entered in the Estimates for the year 1899–1900) of payments—

	£
" To meet expenditure for raising and training recruits for India	548,700
" For deferred pay for service on the Indian Establishment	181,000
" For non-effective services of the European army serving in India	856,238
Total	£1,585,938

There is one common feature in these charges. They are payments paid from time to time for a short term of years after long negotiation and correspondence between the two governments. When the term expires the same negotiations and discussions are resumed. The last word in all cases is and must be with the Home Government. India always protests, and there are few of these charges in the justice of which she has acquiesced. These irritating negotiations, which Lord Salisbury has described as "squalid" and Lord Northbrook as a "scandal," are an unmixed evil. And it will be a great gain, political as well as financial, if some of these charges and the most contentious of them, can be done away with altogether, and others placed on a more stable foundation.

In order to justify these charges, various (and sometimes conflicting) theories are brought forward of the supposed relation of India to the Home Government. Sometimes she is treated as an independent power, at other times as in a position of strict administrative and legislative dependence. Sometimes she is spoken of as a partner in a joint concern, at other times as a more or less unwilling purchaser in a limited market.

These theories would not demand attention if it were not that frequent use is made of them by public Departments at home, particularly by the War Office, when imposing new charges on India.

The theory frequently put forward that the United Kingdom and India are "partners having an equal interest in respect of a joint undertaking" appears to be untenable, and the arguments adduced by Lord Cromer (when Finance Minister) in his Despatch of March 2, 1883 (Vol. II., App., pp. 365–6) unanswerable. "The Indian "authorities," he says, "are so far from having an equal voice in the decision on

"such matters, that it may be said without exaggeration they have scarcely any "voice at all." The Indian Government, however strongly it may protest, must always in the end agree to the terms imposed on her. India is a dependency of the United Kingdom, and her government strictly dependent on that of the United Kingdom.

If, however, the Home Government is supreme, she ought to exercise her supreme power with moderation and consideration. If the Indian Government is dependent, she should enjoy some of the advantages of dependence and be free from some of the burdens of independence.

It may be laid down as a cardinal principle that within her own borders India shall pay her own way, and that she shall provide not merely for her own internal government and protection, but generally for her defence against external as well as internal foes. No grant-in-aid from Imperial funds should be made to the Indian Government for Indian purposes within India itself except on very rare occasions and under very exceptional circumstances. Were such a practice to arise, it would seriously lessen the financial responsibility and administrative independence of the Government of India.

On the other hand, payments made by the Indian to the British Exchequer should also be exceptional, and in each case need special justification. The test of their fairness or unfairness may be taken to be whether they are or are not payments for Indian services or purposes in India.

Of course there are payments, such as the purchase of railway and other stores by the Indian Government in this country, about which there is no question. It is the four main branches of payment noted above that demand attention.

I. *Diplomatic and Consular Charges.*—Applying the above test, it is clear that India should be relieved of all charges for Missions and Consulates in Persia, China, and other places. Elsewhere throughout the British Empire these duties are Imperial duties, and their expenses defrayed from Imperial funds. No valid reason can be adduced for placing an exceptional burden in this respect on India.

II. *Naval Charges.*—The 59,600*l.* paid to the Admiralty by India for the working of her coast defence, ships, &c. is a perfectly justifiable charge, as forming a charge for services in India.

The sum of 100,000*l.* for general naval expenses is not, perhaps, excessive for the work done by Her Majesty's ships on the East India Station, and may be said to guarantee to India the protection of the British Navy in time of war; on this account it may be defended. It should, however, be borne in mind that for seven years after the abolition of the Indian Navy, from 1862 till 1869, India was not called upon to make any contribution. From 1869 to 1887 India was made to pay 70,000*l.*, then for some years 38,500*l.*, and now 100,000*l.* The charge is one that has caused frequent and not very harmonious negotiations between the two Governments (Vol. II., App. 46 and 47, pp. 309–361). The sum of 100,000*l.* is a very small item in a naval expenditure of over 27,000,000*l.*, and considering the comparative resources of the two exchequers, and the important part that India's military power plays in maintaining British supremacy in the East, it is perhaps hardly worth exacting.

III. *Charges for Military Operations beyond the Frontiers.*—This again is a subject that has been a constant matter of dispute, often protracted and out of proportion to the amount involved, between the Home Government and the Government of India.

A distinction, it appears to me, can be drawn between operations beyond the land frontiers of India, say, on the Persian, Afghan, Chinese, or Siamese borders, and the cases in which Indian troops have been called on for service over sea.

In the former case it is clear that Indian interests will always be affected and India must always bear a portion, sometimes the whole, charge. In my judgment she should bear the whole charge, except in those instances in which, although the immediate contest is with the enemy over the border, the real struggle is with a European or other Great Power beyond.

On the other hand, over-sea expeditions cannot be, and never have been, undertaken by India on her own initiative. In such cases it is the Home Government that calls upon India to furnish troops for military operations, the main interest and object of which are necessarily Imperial and not Indian. It would only be fair to make it obligatory that in all cases in which the Indian Government is called upon by the Home Government to furnish troops, European or Native, for an expedition beyond

the maritime frontiers of India, the Home Exchequer should bear all the expenses, ordinary and extraordinary.

IV. *The Military Charges* come last, but they are by far the largest and most important.

It has already been pointed out that, in so far as the military defence of India is concerned, India pays everything, and the United Kingdom nothing. And yet the maintenance of the military defence of India is one of the greatest of Imperial questions.

The military strength of India is the main factor in the strength of our Empire in the East. In virtue of that strength Great Britain is a great Asiatic power. We have had overwhelming practical evidence of the value to the Empire of the military forces of India in the aid, both direct and indirect, which she is rendering to us in the South African War. Nearly 6,000 British troops on complete war footing were rapidly despatched at a critical moment from India to Natal, others have followed, and Indian Native regiments now garrison Mauritius, Ceylon, Singapore, and other places from which British troops have been withdrawn for the purposes of the war.

Surely, therefore, both on general grounds and from our recent experience of the efficient help that India's military strength can give to the Empire, it is established beyond question that India's strength is the Empire's strength, and that in discharging these Imperial duties India has a fair claim that part of the burden should be borne by the Imperial Exchequer. There may be difficulties as to the method of making the charge and the amount, as to the equity of the claim on the part of India there can be no doubt.

It has been suggested that it might not be inequitable to consider 10,000 (or some such number) of the British troops in India as representing the force maintained there for Imperial rather than Indian needs, and that the expenses or part of the expenses of these troops might be borne by the Imperial and not by the Indian Exchequer.

Such a proposal is open to two practical objections. It would imply that the British force in India is larger than is necessary, which according to the evidence laid before the Commission is not the case. Secondly, it would divide the financial and administrative responsibility of the Government of India within the limits of India, and that too in the military department, in which above all others unity of authority is indispensable. Great though the burden of military expenditure in India is on the finances of India, the Government of India should continue to be exclusively responsible for all military administration within its borders.

But if there are practical difficulties in the way of a partition of military expenditure within India itself, it is all the more necessary to examine the military charges that India is called upon to pay at home, in order to determine whether they are in all respects fair and reasonable.

These payments consist of:—

	£
Capitation grant amounting to	548,700
Deferred Pay	181,000
Non-effective services of European force in India	856,238

If we accept the principle, that for the services of the 74,000 British troops in India, India shall pay, it may be contended that the two latter items form part of the pay and expenses of the British troops on the Indian Establishment, earned during the time they are in Indian service and of which service India gets the benefit.

The Capitation Grant stands in a very different position. Under that heading India is compelled to pay to the British Exchequer 7*l.* 10*s.* per head per annum for every British soldier on the Indian Establishment, in addition to paying all his pay and expenses, and a proportion of the non-efficient charges for the time she has had his services.

The 7*l.* 10*s.* is represented as the cost price of the recruiting and training of the British soldier at the time he is sent out to India, and India is made to hire British soldiers at that price.

The charge has no parallel elsewhere in the Empire. It would never have been made *de novo*. Its origin dates back to the time when India had a European force of her own, and for its service a recruiting station of her own at Warley in this country.

When the Company's European Army was abolished, the British Government made India pay not only for the British regiments supplied, but a proportion of the general recruiting charges at home.

Nothing has given rise to more frequent and long continued disputes between the two Governments from 1861 onwards; numerous committees and commissions have been appointed; the War Office and the India Office never agree, and as Sir Henry Brackenbury, who advocates the abolition of the charge, stated in evidence before us: "Nobody in India believes in the fairness of the capitation charges." 14,840.

If the Imperial Government were to forego this charge, it would be, firstly, the removal of a long-standing subject of contention between the Home and Indian Governments, that has caused much waste of time, temper, and money in the past, in constant inter-departmental negotiations, which, however settled for a time, always leave behind a permanent sense of unfairness and dissatisfaction in the minds of the Indian authorities and people.

It would further be the transference of a charge that is, in its nature, an Imperial and not an Indian charge, and that ought never to have been imposed upon India. The British Army is the army of the Empire. Of the British Army 74,000 men are permanently stationed in India, and are the symbol of British rule in that country. If India pays all their expenses whilst in her service, and all other charges for the military defence of India, she does everything that can be expected of her, and far more than is demanded from any other part of the Empire.

It would, lastly, be a substantial reduction of the military expenditure of India and a relief to the burdens of the Indian Exchequer, liable as it is to severe strains at uncertain intervals from famine and other unforeseen causes. It would be a recognition of the obligation (though perhaps not a complete one) which the United Kingdom owes to India for the effective part she bears in the military defence of the Empire at large.

Whether these specific proposals can be adopted or not, some readjustment of charge, going at least as far, seems to be essential in order to establish equitable financial relations between the two Governments. It is also of the highest political importance to endeavour to remove in a practical and substantial way the sense of harsh treatment, which has been given expression to by every Indian Government of the last generation, and which undoubtedly prevails in the minds of the Indian public.

T. R. BUCHANAN.

---

5. *By Sir Ralph Knox.*

I am in general agreement with this Report except with the recommendation to transfer from Indian to Imperial charge half the cost of transport with the troops between India and this country.

I should have preferred to have relieved the Indian Government of some of the excess cost of the occupation of new territories on the frontier, until such time as these countries became entirely self-supporting.

RALPH H. KNOX.

Report by Sir W. Wedderburn, Mr. W. S. Caine, and Mr. D. Naoroji.

MAY IT PLEASE YOUR MAJESTY,

WE, the undersigned Commissioners appointed to inquire into the administration and management of the military and civil expenditure incurred under the authority of the Secretary of State for India in Council or of the Government of India, and the apportionment of charge between the Governments of the United Kingdom and India for purposes in which both are interested, being unable to agree in the Report proposed to be submitted to Your Majesty by our colleagues in the Commission, desire humbly to submit this, our separate report, for Your Majesty's consideration.

2. If the inquiry directed by the Commission had not been of the importance which we consider it to be, seeing that it involves the welfare of over 250 millions of Your Majesty's British Indian subjects, or if the points of difference had been confined to matters of detail and had not extended to matters of principle, we might have felt disposed to acquiesce in the Report proposed by our colleagues. But, on careful consideration, we regret to find that the differences are important, and, in some respects, fundamental. We recognise the great ability and experience of public affairs possessed by our colleagues; but we have a duty to discharge, and we must attempt to do so to the best of our power.

3. At an early stage of the proceedings of the Commission the differences between our colleagues and ourselves became apparent. As regards Indian expenditure, they seemed to be of opinion that the Inquiry directed by Your Majesty's Commission was restricted to the mechanical working of the machinery by which civil and military expenditure incurred in India is administered and managed. While, upon the question of the apportionment of charge between the Governments of the United Kindom and of India, they held that the main duty of the Commission was to see how certain disputes relating to accounts, existing between the War Office and the Admiralty of Great Britain on the one hand, and the India Office on the other, could best be settled. We conceive that the reference of the Commission went far beyond this. (App. A.) It will be remembered that when the Motion of August 14, 1894 (on the determination of which this Commission was issued), was before the House of Commons, Your Majesty's then Secretary of State for India stated in the House that the question which he wished to consider was *whether the Government of India, with all its machinery as then existing in India, had, or had not, promoted the general prosperity of the people in its charge, and whether India was better or worse off by being a province of the British Crown.* That, he said, was the test; and these are the broad lines which, as regards expenditure, we consider that our inquiry should follow. Q. 16,500.

4. The scope of the Inquiry, as understood by our colleagues, did not, as it seems to us, require that the machinery of a Royal Commission should be resorted to to carry it out. It could have been done by departmental committees, and the inquiry by such means would not have necessitated the examination of witnesses, more particularly the examination of witnesses brought from India at considerable expense.

5. Besides this fundamental difference of opinion between our colleagues on the one hand, and ourselves on the other, as regards the scope of the Inquiry, we are unable to agree with them upon certain of the conclusions which they have arrived at as regards the three sections of the Inquiry into which they have divided their Report, viz.:—I. Financial machinery; II. Progress of expenditure; III. Apportionment of charge. We propose, therefore, in this Report to (A) briefly set forth the grounds on which we are unable to accept the conclusions of our colleagues; (B) state generally the principles upon which we think our decisions should be based; and (C) make certain practical recommendations under each of the three sections into which our colleagues have divided their Report.

A.—Grounds for differing from our Colleagues.

I.—*Machinery of Financial Control.*

Qq. 16,508, 16,528 16,535, 16,540.

6. In examining any machinery it is necessary, not only to consider the mechanical working of the several parts, but also to see that the mechanism is well designed as a whole for the purpose in view, and that it is constructed of the proper materials, and in such proportions as to produce the best results with the least cost and waste. So also as regards financial machinery. The Report of our colleagues admirably summarises the book-keeping and departmental mechanism; but does not, in our opinion, sufficiently consider whether the public expenditure has been so controlled and guided as to promote in the most effectual way the general prosperity of the people in the charge of the Government of India.

Q. 17,833.

7. Moreover, the Commission has before it valuable materials bearing on these broader considerations. A large amount of important evidence has been recorded on the subject of control over expenditure exercised in the interests of the taxpayers. Upon this point the evidence of the highest authorities, ex-Viceroys and ex-Finance Ministers, was obtained; but afterwards, when the Report came to be considered, and draft clauses were brought forward by one of us (Sir William Wedderburn) to give effect to certain recommendations of the witnesses, our colleagues considered that this all-important branch of the subject was outside the scope of the reference. We maintain that this was an erroneous view of the scope of the reference; for, looking at the Parliamentary debates out of which the Commission originated, it will be seen that no complaint was made against the book-keeping and departmental mechanism of the Government of India. The complaint was that the expenditure was excessive and ill-directed, and that there exists no effective machinery by which this expenditure is checked or controlled.

II.—*Progress of Expenditure.*

8. As regards this section, it appears to us that the conclusions arrived at by our colleagues are, in great measure, vitiated by certain underlying fallacies. Thus, it is stated, that the "growth of expenditure should, in the first place, be measured against "the growth of revenue, that is to say, against the normal increase of revenue indepen- "dent of changes in taxation;" but it is evident that a full understanding of the Indian Revenue system is necessary before one can attempt to decide so delicate an economic question as the normal growth of revenue; and by the terms of the reference the Commission was, as we conceive, precluded from making the inquiry necessary to obtain such understanding. An inquiry into the nature of the Revenue system was, indeed, asked for in the Resolution of August 14, 1894, but this request was distinctly negatived by Sir Henry Fowler, who decided that the reference should be limited to the question of expenditure.

9. If, however, an inquiry into the Revenue system was to be made, that inquiry should have been thorough and complete, to enable the Commission to make it the basis of important conclusions; but the inquiry that was actually made was imperfect and one-sided, for, in spite of emphatic protests, the Commission accepted as conclusive what the official witnesses declared to be the normal increase of revenue, without testing the correctness of their calculations, although these official witnesses were asked by one of us (Mr. Naoroji) to supply certain information by which their statements could be tested, and they failed to do so. It thus resulted that important factors were omitted from the calculations, as, for example, the additional heavy burden which, according to many competent judges, was imposed upon the taxpayers by enhancements of land assessment, by changes in abkári regulations, and by the closing of the mints, a proceeding which, in a disguised form, increased all taxation by above 30 per cent., this increase being most onerous in the case of land and salt.

Qq. 715–8, 736, 763, 1785–8, 10,966, 10,979.

10. Again, our colleagues' report lays down the principle that the growth of expenditure should be "analysed in its several branches in order to ascertain how "far the increase is normal and incurred in order to meet the needs of a civilised and "growing community, or how far it is abnormal and due to special causes." But in dealing with this question sufficient consideration has not been given to the fact that India, being under foreign domination and not a self-governing country, is not in a position to adjust increased expenditure according to increased growth and needs.

App. A., para. 12. App. B., paras. 48, 107, 118. Qq. 6580–3, 2309.

In the United Kingdom and in every self-governing State or Colony all the resources are at the command of the taxpayers, and the result is a sort of self-acting sliding scale, which regulates expenditure according to the needs and wishes of the people. There exists in such countries a normal economic condition; what is raised from the people returns to the people by the will of the people. But that is quite different in India, where there exists an abnormal economic condition; of what is there raised from the people a large portion does not return to the people. Also the taxpayers have no voice in the expenditure, and the increased expenditure is imposed to meet not so much the growing needs of the country as the ever increasing drain of remittances to this country. The causes of this increasing drain, and its serious political consequences, were well pointed out by Lord Randolph Churchill, as Secretary of State for India, when he said, "The position of India in relation to taxation and "the sources of public revenue is very peculiar, not merely from the habits of the "people and their strong aversion to change—which is more especially exhibited to "new forms of taxation—but likewise from the character of the government, which "is in the hands of foreigners, who hold all the principal administrative offices and "form so large a part of the army. The impatience of the new taxation which will "have to be borne wholly as a consequence of the foreign rule imposed on the "country, and virtually to meet additions to charges arising outside of the country, "would constitute a political danger, the real magnitude of which it is to be feared "is not at all appreciated by persons who have no knowledge or concern in the "government of India, but which those responsible for the government have long "regarded as of the most serious order."

Qq. 230–2, 1023. Qq. 12,025, 15,993, 18,638, 2299–300, 6611–13, 6581–83, 7517–19, 8172, 3200, 7524, 2302, 1145–6, 16,502, 18,620, 17,819, 2296. App. B., paras. 111, 112, 133, 138. App. A., para. 12.

11. With pain we must record our concurrence in this view, that the increase of Indian expenditure is a consequence of foreign rule, and is largely to "meet additions "to charges arising outside of the country." It is not that domestic needs are few or unimportant. On the contrary, the people of India have many urgent needs, which are clearly stated year by year in the Resolutions passed by the Indian National Congress. For example, they desire the separation of judicial and executive functions; they ask that the police and other subordinate establishments should be adequately paid; they need funds for sanitation and water supply; and they insist that they should have better facilities afforded for all kinds of education. No one denies that these demands are just; but they are resisted on the ground that there are no funds in the hands of the Government with which to give effect to them. On the other hand vast sums are found to meet the wishes of British capitalists for railway extension (*vide* Mr. Naoroji's letter to the Secretary of State, September 13, 1880, App. B., paras. 40, 86–96). And when on account of special circumstances an increase of establishment is sanctioned, or a new department is created, the principal benefit of that increase too often goes to officials imported into India from this country, and not to Your Majesty's Indian subjects. For example, a famine arises; and numbers of Europeans are given employment at high salaries, when respectable Indians could be found to do the work on much smaller salaries and with more sympathy and better knowledge of the people. The plague breaks out, and numbers of doctors and nurses are sent out from this country at great expense, displacing and discouraging the local doctors and nurses who have been bearing the burden and heat of the day.

Qq. 18,963–4. Qq. 4384–5, 17,680, 19,419. Qq. 17,674. Q. 9963–6, 9983, 9985, 17,691, 18,364–6, 19,645, 19,647, Vol. II., App. 29. Q. 7816, 7818–20. 1970, 8185–7, 8167–72, 8202, 9631, 12,205, 12,211, 17,502, 17,580, Vol. II., App. 27–8. Qq. 18,331, 18,333, 18,335.

12. For these and other reasons we consider that the tests applied by our colleagues are fallacious, and that due consideration has not been given to the test laid down by Sir H. Fowler, viz., Whether the result of this increased expenditure has been beneficial or not to the masses of the people.

III.—*Apportionment of Charge.*

13. In certain of our colleagues' recommendations, which we shall afterwards specify, we are glad to be able to concur; but, as already indicated, we find ourselves unable to accept the limited interpretation given by them to the reference, and the method by which the apportionment of charge has been arrived at. With regard to this important difference of opinion, it seems necessary to give our reasons a little more in detail. In the first place the language of the reference seems to us perfectly clear, as including every charge for purposes in which the Governments of the United Kingdom and India are both interested. There is no restriction of any kind, and it appears to us, therefore, that our colleagues have wrongly restricted the scope of the reference, when, with the exception of a part of the establishment of the India Office and some minor charges, they deal only with certain special matters in dispute

between the India Office on the one hand, and the War Office and the Admiralty on the other. This error, in our judgment, affects to a large extent the whole of the proceedings of the Commission. At our very first meeting it was suggested by some members that the apportionment clause of the reference had for its object only the settlement of the disputes between these three departments. Against this view Mr. Naoroji, the only native of India who was a member of the Commission, at once protested, and immediately afterwards, before any witnesses were examined, put in the statement (App. A.) pointing out that according to the terms of the reference, it was necessary to go into the question of the charge for all purposes in which India and the United Kingdom were jointly interested. Some light is thrown upon this point by the proceedings in Parliament out of which the Commission arose. The original Motion was directed generally to an inquiry into the financial relations between India and the United Kingdom, but in order to make the scope of the Motion more clear, Mr. Naoroji, on February 12, 1895, moved an amendment to the Address, praying your Gracious Majesty to "Direct your Majesty's Ministers to so adjust the financial "relations between the United Kingdom and British India with regard to all the "expenditure incurred in the employment of Europeans in the British Indian services, "civil and military, in this country and in India, that some fair and adequate portion "of such expenditure should be borne by the British Exchequer." To this part of the amendment Sir Henry Fowler gave ready assent in his speech, admitting that the subject was one "not undeserving of inquiry, and afterwards adding, "with reference "to the opinion expressed in the Amendment, that a fair and adequate portion of the "expenditure should be borne by the British Exchequer, we are quite willing that "such an Inquiry should take place, and we should be quite satisfied to abide by the "result." Accordingly in the Commission which was afterwards issued there are no restrictions; nor is there any reference to the particular matters in dispute between the India Office and other departments of the Imperial Government.

14. In passing we may, perhaps be allowed to say that Sir Henry Fowler, by recommending to your Majesty to grant this Commission, and by laying down a clear, wise, and full reference as prayed for has, according to our view, conferred a substantial benefit upon the Indian people.

Qq. 5345, &c., 5370, &c., 6622, &c.

Qq. 16,496 -7.

6612.

App. D., para. 34.

Qq. 9527–8, 6613.

App. E., paras. 48–50.

Q. 5345.

15. It was upon this view of the reference that Mr. Naoroji examined the witnesses and gave his own evidence, and also submitted detailed statements dealing with the matter in all its bearings (Appendix A to I), and we confess that it is with regret and surprise that we find our colleagues in their Report have ignored so much that is vital to the Inquiry. But even on their own ground we are bound to point out that a serious fallacy runs through their Report. In dealing with the dispute between the India Office on the one hand, and the War Office and the Admiralty on the other, they seem to assume that the Indian Government represents the India of the Indians, as though India were an independent country, having its own resources at its own command, and able to negotiate for its own conditions and terms. Arguments and conclusions based upon such an assumption must necessarily be fallacious. Mr. Gladstone once said, "It appears to me that to make such a statement—that the judgment "of the Viceroy is a sufficient expression of that of the people of India—is an expression "of paradox really surprising, and such as is rarely heard among us." It, therefore, appears to us that such terms as "Indian interests" and "Indian wants" are sometimes used in our colleagues' Report in a misleading sense. As a matter of fact the dispute above referred to is only between three departments of the Imperial Government, in which the people of India have no voice, the main point in controversy being the payment for the European troops, who, to use the words of the Government of India, "are maintained for the security of India not against domestic enemies or to "prevent the incursions of the warlike peoples of the adjoining countries, but to "maintain the supremacy of British power in the East." It is evident that expenditure of this sort is at least as much a British as an Indian interest.

16. In concluding this portion of the subject we would also submit that our colleagues have hardly given sufficient consideration to the aspects of the case as seen from the Indian point of view. The Commission decided to bring over at the public expense three non-official Indian witnesses from Calcutta, Madras, and Bombay, and we recognised with pleasure the steps taken by the authorities in India to secure for this important duty the services of gentlemen well qualified to speak on behalf of Indian public opinion. The fourth Indian witness was sent by a public body in the Deccan, at its own expense; and public meetings in Calcutta and elsewhere deputed a fifth witness to give evidence on the subject of the Indian medical service. Further,

Mr. Naoroji, who, as we have said, was the only native of India on the Commission, offered himself as a witness, and placed before the Commission a set of nine documents (App. A to I), setting forth in detail the case on behalf of Indians in its several aspects. Finally, evidence of a technical kind was given on behalf of the British Committee of the Indian National Congress by their late secretary, Mr. Morgan-Browne. Each of these seven witnesses before his examination placed in the hands of the Commission a concise written statement embodying the subject matter of his evidence; and upon these statements they were all carefully cross-examined by the Commission, some 3,770 questions being put to them.

Qq. 16,496–7.

17. Without desiring in any way to undervalue the evidence of the English officials who were examined before the Commission, we think that very great importance ought to be attached to the evidence of these independent Indian witnesses. They are in touch with the people, and they know the views held by their countrymen generally on the questions before the Commission, and the facts brought forward by them in support of their views are worthy of the most careful consideration. It is to us, therefore, a matter of deep regret that our colleagues do not seem to have given to this evidence the importance it deserves, their Report containing no reference to the facts and views put forward by Mr. Naoroji and the other Indian witnesses. For it must be borne in mind that, however trustworthy high English officials are personally, their opinions are those of a special class, and their information is in great measure derived primarily from ill-paid and untrustworthy subordinates; while the Commission has not been in a position to check or test this official information, as the Government of India has failed to publish facts and figures in the form required by Parliament, and recommended by its own Statistical Committee. For the particulars of these statistics we desire to refer to Appendix C. of our report.

App. C., paras. 3–5, 9–10.

B.—General Principles as Basis for Decision.

18. The objects of British rule in India, and the principles according to which it should be administered, have been clearly and repeatedly declared by the highest authorities, both by your Majesty personally and by British statesmen of foremost rank and distinction. For these declarations the people of India are deeply grateful; and we desire humbly to state our belief that if the principles there laid down are carefully followed, the result will be prosperity and contentment in India, with hearty attachment to British rule, and great material benefits to the British people themselves. It is by these principles that we seek to be guided in making our recommendations.

Qq. 13,642. App. A., para. 37. App. E., paras. 6–8. App. F., paras. 8, 9, 12, 14, 16. Qq. 16,499, 17,014.

19. First in importance comes your Majesty's gracious Proclamation of 1858, on assuming the direct administration of India. In that Magna Charta of Indian hopes your Majesty gave the people of India the following assurance:—"When, by the "blessing of Providence, internal tranquillity shall be restored, it is Our earnest "desire . . . . to administer its government for the benefit of all Our subjects "resident therein. . . . . In their prosperity will be Our strength; in their "contentment Our security; and in their gratitude Our best reward: And may the "God of all power grant unto Us, and to those in authority under Us, strength to "carry out these Our wishes for the good of Our people." Further, your Majesty graciously recognised in your Indian subjects the full rights of citizenship, with a due share in the honours and emoluments of State employment: "And it is Our further "will that, so far as may be, Our subjects, of whatever race or creed, be freely and "impartially admitted to offices in Our service the duties of which they may be "qualified, by their education, ability, and integrity, duly to discharge." The pledges thus given were confirmed on the assumption of the Imperial title in 1877 and at the Jubilee of 1887. Accordingly we conceive that, in making our report, our specific duty is to consider whether Indian expenditure has been so managed and administered as to fulfil your Majesty's gracious desire of promoting the prosperity of all your Indian subjects.

App. F., paras. 46–8, 115, 173.

20. The primary object desired by your Majesty being to secure the welfare of the whole of the people of India, we propose to cite a few of the leading authorities showing the means by which that object may best be attained. The most salient fact with which we have to deal is the extreme poverty of the masses in India. Sir Evelyn Baring (now Lord Cromer), when Finance Minister of India, said: "The tax-paying "community is exceedingly poor. To derive any large increase from so poor a

Q. 16,521. App. A., para. 19.

" population as this is obviously impossible, and, if it were possible, would be " unjustifiable." Sir Auckland Colvin, another Finance Minister, describes them as men " whose income, at the best, is barely sufficient to afford them the sustenance " necessary to support life, living, as they do, upon the barest necessaries of life."* Q. 2281. And Sir David Barbour, who also held the same office, has given evidence to the same effect. It seems, however, unnecessary to quote further authorities, as the destitution of the Indian masses is well known, and has become most painfully manifest by their helplessness in the presence of scarcity and famine. They have no store of food, money, or credit. Indeed, the great majority have less than nothing, being hopelessly in debt to the money-lenders. We may mention that the extreme poverty of India was brought specially before the India Office so long ago as 1880, when Mr. Naoroji submitted to Lord Hartington the statistics upon which his conclusions were based, and these were analysed by Mr. Danvers on behalf of the India Office. Extracts from this correspondence are given as Appendix B. Such being the condition of the people, it is evident that every effort should be made to secure economy in the expenditure. Qq. 2290–300. 4085, 4092. 4144–6, 4176, &c. This is the great central fact, which must be constantly kept in view. For, as long as it is difficult for the masses to keep alive, all demands for expenditure must be scrutinised with extreme rigour. Also petty savings here and there are useless. What is wanted is a reduction in the general scale of expenditure; and this, fortunately, is Qq. 16,540–1, 16,543, 16,548–52, 16,554, 16,556–8. possible in at least one direction; because at present so large a portion of the administration is carried on by costly European agency, which might advantageously be replaced by cheap but efficient agency obtained in the country. Such is the view taken by Sir William Hunter, who says: " You cannot work with imported labour as " cheaply as you can with Native labour; and I regard the more extended employment Qq. 2299, 18,331, 19,799. " of the Natives not only as an act of justice but as a financial necessity. . . . . " If we are to govern the Indian people efficiently and cheaply, we must govern Q. 16,528. App. A., para. 9. " them by means of themselves, and pay for the administration at the market " rates of Native labour." *This, in our judgment, is the key to the whole position.* The same view was expressed by the Duke of Devonshire, as Secretary of State for India, when he said: " If the country is to be better governed, that can only be done by the App. A., para. 8. " employment of the best and most intelligent of the Natives in the service." Lord App. E., para. 8. Iddesleigh, also, as Secretary of State for India, said: " If they were to discharge " their duty towards India, they could only discharge that duty by obtaining the " assistance and counsel of all who were great and good in that country. It would be " absurd in them to say that there was not a large fund of statesmanship and ability " in the Indian character." If that large fund of capacity was not properly utilised for employment in the higher grades of the service, Lord Lytton, as Viceroy of India, was of opinion that the fault was ours, for moving in a vicious circle: " We do not," he said, " employ Natives more largely because they are not well qualified, and they " are not well qualified because we do not employ them enough."† The employment of Indians in the higher grades has, from 1833, been the subject of legislation and many important debates and despatches; but as these are too voluminous to include in the body of our Report, we have given a historical summary of the question in Appendix F.

21. Now, as regards employment in the higher, as well as the lower, grades of the service, the law laid down in the Act of 1833 is that no Indian shall by reason only of his religion, place of birth, descent, or colour, be disabled from holding any place, office, or employment. And this equality of citizenship was fully affirmed in your Majesty's gracious proclamation of 1858, when it was declared that merit and capacity were to be the sole qualifications for employment. But we feel it our duty to point out that, while nominally on an equality, Indian subjects of your Majesty are under a great disadvantage in the open competitions through which entry into the higher grades of the service is mainly obtainable. The competitive examinations are held in London, and as they are conducted in English, Indian candidates are severely handicapped by the great distance and by the expense of visiting England, with the added difficulty of the language. The hardship thus inflicted upon young Indians desirous of a career in the service of their own country, was fully admitted by a App. F., paras. 43–9. Committee of five members of the Council of the Secretary of State for India, which in 1860 dealt with this question, and emphatically recommended that the competitive examinations should be held simultaneously in India and in England. This was the App. F., paras. 22, 23, 69, 70. view taken by the late Lord Derby, and by Mr. Fawcett; and it was approved by the House of Commons, which, by a resolution passed on 2nd June, 1893, recommended that " all open competitive examinations heretofore held in England alone for appoint-

* Income Tax speech, January 1886. † Life of Lord Lytton, by Lady Betty Balfour, p. 532.

ments to the Civil Services of India shall henceforth be held simultaneously both in India and England, such examinations in both countries being identical in their "nature, and all who compete being finally classed in one list according to merit." Unfortunately this resolution has not hitherto been put in force, and consequently effect has not been given to the principle affirmed by your gracious Majesty that there should be no disqualifications of race or religion, and that employment should be given on the sole ground of merit and qualification. Q. 19,414. App. F., paras. 179, &c.

22. Looking to the interests of the Indian taxpayer, there are besides several incidental advantages arising from the employment of Indians in the higher grades of the service. At present the lower grades of the service, in the police and other departments, are filled with an unsatisfactory class of men. This is so because their salaries are insufficient, and because they have no prospect of promotion to the higher grades. If there was this prospect of promotion, a better class of men would enter the subordinate grades, and the taxpayers would get better value for their money. Another incidental advantage to India from a larger employment of Indians in the higher grades is that the salaries and pensions would be spent, or saved, in India, tending thus to the accumulation of capital, instead of draining it away in great measure for the benefit of England. But, perhaps, the greatest advantage from this policy would be found in its influence upon the spirit of the administration. If educated Indians were employed, not only as hewers of wood and drawers of water, but in the higher offices of the State, they would be able, from their intimate knowledge of the people, and sympathy with their requirements, to give to the administration that fitness and elasticity, without which it cannot be efficient and economical. For these reasons we place the free employment of Indians in the higher grades foremost among the measures of reform necessary to make Indian expenditure conformable to the welfare of the masses, while we do not overlook the general benefits which will accrue from associating them in the higher responsibilities of our administration, and making them feel that British rule constitutes a truly national government. Qq. 19,419, 17,674. Qq. 7517, 7519, 7524, 16,548. Q. 19,799.

23. The above observations have reference principally to the civil administration. But the same considerations, both of financial economy and political advantage, hold good as regards military expenditure. The courage, discipline, and devotion of the Indian troops are beyond question,* and have received full recognition from the highest military authorities; and we believe that by admitting qualified Indians to the higher ranks of your Majesty's army, attachment to British rule would be fostered among the warlike races of India, while a new element of strength would be added, without increased expense, to the military position. For this purpose military colleges would be required in India, where Indians would be trained for a military career as commissioned and non-commissioned officers. A proposal to establish such colleges was, we believe, looked on favourably by His Royal Highness the Duke of Connaught.† In this connexion we may state our opinion that certain important advantages would accrue from a shorter term of military service for Indian troops, with the formation of a reserve force, enjoying a small pension. The reservists would feel themselves bound to be (according to Indian parlance) true to your Majesty's salt; and would spread a feeling of loyalty among their surroundings. An easy mode of increasing the numerical strength of the army on occasions of emergency would also be thus provided. We regret that the War Office, by excluding Indians from commissions in the British Army, appear to have laid down a rule inconsistent with the Act of 1833 and Your Gracious Majesty's Proclamation of 1858. The facts on this point are set forth in Appendix G. Q. 15,689. Q. 6593.

24. From what has been said above it will be seen that the principal means by which, in our opinion, a saving in expenditure may be obtained, is by strictly limiting the employment of costly imported agency, and by freely employing qualified Indians in all branches of their country's service. But in order to scrutinise current expenditure, and steadily enforce economy in the interest of the taxpayer, it is absolutely essential that representatives of the taxpayer should have a fair hearing in the various bodies by which Indian expenditure is directed and controlled. We shall, therefore, in our practical recommendations, make certain suggestions for a moderate representation of the people of India, in the Legislative (App. B., paras. 133–6) and Executive Councils in India, in the Council of the Secretary of State, and in the House of Commons. These Councils, both in India and in England, are filled with British officers of experience and distinction. But it is an old and accepted saying that no one knows where the shoe pinches but the wearer. And we are of opinion that these Qq. 4176, &c. Qq. 1145–6 Qq. 16,528, 16,138.

* Lord Curzon—*Times*, 8/11/1898. † Indian National Congress, First Report.

high officials would be much assisted in their responsible duties if they had an opportunity of hearing at first hand the views of an Indian, who naturally would be fully in touch with the people. Even when they held his view of a proposed measure to be mistaken, it would be useful to them to know in what light that measure appeared to the masses of the people whose interests were involved. In urging these concessions we are influenced by a desire to identify Indian interests with those of this country, thereby increasing the strength and solidarity of the Empire.

25. In concluding this part of the subject, as to general principles, we desire to draw special attention to the words of the Marquis of Salisbury regarding the merits of the system followed in well-governed Native States. He said, "The general concurrence "of opinion of those who know India best, is that a number of well-governed Native "States are in the highest degree advantageous to the political and moral condition "of the people of India." Similarly, Lord Iddesleigh said, "We should endeavour as "far as possible to develop the system of Native government, to bring out Native "talent and statesmanship, and to enlist in the cause of government all that is great "and good in them." These were not mere empty expressions of goodwill, for in the case of Mysore these two statesmen gave effect to their convictions, by restoring that State to Native rule under circumstances which secured the welfare of the people, and formed a bright episode in the history of British rule. (Appendix E.) It is our belief that, in accordance with these views, great benefit would result to British districts if, by a process of decentralisation, they were administered more after the model of a well-ordered Native State. The scale of expenditure would be much reduced, while the administration, being relieved from the rigidity of the great centralised departments, would be better able to adapt itself to special local needs and requirements, remaining at the same time under the complete control of the Indian Government.

C.—Practical Recommendations.

I.—Financial Control.

Qq. 17859–60, 19,073.

26. From 1883 to 1887 Sir Auckland Colvin held the office of Financial Member of the Viceroy's Council or "Finance Minister," as he is commonly called; and Sir David Barbour held the same office from 1888 to 1893. These two witnesses therefore can speak with authority as to the practical working, during this most important decade, of the machinery for controlling Indian expenditure; and they are both clearly of opinion (Q. 1833, 1930, 2909–11) that this machinery is defective, and that the Indian Administration does not give sufficient attention to financial considerations. In order to remedy this defect they are not prepared to put forward any definite scheme. But Sir A Colvin (Q. 3123) would look for the remedy in the direction (1) of strengthening the financial interests in the Council of the Secretary of State; and (2) of trying in some way, without undue interference with the authority of the Government of India, to establish a control emanating from Parliament as the ultimate authority. With reference to this second point Sir D. Barbour (Q. 2183) thinks that the general control of Parliament over Indian expenditure is most valuable, while he deprecates interference in matters of detail. As regards the method by which the control should be exercised he suggests (Q. 2235–7) that in dealing with Indian affairs Parliament should appoint a Select Committee from time to time to report upon particular questions, and he is of opinion that it is most dangerous for Parliament to interfere without first taking the report of a Select Committee or of some other special body.

27. The problem is thus presented to this Commission under two natural headings (*a*) control by the Secretary of State in Council, that is, official discipline; and (*b*) control by the House of Commons, that is, constitutional control; and the question is, how can the existing machinery be made effective as regards each of these headings? But before going into these considerations it seems desirable briefly to notice an unsuccessful attempt to adapt to the case of India the machinery which has been found effective in controlling Imperial expenditure. The control over Imperial expenditure is exercised under the provisions of the Exchequer Audit Act of 1866; and the Chairman (Q. 1841 and 1850) has pointed out that under that Act the Comptroller and Auditor-General by his Appropriation Audit, renders valuable service in two distinct directions; (1) he supports the Chancellor of the Exchequer, as head of the Treasury, by assisting him to maintain the orderly administration of the finances throughout the public service; and (2) he controls the Chancellor of the Exchequer by reporting to the

House of Commons any irregularity on the part of the Treasury, and the House of Commons through its Standing Committee pronounces judgment on such irregularity. It is evident that these two duties of the Comptroller and Auditor-General are not only distinct but also diverse in their aim and object. On the one hand he helps the financial head of the executive to enforce discipline upon all grades of the official hierarchy; and on the other hand he helps the House of Commons, representing the taxpayers to exercise constitutional control over the whole executive, and especially over the Treasury which controls all the rest. In other words the objects aimed at by the Act are those desired by Sir A Colvin and Sir D. Barbour, viz. (*a*) official discipline; and (*b*) constitutional control.

28. In England the system has been found to work well; and a printed correspondence has been placed before this Commission showing that between 1881 and 1893 an attempt was made to extend to Indian expenditure, *mutatis mutandis*, the benefits of the Imperial system of an Annual Appropriation Audit. But, unfortunately, sufficient account was not taken of the difference between the Indian and British systems of Administration; and the consequence is that the audit has been applied at the wrong place, with the result that (at considerable cost) a new and superfluous check has been imposed upon subordinate officials in India, while leaving untouched the vital problem of enforcing Parliamentary authority over the whole body of the Indian Executive. The error seems to have arisen from carrying too far the technical analogy between the Viceroy in Council and the House of Commons, as the authority which appropriates the supplies; and also the analogy between the Finance Minister in India and the British Chancellor of the Exchequer in England. The Financial Member of the Viceroy's Council is no doubt the financial expert, and he frames the Indian Budget; but for the purposes of the Appropriation Audit his position does not correspond with that of the Chancellor of the Exchequer. As regards the Appropriation Audit the Chancellor of the Exchequer is the central figure, not because he is the financial expert, or because he frames the Budget, but because he is the responsible head of the Treasury. And the responsible head of the Indian Treasury is not the Finance Member of the Viceroy's Council, but the Secretary of State for India in Council. To create, therefore, any constitutional control, the check should be applied at the point of contact between the India Office and the House of Commons. Instead of this, the report of the Indian Comptroller and Auditor-General takes effect several places down the official scale, somewhere between the Viceroy and the Financial Member of his Council, with this result, that instead of being a constitutional instrument (as in England) of the highest value, it evidently is of no value at all for such a purpose. And as regards official discipline, the day to day audit already does all that is required; so that Sir H. Waterfield and Mr. Jacob (Q. 949–957), Sir David Barbour (Q. 2250–1), and Sir A. Colvin (Q. 3107) all agree that as regards control of any kind the annual Appropriation Audit Report in India is of no practical use at all. Indeed Sir D. Barbour goes so far as to say (Q. 2156) that he found the Appropriation Report "rather troublesome," as being merely a "rehash" of questions disposed of twelve months before. This supposed check, therefore, as at present applied, is illusory, and mischievous, as tending to create a false sense of security. Nor does it appear that any practical advantage could be gained by submitting an Indian Appropriation Audit Report to a Committee of the House of Commons as the House (Q. 1118–9) does not vote or sanction the Indian Budget, and has no interest or responsibility in seeing that its provisions have been complied with. Also (Q. 966) it has been pointed out that a Committee of the House could not deal with the technical details of such a report without explanation from officials whose duties keep them in India.

29. From these considerations it seems clear that, although the objects to be attained are similar, the British machinery of an Appropriation Audit is not suited to the peculiar conditions of Indian administration, where the authority which sanctions the budget, and the authority which ultimately makes the expenditure, is one and the same, viz., the Indian Executive. For them the budget is not a binding instrument; it is only a voluntary expression of anticipated expenditure, which they can afterwards abide by or not, according to circumstances and their own discretion. If the ultimate expenditure does not correspond with the original anticipation, it may be a matter for criticism, but is of no constitutional importance. We cannot, therefore, support the proposal referred to in para. 89 of our colleagues' Report, regarding the appointment of a Comptroller and Auditor-General; and we must fall back upon the suggestions (noted above, paras. 26 and 27) of the expert witnesses, as regards (*a*) control by the Secretary of State in Council, and (*b*) control by the House of Commons; and, looking

to the actual conditions of Indian finance, consider how best the machinery can be made effective under each of these headings. The first important point to be borne in mind is that, the administration of India being purely official, there is a strong natural tendency towards increasing expenditure. Each official, seeing within his own sphere great opportunities for useful public expenditure, is eager to obtain the necessary funds, while he has no occasion to consider the effect of such demands in the aggregate upon the public treasury. And the financial danger arising from this tendency has very much increased owing to the increasing power of great centralised spending departments: these are highly organised and ambitious, and each of them being represented in the Executive by some member of the Viceroy's Council, their combined pressure is brought to bear (Q. 1928) upon the Financial Department, which is expected to find the ways and means. Now as against this general and continuous pressure towards expenditure, what are the checks tending to economy? Speaking generally, it may be said that the only permanent check upon public expenditure arises from the unwillingness of those who have to provide the funds. This check may be direct and absolute as in this country where the money is doled out by the representatives of the taxpayers; or it may be indirect and remote, as in India, where the taxpayers have no voice in the matter of supplies, but where their feelings indirectly influence the Finance Minister, who has to propose and justify the taxation by which the funds are provided. A similar but less personal instinct towards economy may ordinarily be assumed to exist in the Viceroy and the Secretary of State, who are responsible for the general peace and contentment of the Indian taxpayers. Finally there is the House of Commons, which somewhat remotely, on behalf of the British taxpayer, has an interest in economy, on account of contingent liability for the solvency of India. How, according to the evidence recorded, do these influences towards economy now operate in practice, as regards (1) the Viceroy in Council; (2) the Secretary of State in Council; and (3) the House of Commons? And how can they be so strengthened and organised as to constitute an effective control upon expenditure?

30.—(1) *The Viceroy in Council.* Under this heading an important factor (Q. 1856 and 2923) is the great power of the Viceroy as the head of the Government in India. He is in constant confidential communication with the Secretary of State, of whose support he is practically assured; the professional prospects of his colleagues are very much in his hands; and he has the distribution and ordering of the business. If therefore he actively supports the Finance Department in its efforts at economy, that department will prevail; but, if he supports the military or other great spending department, the Financial Department is practically helpless. Unfortunately also (Q. 2957) the decentralisation scheme, which gives to provincial governments charge of internal progress, has weakened the inclination of the Viceroy towards economy by tending to engage his personal interest in foreign, military, and railway matters which involve large expenditure. If the Viceroy is a man trained to public life in England, he will be more fitted to resist the influence of his official surroundings; and if he communicates freely with the non-official members of his Legislative Council, he will be better able to hold the balance among contending interests. But, in any case, it appears that the personal disposition of the Viceroy must always remain both a preponderating and an uncertain factor in determining the financial policy of the government. Next, in importance, comes the Finance Minister, whose professional bias is decidedly in favour of economy. But, as a member of the Viceroy's Council, he is only one of seven, including the Viceroy, and, as all his colleagues are more or less interested in spending departments, he is at all times liable to be out-voted. Also (Q. 2924) within the last ten years, since the establishment of Russian authority in Central Asia his power of control has been radically affected owing to the great preponderance given to military considerations, in consequence of the apprehensions of British officials in India. It must further be admitted that his position as an advocate of sound finance is seriously weakened by the fact that, as Financial Member of Council, he must bring forward in his Budget, and defend, the financial proposals approved by the majority of his colleagues, even although they do not entirely commend themselves to his judgment. He may, therefore, as the mouthpiece of the Government, find himself obliged to controvert arguments in favour of economy brought forward by non-official members, when personally he may be inclined to agree with them. And this point brings us to consider the position of the non-official members of the Viceroy's Legislative Council, who, so far as they represent the Indian taxpayers, may be regarded as a continuous influence tending towards economy. Under the Indian Councils Amendment Act, 1892, the non-official members are

Qq. 17,979–80.

Q. 17,081.

Q. 18,005.

Q. 18,028.

nominated by the Viceroy, partly on the recommendation of certain representative bodies in India, and they have the power of discussing in the Council the provisions of the Budget. But the check thus provided upon expenditure would be exercised with much greater effect and sense of responsibility if, as proposed by the late Mr. Bradlaugh, the non-official members were more directly representative of the Indian taxpayers; if they were empowered to move amendments and take divisions upon the various provisions of the Budget, which should be passed item by item; and if the points raised by them were brought formally under the cognisance of the India Office, and afterwards of Parliament. Qq. 19,156, 2305, 2308, 17,147–9, 18,008, 17,397, 19,134, 19,142, 19,090–1, 19,095.

31. It is true that Lord Cromer, Lord Northbrook, Lord Ripon, Lord Lansdowne, and Lord Roberts, did not support the complaint made by Sir A. Colvin and Sir D. Barbour as to the weakness of the Finance Minister's position. But the value of this objection is largely discounted by the fact that Lords Cromer, Northbrook, and Ripon had no personal experience of the altered condition of things since the Russian advance about 1885; while Lord Lansdowne and Lord Roberts were themselves responsible for developing the frontier policy which caused the weakness of the Finance Minister's position.

32.—(2.) *The Secretary of State for India in Council.*—Sir D. Barbour (Q. 1853–5) states that the Secretary of State is a friend of the Financial Department, that is, of economy; and Sir A. Colvin confirms (Q. 2935–6) this view of the case, except that (Q. 3165–7) he says that the Secretary of State stimulates expenditure on railways. Further Sir D. Barbour desires that the Secretary of State should be a stronger friend to economy than he now is; and Sir A. Colvin (Q. 3123) wishes the financial interests in his Council to be strengthened. How are these objects to be attained? Under the Government of India Act, 1858, the consent of the members of the Secretary of State's Council, commonly called the "Indian Council," is necessary for expenditure; but the value of this check must depend very much upon the personal inclination of these members; and, unfortunately for the cause of economy, the Council is mainly recruited from the official class which has previously represented the spending departments in the Viceroy's Council. Financial interests at the India Office would no doubt be strengthened if at least one seat in the Council were invariably reserved for retired Indian Finance Ministers. But what is wanted in order to keep the question of economy continuously before the India Office is the presence there of some more direct representatives of the Indian taxpayer. It will be remembered that Mr. Disraeli in his original scheme for an Indian Council proposed that four seats should be reserved for members elected by a "Special Indian Constituency." And India has made great progress since then, so that men could easily be found there whose ability and experience would be a source of real strength to the Council of the Secretary of State. Another weak point which requires attention is this, that although a member of the Indian Council can record a dissent, such dissent (Q. 3179) is neither published nor (Q. 2946, 3181–2) communicated officially to the Finance Minister in India. The check, therefore, intended to be imposed upon expenditure does not operate either as regards the Executive in India or as regards the House of Commons, which does not know that such a dissent has been recorded. Indeed, the Government appears to claim the right to withhold all such knowledge from Parliament, for recently in an important matter it refused to place a Minute by a member of the Indian Council upon the Table of the House of Commons. Further, it is complained (Q. 1887–9) that the Finance Minister in India is not in touch with the authorities in England, and that he is very much in the dark as to the policy of the Secretary of State, although he obtains a certain amount of information (Q. 2946–7*a*) by private correspondence with members of the Indian Council. This want of touch involves considerable loss of power; and it seems desirable that there should be some arrangement for systematically combining the action of these various authorities, and focussing their attention, at least once in the year, upon the condition and prospects of Indian finance. Q. 17,988. Q. 17,896. Qq. 17,822, 19,160.

33.—(3.) *The House of Commons.*—Sir H. Fowler's declaration that all the members of the House of Commons were "Members for India" was received with enthusiasm; so we may assume that there exists in Parliament a sense of duty towards the Indian taxpayer. But it must be admitted that the promptitude and rigour with which the House, assisted by a Standing Committee, scrutinises British expenditure for weeks together, contrasts unfavourably with the belated and casual proceedings in the case of India, one evening in the year being grudgingly given to discuss the intricate finances

of the whole Indian Empire. Sir A. Colvin (Q. 3173) points out that this annual debate takes place long after the period to which it refers is closed, at the end of the Session, when everyone is very anxious to get away, in a very thin House, and among persons many or most of whom are neither competent nor careful to weigh the matter they are discussing. This debate never takes place before August. In the Session of 1895, it took place in November, and the accounts dealt with by the resolution of the House were for the year ending March 1894. No preliminary investigation into the accounts is made by any Parliamentary Committee; and under all these circumstances we cannot wonder that the witnesses (Q. 2239–49) agree that for purposes of control this annual debate is practically of no value. As regards British expenditure the Chairman (Q. 1934) has pointed out that the unsparing criticism of the party in opposition is the special force which gives effect to financial discussions. But in the case of India this party criticism is absent, the occupants of the opposition front bench usually limiting themselves in this annual debate to compliments addressed to their successors in office. The duty of criticism is thus thrown upon a few independent members, who, as regards Indian questions, have no constituents behind them, and who have the greatest difficulty, by questions and motions for returns, in extracting the facts and figures necessary to test the validity of the official statements which are naturally of an optimistic kind. How the control of Parliament can thus be rendered nugatory has been strikingly illustrated with reference to section 55 of the Government of India Act, 1858, which requires the consent of both Houses of Parliament for the expenditure of Indian revenues on military expeditions beyond the frontier. The evidence has made it abundantly clear (Qq. 2267-9, 2912, 3260–1) that the chief Indian expenditure needing control is the military expenditure, and especially, within the last ten years, that connected with frontier expeditions. It is, therefore, of the highest importance to know where the frontier is; whether these expeditions have been beyond the frontier; and if so, whether the previous sanction of both Houses has been duly obtained to the expenditure of Indian revenues. Yet, in spite of continuous questioning in the House of Commons, it has been found impossible to extract from the Government of either party any definite information on these important points; the demand for maps showing the frontier, as it stood from time to time, has been refused or evaded; and no answers are forthcoming as to the steps taken legally to incorporate in British India the various frontier territories acquired since the passing of the Act of 1858. Until the salary of the Secretary of State for India is placed upon the estimates, it will continue impossible to compel him to supply the information absolutely necessary to enable the House of Commons to perform its duty to India, and to itself. In the meantime (Qq. 2266, 3191) the question of the legality of this frontier expenditure does not appear to have received the consideration of the Government of India.

Qq. 18,001–2.

Qq. 19,085, 19,090.

34. Such being the existing machinery for the control of Indian expenditure, what practical recommendations can be made by this Commission to cure the defects now brought to light, and to establish a system which will (*a*) strengthen and organise the influences throughout the Indian administration making for sound finance; and (*b*) enable Parliament to exercise effective control as the ultimate authority? In order to make the annual Parliamentary review of Indian finance a reality, it is necessary to give a judicial character to the proceedings. And for this purpose the House of Commons must hear both sides, that of the taxpayer as well as the official; it must have definite issues upon which to pass judgment; and it must give sufficient time and care to the consideration of the facts. At present these conditions are wanting. And to supply the deficiency the following summary of proposals is submitted:

Qq. 19,186, 18,007, 18,767, 17,147.

That each year, as soon as may be after the Budget has been passed at Calcutta, the House of Commons should appoint a Select Committee to enquire into, and report without delay upon the financial condition of India, as shown in the Budget and the accounts of the two previous years;

That the materials for this enquiry should consist *inter alia* of (1) the debates upon the Budget in the Viceroy's Legislative Council and any dissents recorded by members of that Council, (2) a despatch from the Viceroy in Council, including a special report by the Finance Minister, on the financial position, and (3) a financial statement by the Secretary of State in Council, with any dissents recorded by members of that Council;

That, in order to give the Indian taxpayer an opportunity of making his voice heard, the non-official members of the Viceroy's Council should (1) be made more directly representative of the Indian people, and (2) should have the right to

move amendments and divide the Council upon the provisions of the Budget, while (3) a sufficient number of representative Indians of position and experience should be nominated to the Council of the Secretary of State on the recommendation of the elected members of the Viceroy's and Local Legislative Councils.

It is also desirable that there should be at least one Indian in the Executive Council of the Viceroy.

35. In order to maintain the controlling authority of the House of Commons over Indian expenditure, the salary of the Secretary of State for India should be placed upon the British Estimates.

36. In the time of the East India Company a Parliamentary enquiry into the whole administration of India was held every twenty years, before the renewal of the Charter. From these enquiries date the most important reforms for the benefit of India. Also the prospect of such an enquiry tended to check abuses. This old practice should be revived by statute. Q. 19,167, 16,481, 19,185.

37. At present, owing to the frontiers of India being undefined, it is difficult to give effect to the provisions of section 55 of the Government of India Act, 1858, as to expenditure beyond the Indian frontier. The frontiers of India should, therefore, be defined by Parliament, and should not be altered without the authority of Parliament. Q. 18,015.

II.—Progress of Expenditure.

38. We cannot accept as an accurate presentation of the facts the summary review of Progress of Income and Expenditure set out in paras. 95 to 115 of our colleagues' Report. In our opinion not only are the methods of dealing with the accounts adopted in that review faulty, but many of the estimates upon which are founded the conclusions arrived at are unwarranted by the facts. As the figures, estimates, and comparisons contained in paras. 95 to 115 of our colleagues' Report are the foundations upon which are built the detailed observations and the final conclusions of that Report; and as, moreover, from the treatment of these summary figures, which are comparatively easy to trace, may be deduced the treatment of more detailed figures in the body of the Report less easy to trace; we think it desirable in the first instance to set out some of our main objections to this review of Income and Expenditure, and also to give one or two instances of actual error in the treatment of the figures. In this connexion we wish to comment, more particularly on the following matters:—

(i.) The selection of the year 1861–2 as a starting point in the review of Indian Finance.

(ii.) The sense in which "net revenue" has been used.

(iii.) The treatment of Land Revenue.

(iv.) The treatment of Provincial Rates.

(v.) The character of some of the estimates adopted.

(vi.) The want of uniformity in dealing with the figures.

39. The adoption of the year 1861–2 as a starting point for any comparative review of Indian Finance is open to grave objection.

The chief authorities deprecate making comparisons between accounts separated by the year 1875–6. Mr. Stephen Jacob gave evidence as to the impossibility of making a fair comparison of the expenditure of years prior to 1875 owing to different methods of keeping the accounts. Sir Henry Waterfield's statement of accounts put in before the Commission begins with the year 1875–6. And we have been informed by the authorities of the India Office that we cannot rely, for purposes of comparison, upon the figures showing the expenditure of the various departments for years earlier than 1875–6. Questions 4,199–208. Appendix 9, Vol. II., p. 59.

Under these circumstances it would appear to be doubtful whether any value attaches to even a general review of income and expenditure, beginning with 1861–2, in which comparisons are made between that year and years subsequent to 1875–6. Assuming, however, any such general review to be desirable, the review in our colleagues' Report, with its specific determination in percentages of the elasticity of

the net* revenue, of the increase in naval and military expenditure, and in the cost of civil administration, would appear to run counter to the expressed opinions of authorities like Mr. Stephen Jacob and Sir Henry Waterfield.

40. Apart from these larger considerations the financial year 1861–2 was an abnormal year, still under the influence of the Mutiny Budgets. Mr. Laing, in opening the Budget of 1862–3, said: "The circumstances of the last Budget "(*i.e.*, 1861–2) were remarkable." But not only was Indian finance still showing the effects of the great mutiny, but apparently the actual accounts at that period were in a state of extraordinary confusion. During the early months of 1862 Sir Charles Wood, the Secretary of State for India, wrote, on more than one occasion, criticising adversely the estimates and accounts of the Government of India. Under date, London, June 9, 1862, he writes:—

P. P. 354 of 1862, pp. 56, 81–9.

> 7. In endeavouring to obtain from the statements forwarded by you a clear view of the finances of each year, and to satisfy myself as to the accuracy of the conclusions at which you have arrived, and the expediency of the measures which you have adopted, I have experienced much inconvenience from the changes which have been made in the general headings of the statements and estimates of revenues and charges.
>
> 11. I must call your attention to the great want of care which is apparent in these statements.
>
> 26. I proceed now to the consideration of the estimates for the year 1861–2.
>
> 29. There are, however, items of expenditure omitted, which I consider it necessary to add, and the addition of which will, I am sorry to say, materially alter the financial result of the year, as shown in both the Budget and Regular (*i.e.*, Revised) estimates received from your Government.
>
> 54. I have now to refer to the course which your Government has pursued in these two years (1861–2 and 1862–3), acting on the erroneous views of the finances stated by Mr. Laing.

It would appear from the correspondence that some of the accounts and estimates appearing in Parliamentary Paper No. 354 of 1862 were not accepted as correct at the time by the highest authorities in the Government of India, the Secretary of State and his advisers at the India Office. Yet it is precisely from these discredited accounts and estimates that the quotation in para. 96 of our colleagues' Report is taken.

41. We have reason to know that the accounts of 1861–2 and other years were subsequently re-cast and printed in a book known at the India Office as the Green Book. But neither with these figures, nor with those in the accounts of the Government of India at the time, nor with any published accounts in our knowledge, do many of the figures given in our colleagues' Report relating to 1861–2 agree. We would also observe that the Commission has had no opportunity, sitting as a body to receive evidence, of testing the accuracy or the appropriateness of the figures relating to 1861–2 incorporated in the report. They were not in evidence, and we have no official knowledge of their source. The present system of keeping the Indian accounts dates from 1884–5; but an appendix to the Financial Statement for 1886–87 gives the figures for the years 1875-6 to 1884-5 re-cast in the present form. These figures, we submit, are the only safe basis for a review of Indian Income and Expenditure during these years, and by reason of the fact that the re-casting of the accounts in their present form has never been carried back beyond 1875-6, preclude profitable comparisons with previous years.

Financial Statement 1886–87, Parliamentary Paper 172 of 1886, p. 5, and App. III.

42. The use of the term "net revenue" to mean revenue less cost of collection, as is done in our colleagues' Report, is open to serious objection. Net revenue properly

* Arrived at after deducting from the revenue charges for collection, contrary to the accepted practice of modern authorities.

means, as accepted by the best authorities to-day (*vide* Sir H. Fowler's Returns for England and India, and recent Statistical Abstracts), all money taken from the taxpayers, or acquired by the Government in commercial undertakings, or received in the way of interest on investments, after deducting the amount actually returned to the taxpayer,—*e.g.*, in drawbacks or refunds,—the working expenses and interest on capital involved in the commercial enterprises of the Government, and certain cognate sets-off under the head of interest on money temporarily borrowed. The cost of collecting the revenue includes a large part of the salaries of Government officers, and such expenditure should not thus be withdrawn from a general purview of an increase in expenditure.

Thus, according to the figures adopted in the Report, the charges for collecting the revenue were as follows for the years 1861–2 and 1895–6:— Para. 105. Para. 130.

	Rx.
1861–2 - - - -	5,857,000
1895–6 - - -	10,351,000
Increase - -	4,494,000

Obviously such additional cost of collection, if treated as a set-off to revenue raised, conceals the true rate of increase in the revenue between the two periods, and would bring about an actual understatement of the increase in the revenue during a given period.

There are other serious objections to deducting the so-called cost of collecting the revenue in order to ascertain the so-called net revenue.

1. The allocation of the charges between cost of collecting the revenue and civil administration has varied from time to time.

2. The amounts charged to collection of revenue are not regarded as correct by some authorities. Note Mr. Jacob's views referred to in para. 133 of the report. Compare also para. 137 of Report at p. 52.

3. These charges do "not include the furlough and the non-effective charges of the revenue service." They are, therefore, incomplete in themselves, and do not represent accurately what they profess to be. Para. 132 of Report, p. 49.

43. One of the principal deductions founded on the Review of Indian Income and Expenditure in paragraphs 95–115 of our colleagues' Report appears to be that the Indian revenue is a strikingly elastic revenue. In this connexion we must enter a protest against the assumption, made throughout the investigation of this alleged elasticity, that the opium revenue is tax revenue, although it is in no sense a burden on the people of India, and that the whole of the increase in the land revenue is evidence of this elasticity, whereas it is largely due to the enhancement of assessments at the periodic revision of land settlements.

Thus with regard to opium it should be noted in para. 105 of our colleagues' Report that in arriving at the estimate of Rx. 8,089,000 as representing elasticity of revenue during twenty-three years, "opium" has been wrongly treated as taxation. Consequently, this total includes nearly Rx. 1,600,000, or some twenty per cent. of the whole, having no relation to elasticity of tax revenue, which is the objective of the investigation at this point.

	Net Opium Revenue. Rx.
(Green Book) 1861–2 - - - -	4,898,505
Average 1883–84 and 1884–5 - - - -	6,470,000
Increase -	1,572,495

44. With regard to the increase in the land revenue there are one or two very striking facts which appear to call for consideration. It is not contended that these facts inevitably point one way, but it is suggested that they throw the burden of proof on those who assert that the large increase of land revenue in recent years is not an increase of taxation.

Reviewing, as far as the figures published in successive Statistical Abstracts will allow, the period 1875–6—1895–6, taking 1885–6 as an intermediate point, the following facts appear to be relevant to the question at issue: —

Stat. Abst.

	Rx.
Land Revenue (gross) 1875–6	21,540,000
" " " 1885–6	22,590,000
" " " 1895–6	26,200,000
Increase 1875–85	Rx. 1,050,000 or 5 %
Increase 1885–95	Rx. 3,610,000
Deduct for Upper Burma	750,000
Corrected Increase 1885–95	Rx. 2,860,000 or 13 %

F. S. 1897, p. 41 (P. P., No. 193).

Here, then, is a remarkable difference between the rate of increase in the two periods. It should be noted that so far as the receipts from land tax are an indication, India had recovered from the great famine of 1877 by the end of the financial year 1878–9. The varying rate of increase happens to coincide with a varying prosperity in the finances of the Government of India; a remarkable feature of this variation being that when the general finances were most prosperous the increase from land revenue was less, and when the general financial situation gave cause for grave anxiety, the increase from land revenue was much more. The former period was one of "financial prosperity" "happy in reduction of taxation"; the latter period was one of financial disturbance, "marked by increase of taxation." In the one case Government was remitting taxes, in the other case Government was casting about for fresh sources of revenue. Would not this state of things influence the policy of land assessment at settlement revisions?

Stat. Abst.

Para. 101 of Report, p. 33.

45. Another remarkable contrast is afforded by a comparison between the relation of increase of area actually cropped to increase of land revenue. Statistics before 1885–86 are not available, and even for that year the figures for Bengal and Ajmere (these latter quite unimportant) are wanting. The area actually cropped in British India (excluding Bengal, Upper Burma, and Ajmere) in 1885–86 and 1895–96 respectively, was as follows :—

Stat. Abst. 1887, p. 53.
Stat. Abst. 1897, p. 140.

	Acres.
1885–6	128,250,000
1895–6	132,500,000
Increase in area actually cropped	4,250,000 or $3\frac{1}{3}$ %

For the same years the gross land revenue for British India (excluding Bengal and Upper Burma) was as follows:—

Stat. Abst. 1897, p. 93, and F. S. 1897, p. 41.

	Rx.
1885–6	18,750,000
1895–6	21,550,000
Increase in revenue	2,800,000 or 15 %

There are complications of irrigation, current fallows, and double cropping which may to some extent account for the apparent repugnance between the two percentages, but *primâ facie* the figures suggest that the increase of 15 per cent. in the land revenue should be apportioned as to $3\frac{1}{3}$ per cent. to increased cultivation and as to $11\frac{2}{3}$ per cent. to enhanced rates of assessment, *i.e.*, to increased taxation.

46. There remains the most suggestive contrast of all: and that is the contrast between the rate of increase in the land revenue of Bengal (where the permanent settlement prevails) and that for the rest of India (excluding Upper Burma) which is subject to periodic revisions of land assessments.

Land Revenue (Gross).

BENGAL.

1875–76.	1885–86.	1895–96.		
Rx. 3,788,000	Rx. 3,856,000	Rx. 3,905,000		Stat. Abst.
			%	
Increase 1st 10 years - - - -		68,000	1·8	
„ 2nd „ - - -		49,000	1·3	
Increase 20 years - - - -		117,000	3·1	

BRITISH INDIA.

(Excluding Bengal and Upper Burma.)

1875–76.	1885–86.	1895–96.		
Rx. 17,750,000	Rx. 18,750,000	Rx. 21,550,000		Stat. Abst.
		Rx.	%	
Increase 1st 10 years - - -		1,000,000	5·6	
„ 2nd „ - - -		2,800,000	15·0	
Increase 20 years - - - -		3,800,000	21·5	

It is suggested that the facts indicated by these three contrasts call for careful examination; and that until they have been examined and explained estimates of revenue elasticity based *inter alia* upon the classification of all increase in land revenue as increase not due to an increase of taxation, have but small statistical value.

47. It is not quite clear upon what grounds a distinction is drawn between new taxation in the form of "Provincial Rates" and any other form of new taxation. No evidence has been adduced before us to show that these Provincial Rates were ear-marked to meet a special new expenditure, and reserved for that purpose alone. Their allocation to Provincial Governments was only part of a general scheme of partial financial devolution. In the form in which the accounts are kept to-day there is no special head of expenditure corresponding with this special head of revenue. In fact, Provincial Rates would appear to be one of the principal sources of revenue raised towards meeting the general expenditure. Increase of expenditure is generally due to policy of some kind, but no reasons appear to be adduced why the special policy of developing provincial finance, in so far as it led to increased expenditure, and, as a consequence, to increased taxation, should be removed from a general survey of the financial situation. It is obvious that if we include "Provincial Rates" the taxation of 1883–4 and 1884–5 was heavier than that of 1861–2; and it would follow that it would no longer be correct to state as is done in para. 102 of our colleagues' Report, that— Para. 102 of Report.

> the burthen of taxation . . . . at the close of the period [1861–1884] did not greatly differ from that which prevailed before the Crown undertook direct responsibility for the government of the Indian Empire. Report, p. 33.

This distinction is also drawn in para. 109 at p. 39 of our colleagues' Report, and to that extent helps to vitiate the conclusions there arrived at.

48. So far we have indicated our objections to the review of Indian Finance contained in paras. 95–115 of the Report on general grounds. We have, however, other and more specific criticisms to pass upon the manner in which the figures have been dealt with. We venture to give one or two illustrations taken from this part of our colleagues' Report.

49. In para. 103 (pp. 34 and 35) it is estimated that in 1882 the salt duty was reduced as nearly as circumstances permitted to the level of the duty before the Mutiny. At the top of page 36 the amount of remission of taxation under the head of salt in 1884–5, as compared with 1861–2, is estimated at Rx. 1,400,000, which was the estimated loss to the revenue made by Sir E. Baring in 1882, with reference to his reduction of the duties prevailing in 1881 and had no reference so far as we

can gather from contemporary documents, to a reduction of the salt duties as from 1861–2. Now this estimate of Sir E. Baring's may, of course, be accepted, so long as it is used in the sense in which Sir E. Baring meant it to be used. A reference to the "Moral and Material Progress, &c., of India, 1882–83," p. 157, will show clearly to what Sir E. Baring's estimate refers. A table there shows the rates of salt duty prevailing in 1881–2 (the year before Sir E. Baring's reduction of the duty) and that in 1882–3 (when the reduction came into effect). From this it will be seen that the reduction of 1882–3 in Northern India, Madras, and Bombay (consuming over 60 per cent. of the salt taxed in India) was from 5*s.* = 2½ Rs. = 40 annas to 32 annas and in Bengal (consuming over 30 per cent. of the total salt) from 5*s.* 8*d.* = 45 annas to 32 annas. These were very different rates to those prevailing in 1861-2 as given in a footnote to page 64 of the Report.

. P. 289 of 385, p. 157.

The following table will show clearly the magnitude of the miscalculations involved.

RATES OF SALT DUTY PER MAUND.

—	1861–2. The Basis of Comparison in the Report.	1881–2. The Basis of Sir E. Baring's Estimate of Reduction.
	Annas.	Annas.
Bengal	52	45
Bombay	20	40
Madras	20	40
N.W.P.	48	40
Oudh	48	
Punjab	48	

'ee P. P. 39 of 1885, . 157, and eport, . 34, foot-ote.

Obviously an estimate based on a reduction from rates ranging from 40 to 45 annas is not applicable to a change from rates ranging from 20 to 52 annas.

at. Abst.

50. So far as a comparison between the rate of Salt Duty before the Mutiny and that prevailing in 1884–5 is implied, we venture to point out that the consumption of salt in Madras and Bombay combined being a constant of about 35 per cent. more than in Bengal (although the population of the latter is greater), it would follow that an increase of duty of about 150 per cent. (from an average of 13 annas—the rate in Madras and Bombay in 1858—to 32 annas) on the larger consumption, must very considerably "overbalance" the reduction of duty by 20 per cent. (from 40 annas—the rate in Bengal in 1858—to 32 annas) on the smaller consumption. We submit, therefore, that there is no warrant for the conclusion reached in our colleagues' Report (p. 34) that the Salt Duty in 1882 was "reduced . . . . . as nearly as circumstances permitted to the level of the duty before the Mutiny."

51. It would be beyond our province here to criticise in detail the various estimates contained in this part of our colleagues' Report, but we would briefly refer to two other instances in which, we submit, the best available data have not been used in arriving at the figures given in the general review of income and expenditure. These, with the illustrations quoted above (paras. 49 and 50), will serve to explain why we cannot accept those estimates in whole or in part. These two instances we take from the review of the period 1884–5 to 1895–6, and relate to salt and Customs.

52. With regard to salt, in para. 108 of our colleagues' Report at p. 38, the increase due to the increase in the duty in 1895–6 as compared with 1884–5 is estimated at Rx. 1,500,000, on undisclosed data. Now, we submit that it is possible to form a more accurate estimate by taking into account the different amounts consumed and rates of duty levied in the two years in question. The sum is a simple one. The rates of duty before and after January 19, 1888, were respectively:—

	Salt Tax per maund.	
	Jan. 19, 1888.	Since. Jan. 19, 1888.
India	Rs. 2	Rs. 2·8
Burma	As. 3	Re. 1

P. S. 1888–89, para. 57.

The consumption of salt in 1895–96 was:

	Maunds.	
India - - - - - -	33,443,000	Stat. Abst., 1899 [C. 9519], p. 103.
Burma - - - - - -	1,744,000	
Total - - -	35,187,000	

This consumption at the different rates would produce:—

(1) In India.	Rx.
At Rs. 2 - - - -	6,688,600
At Rs. 2·8 an increase of 25 per cent. or	Rx. 1,672,150

(2) In Burma.	Rx.
At As. 3 - -	32,700
At Rupee 1 - - -	174,000
Increase - - -	Rx. 141,300

Therefore the total increased product of taxation in 1895–6 due to the enhancement of the duty on January 19, 1888, may be estimated thus:—

	Rx.
In India - - - - - -	1,672,000
In Burma - - - - - -	141,000
Total - - -	1,813,000

A far higher figure than that—Rx. 1,500,000—shown in the Report.

53. With regard to Customs, on p. 37 of our colleagues' Report the increase from the petroleum duties is estimated at Rx. 300,000. Now, no duty was levied on petroleum in 1883–4 and 1884–5, whereas in 1895–6 the produce of the petroleum duty amounted to Rx. 408,620. Consequently, none of this Rx. 400,000 can be said to be due to elasticity of tax revenue as compared with the earlier years, because in this particular there was no revenue to expand. Therefore, it would seem that the estimate of Rx. 300,000 given in the report is not in correspondence with ascertainable fact. Stat. Abst., 1886 [C. 4730], p. 140. Stat. Abst., 1897 [C. 8659], p. 236.

With regard to the general tariff also we submit that a far surer estimate than that given in our colleagues' Report can be made by careful reference to official publications, among which we venture to indicate Statistical Abstract for India, 1886 [C. 4,730] pp. 71, 119, and 140, and Statistical Abstract for India, 1897 [C. 8,659] pp. 102, 236, and 300–14. For instance, it will be found that the increase due to the cotton duties must be taken at Rx. 1,183,000, and not Rx. 1,000,000.

54. There remains our sixth head of objection to the review of Indian finance contained in our colleagues' Report, paras. 95–115, namely, the want of uniformity in dealing with the figures. We give one or two instances, which we do not pretend are exhaustive.

Income Tax and Licence Duties.—In para. 105 of the Report, p. 36, income tax and licence duties are carefully distinguished, and are not set off one against the other; in para. 108, at p. 37, they are set off one against the other.

Increases and Remissions of Taxation.—In para. 104, at top of p. 36, the net remission of taxation is stated; in the next paragraph, in the course of a series of intricate comparisons, this net figure is discarded.

The two Periods 1861–2 *to* 1884–5 *and* 1884–5 *to* 1895–6.—In the first of these periods the increase in excise and stamp duties is withdrawn from the calculations in para. 105. In the second period, para. 108, at p. 38, the increase in excise is brought directly to account. While in the final summary the position of stamps seems dubious in the extreme.

Different Methods of Estimating.—As a salient instance of this, compare the method of estimating the produce of customs duties on p. 37 by reference to an estimate at the time of their imposition, with the method of estimating the produce of the income tax higher upon the same page by reference to its actual produce at the period

selected for comparison. This latter method, we submit, is right and the former wrong, though it is the former that is more frequently employed throughout these estimates.

55. For the above and other reasons we have found ourselves unable to accept the figures contained in paras. 95–115 of our colleagues' Report. Moreover, we regard ourselves precluded by the terms of reference, and by the absence of any evidence taken before us in this regard, from examining and drawing inferences from the progress of Indian revenue during recent years. We now proceed to submit a general review of Indian expenditure for such period and upon such lines as, in our opinion, can alone be profitably made.

56. The period 1875–6 to 1895–6 (which is the period to which the evidence of the witnesses heard by the Commission, both official and unofficial, was directed) naturally divides itself into two nearly equal portions, namely that from 1875–6 to 1884–5, and that from 1884–5 to 1895–6. The middle year 1885–6 is not suitable as a point of comparison because it was the first of a series disturbed by frontier expeditions, and was in particular rendered abnormal by military preparations on the North-West frontier and by the invasion of Upper Burma. In 1884–5 income and expenditure were practically equal, there being a small deficit of Rx. 386,000 following a large surplus in 1883–4 of Rx. 1,879,000.

The actual figures in Table I. are taken from the following sources:—

For the year 1875–6—from Appendix III. of the Financial Statement, 1886–7, Parliamentary Paper 172 of 1886, pp. 79 and 85. These figures have been dealt with in the same manner as those for 1895–6 in Parliamentary Paper 102 of 1898 (Return of the Net Income and Expenditure of British India). The only point to note is that the Miscellaneous Civil Charges in that year include a net charge of Rx. 237,666 under certain miscellaneous heads, which in 1884–5 and 1895–6 do not appear on the expenditure side of the account as the receipts under cognate heads exceeded the outgoings.

For the year 1884–5—from the Return of the Net Income and Expenditure of British India issued in 1895 (P.P., No. 319, of 1895, pp. 10 and 12).

For the year 1895–6—from the Return of the Net Income and Expenditure of British India issued in 1898 (P.P., No. 102 of 1898, pp. 15 and 17).

The only divergence from the exact form of Sir Henry Fowler's Return is in the order of the main heads of expenditure and in the arrangement of "Famine Relief and Insurance," and "Railway Construction," under a separate head "Special Services" (following a convenient practice in a similar return of net income and expenditure for the United Kingdom), instead of classing these very fluctuating items with Civil Services.

57. Table II. shows the increase or decrease in the principal heads of expenditure for the different periods shown in Table I.

TABLE II.

INCREASE (+) OR DECREASE (—) IN NET EXPENDITURE OF THE GOVERNMENT OF INDIA.

—	1875-6 to 1884-5.	1884-5 to 1895-6.	1875-6 to 1895-6.
	Rx.	Rx.	Rx.
I. Collection of revenue - -	+661,559	+1,311,411	+1,972,970
II. Civil Services - -	+2,691,567	+5,829,004	+8,520,571
III. Military Services - -	+1,092,085	+8,619,869	+9,711,954
IV. Debt Services - -	—338,886	—688,101	—1,026,987
V. Commercial Services - -	—976,478	—27,133	—1,003,611
VI. Special Services - - -	+1,180,148	—1,217,712	—37,564
	+4,309,995	+13,827,338	+18,137,333

58. To this Table we think it advisable to add the figures for 1898–9, the closed accounts of which have recently reached England. The figures here given are taken for the most part from the Finance and Revenue Accounts of the Government of India for 1898–9 published in Calcutta in January, 1900—and in a few cases of special detail from other specified sources.

59. To stop the consideration of Indian finance at the year 1895–6 in a Report dated 1900 besides being out of date is open to the very serious objection that since 1895–6 the great rise in exchange has entirely changed the prospects of Indian Government finance since that year. Consequently to draw conclusions based on the figures of 1895–6 is to deal with unrealities.

How great is the effect produced by the rise in exchange since 1895–6 is disclosed by the following figures taken from the Explanatory Memorandum of the Secretary of State for 1899 at page 17 :—

	Exchange.
	Rx.
Total net charge 1895-6 - - - -	13,990,900
„ (Rev. Est.) 1898-9 - - -	9,253,600
Saving to Government of India -	Rx. 4,737,300

For 1899–1900 exchange promises to be even better, the average rate being slightly above the 16*d.* at which it was taken for last year. It is probable that from this cause the saving to the Government of India as compared with 1895–6 is now about Rx. 5,000,000 a year.

Fall in exchange is certainly one of the marked characteristics of the period 1884–5 to 1895–6. That fall induced a net additional charge on the Government of India of Rx. 10,455,000. But if the period be brought up to date by taking the years 1884–5 to 1898–9, the net additional charge becomes Rx. 5,717,700 (Rx. 10,455,000—Rx. 4,737,300), or little more than half this amount.

It would follow that a consideration of this fact must materially affect any inferences to be drawn from the figures for increase of exchange given in paras. 115 and 116 of our colleagues' Report. We venture to submit that those figures have little practical value as an indication of the present condition of Indian finance, and that, therefore, they are apt to be misleading if left to stand alone.

60. The following Table shows in abstract form the net expenditure of the Government of India for 1898–9, compared with that in 1884–5:—

TABLE III.

NET EXPENDITURE OF THE GOVERNMENT of INDIA.

——	1884–5.	1898–9.	Increase (+) or Decrease (−).
	Rx.	Rx.	Rx.
I.—Collection Revenue - - -	5,116,137	6,453,762	+ 1,337,625
II.—Civil Services - - -	17,221,066	24,600,533	+ 7,379,467
III.—Military Services - - - -	17,057,865	24,245,036	+ 7,187,171
IV.—Debt Services - - -	3,907,848	1,972,509	− 1,935,339
V.—Commercial Services - - -	2,065,975	427,975.	− 1,638,000
VI.—Special Services - - -	1,811,858	1,188,767	− 623,091
Total - - -	47,180,749	58,888,582	+11,707,833

Military Expenditure.

61. The most striking fact in these tables is the increase in the expenditure on the Army in the period 1884–5 to 1895–6. Not only does the increase of more than Rx. 8,500,000 during those 11 years far exceed the increase under any other head of expenditure, but it affords in itself a sharp contrast with the increase of Army expenditure during the period from 1875–6—1884–5. The remarkable nature of this contrast may be set out as follows:—

INCREASE IN INDIAN MILITARY EXPENDITURE.

	Rx.	
From 1875–6 to 1884–5 - -	1,092,085	or 7·5 per cent.
„ 1884–5 „ 1895–6 - -	8,619,869	„ 60·5 „

62. These figures, however, are affected by the fall in exchange, especially for the years 1884–5 to 1895–6. The following figures show the progress of the net Military expenditure of the Government of India from 1875–6 to 1898–9, distinguishing the net cost of exchange in any form, whether on the remittance of the

%

Home Charges, or the sterling pay of the British troops, or on Exchange Compensation Allowance.

NET MILITARY EXPENDITURE OF THE GOVERNMENT OF INDIA.

	1875–6.	1884–5.	1895–6.	1898–9.
	Rx.	Rx.	Rx.	Rx.
Total Net Charges - - -	15,965,780	17,057,865	25,677,734	24,245,036
*Deduct Net Exchange - -	381,672	1,134,829	4,890,998	3,170,286
Net Cost (excluding Exchange) -	15,584,108	15,923,036	20,786,736	21,074,750

* The following are the detailed figures for Exchange connected with the Military Services (see official accounts for the years stated):—

	Rx.
1875–6—Expenditure - - - -	393,437
Deduct Receipts - -	— 11,765
Net Charge - - -	381,672
1884–5—Expenditure - - - -	966,984
Deduct Receipts - -	— 16,455
Add sterling pay of troops -	+184,300
Net Charge - - -	1,134,829

	Rx.
1895–6—Expenditure - - - -	3,200,145
Deduct Receipts - -	— 57,216
Add sterling pay of troops -	+1,156,400
„ Exchange Compensation -	+591,669
Net Charge - - -	4,890,998
1898–9—Expenditure - - - -	2,206,578
Deduct Receipts - -	— 28,682
Add sterling pay of troops -	+778,400
„ Exchange Compensation -	+213,990
Net Charge - - -	3,170,286

Increase (Exchange excluded) -		Rx.	
	1875–6 to 1884–5 -	338,928	or 2·2 per cent.
	1884–5 „ 1895–6 -	4,863,700	„ 30·6 „
	1884–5 „ 1898–9 -	5,151,714	„ 32·4 „
	1875–6 „ 1898–9 -	5,490,642	„ 35·2 „

63. It is obvious that the change from an increase of a little over two per cent. in nine years to one of over 30 per cent. in 11 years, or of 32½ per cent. in 14 years, represents something more than the normal increase of expenditure due to the progress of Government. An examination of the facts leaves no doubt as to the cause of this great increase. The evidence does not point to wastefulness as an important cause of increase. The essential cause was policy. We are precluded from discussing that policy on the merits, but it seems necessary to trace how the growth of expenditure has depended upon the view taken of the needs of external defence. Sir Auckland Colvin has indicated the year 1885 as the time when a definite change took place in the frontier policy of the Government of India. That year saw the close of the Viceroyalty of Lord Ripon, and the beginning of a period when great preponderance was given to military considerations and when the idea of "greater military preparedness" on the North West Frontier dominated the financial policy of the Government of India. The change was at once followed by an increase of 10,000 European and 20,000 Native troops, necessitating an annual increase of about Rx. 1,600,000 in the expenditure of the country. The increase was effected in spite of an earnest protest on the part of the Finance Minister and another member of the Viceroy's Executive Council, and in disregard of the Report of the Army Commission, which a short time previously declared that the then existing strength of the Army was quite adequate to the military needs of the country, including "the contingency of operations beyond the frontier not merely against Russia with "Afghanistan as our ally, but against Russia assisted by Afghanistan." It was pointed out by the dissenting members at the time that the increased strength would probably lead to aggressive enterprises; and the anticipation was almost immediately verified. A few months after the increase had been sanctioned by the Secretary of State, Upper Burma was invaded, conquered, and annexed to the Indian Empire, in spite of protests of Indian public opinion, which feared that the annexation would be financially harmful to India. That this fear was well founded is shown by the fact that during the 11 years 1885–6 to 1895–6 the Government of India spent a net amount of nearly Rx. 15,000,000 in the new Province on account of special military expenditure and civil administration; and even now the annual charge may be estimated at Rx. 750,000. The following figures taken from an annual table (now

discontinued) published in the explanatory memorandum of the Secretary of State for India for the years 1888–96, give the official estimate of this expenditure.

Table IV.

Military Expenditure in Upper Burma, 1885–6—1895–6.

Year.	Army.	Military Works.	Total.
	Rx.	Rx.	Rx.
1885–6	631,000	—	631,000
1886–7	1,517,800	73,900	1,591,700
1887–8	1,475,300	314,300	1,789,600
1888–9	631,600	160,400	792,000
1889–90	435,800	139,800	575,600
1890–1	350,300	137,900	488,200
1891–2	529,200	123,100	652,300
1892–3	502,500	132,500	635,000
1893–4	458,200	145,148	603,348
1894–5	374,100	84,502	458,608
*1895–6	362,500	75,800	438,300
Total	7,268,300	1,387,350	8,655,650

* Revised Estimate.

Total Net Cost of Upper Burma, 1885–6—1895–6.

	Rx.
1885–6	631,000
1886–7	2,068,700
1887–8	2,618,300
1888–9	1,682,800
1889–90	1,331,000
1890–1	1,085,300
1891–2	1,361,100
1892–3	1,176,100
1893–4	1,082,846
1894–5	759,875
*1895–6	782,500
Total	14,579,521

64. A programme of Frontier Defence Works costing to the end of 1895–6 Rx. 4,610,063 was next taken in hand, and has now been completed at a final cost of nearly Rx. 5,000,000. The construction of military railways upon the North West Frontier (the annual working of which does not cover expenses, apart from any question of interest on the capital expended) has been pushed on since 1884–5. Up to the end of 1883–4 about Rx. 4,000,000 had been spent upon these unreproductive undertakings chiefly in connexion with the Afghan war in the two years 1879–80 and 1880–1. See Table at page iv of Report of Select Committee on Indian Railway Communication. Up to the end of 1895–6 the total expenditure on Military Railways was Rx. 15,305,000. See Administration Report of Railways in India for 1896–7. This gives an expenditure upon this item of military preparedness of over Rx. 11,000,000 during the eleven years 1885–6—1895–6. Frontier expeditions which had been rare before 1885 became frequent, entailing (with camps of exercise, mobilizations, &c.) a total expenditure of Rx. 7,360,000 during the eleven years 1885–6 to 1895–6. The following figures show the expenditure on "Smaller expeditions and field operations" (excluding the Afghan war, the Egyptian expedition, and Upper Burma) for the 21 years 1875–6 to 1895–6.

* Revised estimate.

TABLE V.

MILITARY EXPENDITURE—SMALLER EXPEDITIONS AND FIELD OPERATIONS.

(*i.*) 1875–6 to 1884–5.

	Rx.
1875–6	2,643
1876–7—1883–4	Nil
1884–5	161,537
Total (10 years)	164,180

(*ii.*) 1885–6 to 1895–6.

	Rx.
1885–6	2,300,303
1886–7	Nil
1887–8	18,319
1888–9	380,116
1889–90	636,732
1890–1	407,416
1891–2	959,055
1892–3	257,300
1893–4 :	
Kachin, &c.	273,650
1894–5 :	
Waziristan, &c.	242,500
Chitral	67,200
1895–6 :	
Waziristan, &c.	168,900
Chitral	1,647,500
Total (11 years)	7,359,031

Again the contrast is striking. Rx. 164,180 in the 10 years 1875–6 to 1884–5 against Rx. 7,359,031 in the 11 years 1885–6 to 1895–6. Closely connected with this direct increase of expenditure involved in a policy of "greater military preparedness" is the expenditure incurred for the Beluchistan Agency, the re-establishment of the Gilgit Agency, and similar missions—together with a rapid increase in civil charges under the head "political."

65. Summing up these various items of increased expenditure following the new departure in the Government's policy since 1884–5, the additional burden upon the Indian Exchequer imposed thereby may be stated thus for the period 1885–6 to 1895–6.

TABLE VI.

SPECIAL MILITARY EXPENDITURE OF THE GOVERNMENT OF INDIA,

1885–6 to 1895–6.

	Rx.
Addition to the Army, 10 years, 1886–7 to 1895–6	16,000,000
Military Charges in Upper Burma	8,655,650
Special Defence Works	4,610,063
Military Railways, 1885–6—1895–6	11,000,000
Frontier Expeditions and Field Operations	7,360,000
	47,625,713

If to this sum be added only a small portion of the charges for increased subsidies to frontier tribes, the cost of the half-military and half-political missions and other incidental expenses, Rx. 50,000,000 will represent a very moderate estimate of the charge thrown upon the Indian Exchequer in the period 1885–6 to 1895–6 on special military account. See the table put in by Mr. Gokhale when giving evidence before the Commission. It should further be noted that this fifty millions does not represent an increase under certain specific heads of expenditure existing before 1884–5, but a new additional burden thrown upon India by a new policy of military preparedness which is in addition to and not in substitution for the ordinary military expenditure of Government.

66. To sum up, these facts prove that the great progress of military expenditure since 1885 was the direct consequence of the policy of "greater military preparedness," which led to expeditions and annexations beyond the frontier of India. As regards the wisdom or unwisdom of that policy this Commission is not called upon to express an opinion, being concerned only with the financial facts of the situation. But it may be pointed out that a return to the policy of Lord Lawrence and Lord Ripon would remove the cause for the increased military expenditure, and justify a return to the scale of expenditure considered safe and sufficient by the Simla Army Commission.

Exchange.

67. During the period under review Indian finance was seriously disturbed by the decline in the exchange value of the rupee. The extent of that disturbance may be gauged by the following table:—

TABLE VII.

NET COST OF EXCHANGE.

—	1875–6.	1884–5.	1895–6.
	Rx.	Rx.	Rx.
On sterling expenditure	1,377,400	3,364,000	11,685,200
On remittance transactions	57,100	—12,400	—178,300
Sterling pay of troops	—	184,300	1,156,400
Exchange compensation	—	—	1,327,600
Total net charge	1,434,500	3,535,900	13,990,900

Increase.

	Rx.
1875–6 to 1884–5	2,101,400
1884–5 „ 1895–6	10,455,000
1875–6 „ 1895–6	12,556,400

68. The enormous increase in this charge constitutes a very heavy burden upon the finances of India during the eleven years 1885–6 to 1895–6. But the incidence of that burden being distributed over nearly the whole field of expenditure is far more complex than that under any one of the principal heads of account. The first point to note is that during recent years the burden has been very sensibly relieved, so far as the financial* department of the Government of India is concerned. Compared with 1895–6 the figures for the Revised Estimates of 1898–9, which do not differ

* It is only the financial department of the Government of India that is relieved; not the Indian taxpayer. On the contrary, by recent currency legislation, the taxpayer, having to pay taxes and debts in the inflated rupee, is subjected to a new and heavy burden. The relief to the Government has been obtained by covert taxation of the people. This should be borne in mind when credit is claimed for the recuperation of Indian finance.

appreciably from the closed accounts, show a reduction in the net charge of no less than Rx. 4,737,300, as under :—

NET COST OF EXCHANGE.

—	1895–6.	1898–9.	Decrease.
	Rx.	Rx.	Rx.
On sterling expenditure - - - -	11,685,200	8,045,600	3,639,600
On remittance transactions - - - -	—178,300	—54,000	+124,300
Sterling pay of troops - - - -	1,156,400	778,400	378,000
Exchange compensation - - - -	1,327,600	483,600	840,000
Total net charge - - -	13,990,900	9,253,600	4,737,300

69. An important consideration with regard to exchange under ordinary circumstances is that it constitutes expenditure which is largely outside the control of the Government of India. It is, however, not all of it of this unadvoidable character, and it will be convenient to distinguish between that portion of the charge for exchange which may be called "automatic," and that portion which, like any other increase of expenditure, has been voluntarily incurred by Government during the period under review. In reviewing progress of expenditure it is essential to avoid making the assumption that the whole increase in the cost of exchange may be set on one side as the result of causes beyond control. There are, at least, three main causes of an increase in the cost of exchange:—

1. A fall in the exchange value of the rupee.
2. An increase in sterling charges.
3. Compensation given to employés of Government not included in the terms of their original contract of service.

70. The first cause is obviously "automatic." The second is only "automatic" to a small extent, for instance, in so far as it is due to the scale increase of pensions and other home charges subject to annual increment by efflux of time. Any additions to sterling charges on railway account—and they have been very heavy—or on loans are clearly not "automatic." The third cause is obviously not "automatic" at all. The importance of this distinction will become manifest when the charge for exchange is broken up into its constituent parts. In 1875–6 the net sterling charges of the Government of India were 12,502,000*l.*, in 1884–5 they had increased to 13,844,000*l.*, and in 1895–6 to 15,380,000*l.* Thus, during the first nine years the sterling expenditure of the Government of India increased by 1,342,000*l.* and in the next 11 years by 1,536,000*l.* To remit 1,500,000*l.* in 1895–6 cost (at the rate of Rs. 17½ for every 1*l.*) for exchange alone (*i.e.*, Rs. 7½ × 1,500,000) Rs. 11,250,000 or Rx. 1,125,000. Therefore, Rx. 1,125,000, included in the charge for exchange in 1895–6, represents additional expenditure incurred since 1884–5. Bearing these facts in mind the increase in the cost of exchange may be shown thus:—

INCREASE IN NET COST OF EXCHANGE

(*i*) 1875–6 to 1884–5.

	Rx.
Total increase as shown above (Table VII.) -	2,101,400
Deduct Cost of exchange on addition to sterling charges 1,342,000*l.*, costing for exchange alone Rs. 2·45 per 1*l.* - - - - -	328,800
Automatic increase in cost of exchange due to fall in the value of the rupee - - - -	1,772,600

(*ii.*) 1884–5 to 1895–6.

	Rx.
Total increase as shown above (Table VII.)	10,455,000
Deduct (*a*) Cost of exchange on addition to sterling charges 1,536,000*l.*, costing for exchange alone Rs. 7·5 per £	1,152,000
(*b*) Exchange compensation	1,327,600
Total of (*a*) and (*b*)	2,479,600
Automatic increase in cost of exchange due to fall in the value of the rupee	7,975,400

71. Taking, therefore, the second and more important period (1884–5 to 1895–6), the real increase in the cost of exchange due to uncontrollable causes may be put at Rx. 8,000,000 during the 11 years, and nearly Rx. 2,500,000 of the increase falling under the head of exchange must be classed as increase of expenditure not automatic in its character, but part and parcel of the financial action of the Government of India in increased military expenditure and exchange compensation. A similar analysis of the increased cost of exchange for the period 1884–5 to 1898–9 would work out as follows:—

Increase in Net Cost of Exchange.
1884–5 to 1898–9.

	Rx.
Total increase (from Rx. 3,535,900 to Rx. 9,253,600)	5,717,700
Deduct (*a*) Cost of exchange on addition to sterling charges, 2,250,000*l.*, costing in 1898–9 for exchange alone Rs. 5 per 1*l.*	1,125,000
(*b*) Exchange compensation	483,600
Total of (*a*) and (*b*)	1,608,600
Automatic increase in cost of exchange	4,109,100

Which again shows the immense effect upon the finances of the Government of India exercised by the recent return to a higher level of the exchange value of the rupee.

72. It remains to consider one other important point in connexion with this question of exchange, and that is the incidence of the charge under the different heads of expenditure. A very large part of the burden of exchange is due to the deliberate policy of the Government of India in incurring heavy gold liabilities in connexion with the development of railway communication in India. The charge for exchange under the head of railway revenue account is heavier than under any other head, and represents to-day about one-third of the total charge. In spite of this fact and in spite of an enormous increase on this account during the 11 years, 1885–6 to 1895–6, the net charge for railways in the accounts of the Government of India has not increased rateably with the increased burden of exchange. The following figures establish this point.

Exchange and Railway Revenue Account.

	1884–5.	1895–6.	1898–9.
Net sterling charges	£4,791,148	£5,747,782	£5,874,200
Cost of exchange	Rx. 1,164,210	Rx. 4,366,989	Rx. 2,937,100
Total net charges on revenues of India	Rx. 1,051,751	Rx. 1,620,268	Rx. 878,100

Increase in sterling charges, 1884–5 to 1895–6	£956,636
Increase in cost of exchange, 1884–5 to 1895–6	Rx. 3,204,779
Increase in total net charges, 1884–5 to 1895–6	Rx. 568,517

73. This table shows that although the burden of exchange upon the railway revenue account was increased in the 11 years by no less than Rx. 3,204,779 (of which about one-fourth was due to the increased sterling expenditure) yet the general railway revenue only suffered to the extent of Rx. 568,517; while in 1898–9, as compared with 1884–5, the total net charges are actually less by Rx. 173,651, although exchange was heavier by Rx. 1 774,890. These striking results seem to point to the conclusion that though a falling exchange may have increased the financial burdens of Government in civil administration and military organisation, it has not had a corresponding effect in connexion with the Government's railway undertakings. At any rate, this startling fact remains, namely, that nearly three and a quarter millions Rx. (out of ten and a half millions) of the total additional charge for exchange in 1895–6, as compared with 1884–5, was borne on the railway revenue account at a net increased cost to the Government of India of less than Rx. 600,000.

Exchange Compensation Allowance.

74. Closely connected with the influence upon Indian finance of a falling rupee is the subject of exchange compensation allowance to the servants of Government. The great fall in the value of the rupee was felt severely by those officers of Government who had to make remittances to England; and the Government of India decided to grant "exchange compensation allowance" to its non-domiciled European and Eurasian employés. The charge for this allowance in 1893–4 was Rx. 618,468, in 1894–5 it was Rx. 1,239,275, and in 1895–6 it was Rx. 1,327,632. In 1898–9 the closed accounts show that the charge for exchange compensation allowance has fallen below Rx. 500,000. The grant of this compensation was much resented in India, (1) because it was made at a time when the finances were much embarrassed, when the Famine Insurance Fund was suspended, and the provincial balances invaded, and because sufficient consideration was not shown for the taxpayer, who, himself a sufferer from the fall in exchange had to compensate his richer fellow-sufferers; (2) because it depended upon race privilege, an Indian official receiving no compensation, though he may make large remittances to England for the education of his family at English schools and colleges; (3) because it was indiscriminate, not regarding the rate of exchange when the employé entered the service, nor the fact whether or no any remittance was being made to England; and (4) because the Government of India has acknowledged that it was not legally bound to grant such compensation. Qq. 18,638, 18,351, 18,354, 18,362–4. Qq. 19,027, 17,742. Qq. 10,280, 19,415–17.

75. These grounds of complaint should be removed. But the Government of India failed apparently to see the principal lesson to be learned from this remittance trouble, viz., that the difficulty arose directly from the employment of imported agency, and that the way to meet the difficulty was, as far as possible, to substitute indigenous agency, the payment of which is independent of sterling remittances to England.

Larger Employment of Indians.

76. This brings us back to the main source of financial relief to India; the free employment of Indians in the service of their own country, to which we have already referred (paras. 20 to 24). So far as the principle is concerned no obstacle stands in the way. By the terms of the Imperial Act of 1833 Indians were placed on a footing of complete equality with Englishmen and made eligible for every office in India for which they were qualified by ability and integrity. The Court of Directors in a despatch to the Government of India pointed out that there was to be no "governing caste" in India. The question of the personal composition of the services in India was to be from that time not a question of policy or of "British supremacy," but purely a question of administrative efficiency. And your Majesty's gracious proclamation of 1858 enjoined that merit and not race was to be the test for employment. To the British observer, unacquainted with Indian conditions, it may, perhaps, appear that we lay undue stress upon the question of State employment. In this country the class dependent on service under the Crown is comparatively limited. The greater national energies are drawn to the independent professions, to political ambition, and industrial enterprise. But this is not so in India, where so large a proportion of all enterprise is absorbed by the State, and where Government service is practically the only road to distinction. Qq. 4176, &c., 17,819, 19,320. App. F., para. 17.

Q. 19,341. 77. When we come to examine the facts it does not appear that in the higher grades Indians have been as freely and impartially admitted to office as Your Majesty's injunction requires. According to a Parliamentary Return issued some years ago, there were in the year 1889–90, excluding the Military Department from the calculation, 1,532 civil servants of Government in India drawing pay from the revenues of India of Rx. 1,000 a year and upwards, amounting in the aggregate to Rx. 3,000,000. Of these 1,532 only 59—or less than 4 per cent.—were natives of India, whose share of the three millions was under Rx. 100,000, or less than 3 per cent. If we descend to officers drawing between Rx. 500 and Rx. 1,000 a year, we find that in the Civil Department there are 421 Indians against 1,207 Europeans and 96 Eurasians, In the Public Works Department the number of Indians is 85 as against 549 Europeans and 39 Eurasians. And in the incorporated Local Funds there are 4 Indians as against 22 Europeans and 3 Eurasians. The total salaries of officers of this class in the several Departments are as follows:—Civil Department: Indians, Rx. 290,500; Europeans, Rx. 883,000; Eurasians, Rx. 65,000. Public Works Department: Indians, Rx. 53,700; Europeans, Rx. 396,200; Eurasians, Rx. 27,800. Incorporated Local Funds: Indians, Rx. 2,500; Europeans, Rx. 14,600; Eurasians, Rx. 1,700. Altogether the charge for European salaries and pensions amounts to about Rx. 20,000,000.

Qq. 10,983–9

Qq. 10,722, 10,724, 10,728–9, 16,596A, 19,414, 19,409–11. 78. It is evident that a large saving might be effected if for costly European agency cheaper Indian agency could be substituted. How can this be done?

79. In dealing with this problem three points must be specially kept in view: (1) The high standard of upper grade salaries in India; (2) the doctrine of an irreducible minimum of European agency; and (3) the competition for office between Europeans and Indians. With regard to the first point, the liberal rate of salaries in the higher offices originated, no doubt, from the fact that the high pay was necessary to induce Europeans of the best class to accept service in India. These salaries were, therefore, made up of two parts, (*a*) market value of the labour, and (*b*) compensation for exile in a tropical climate. It is not necessary to pay this compensation to Indians living in their own country. It appears, therefore, that, as a measure of economy, all salaries in India should be reduced to (*a*) the market value, and should, as far as possible, be filled by Indians who do not require (*b*) compensation for exile. But this measure of financial relief is limited by (2) the doctrine of the "irreducible minimum" of European agency, necessary to maintain British supremacy. As regards this European agency it will be admitted that more should not be imported than is absolutely necessary; that it should be of the best quality; and that it should be allocated in the way most advantageous to the public service. With regard to point (3) the competition for office between Europeans and Indians, it is very desirable that an end should be put to the unseemly struggle which takes place whenever a vacancy occurs in an appointment open equally to Europeans and Indians, as for example the Presidency magistracies, and judgeships of the Small Cause Courts. This struggle leads to much angry feeling, to charges of jobbery against the authorities, and to antagonism between the European official class and the educated Indians, detrimental to good administration.

80. As a practical proposal, in the interests of economy, it is suggested that the prize offered at the Indian competitive examination should be, not entry into a Covenanted Service with somewhat vague privileges, but a personal yearly allowance, which would be the compensation for exile in a tropical country, and this might be payable in sterling. The balance of the existing salary should be payable in the Indian currency, without exchange compensation allowance, and would represent the market value of the work, and should form the pay of the appointment held. This is analogous to what is (or was) done in the Royal Engineers, where the officer drew the pay of his rank and in addition the pay of the appointment which he held, say in the Public Works Department. The pay of the appointment was all that was drawn if the holder of the appointment was not a Royal Engineer. An arrangement of this sort would allow of the scaling down of all civil appointments in India, and would be a financial inducement to appoint an Indian wherever possible. As regards the possibilities in this direction we would specially point to the evidence of Captain Hext, R.N. But if economy is to be really enforced there must be some authoritative limitation to the employment of expensive imported agency. If on political grounds a minimum of British agency is necessary, so on financial grounds a maximum is equally essential. At present the Secretary of State possesses a veto over the creation of any new appointment above a certain salary. But

Qq. 18,351, 19,419.

App. F., paras. 65–6.

this reservation does not check the natural tendency of European officials to extend the employment of their own countrymen. The proposal, therefore, is that the Secretary of State, looking to political considerations, should fix a minimum annual total to be paid for European agency in India; and similarly, looking to financial considerations, a maximum. Beside keeping within reasonable bounds the employment of expensive European agency, the effect of such an arrangement would be to get rid of the unseemly struggle between European and Indian which takes place at each vacancy open to both. For if the appointment was given to a European the Indians would view the case with equanimity, knowing that automatically a corresponding advantage must accrue to them; while the Government, when desirous of nominating a European to some other appointment, could make room for him by giving an existing European vacancy to an Indian. This points to another incidental advantage, arising from the elasticity of the proposed system. For if the Government, for any reason, desired to strengthen the European element in any particular province or department it could do so readily, without injustice to anyone, by increasing the Indian element in those provinces and departments (*e.g.*, education, judicial, survey, opium, finance, telegraph, &c.) where this could be done with the most advantage to the public service. As British supremacy in India is an imperial interest, it is evident that the British Treasury should contribute to the cost of the "irreducible minimum" of European agency required to maintain that supremacy. Qq. 16,467, 16,494.

81. With regard to the Indian Medical Service we recommend, as deserving of consideration, the following resolution of the Indian National Congress of 1898, as being in accordance with the evidence of Dr. Bahadurji and other witnesses:—

Q. 19,342.

> Resolved—(*a*) that this Congress is of opinion that the present constitution of the Higher Civil Medical service is anomalous, indefensible in principle, injurious in its working, and unnecessarily costly; that the time has arrived when, in the interests of the public, medical education and the advancement of medical service and of scientific work in the country, as also in the cause of economic administration, the Civil Medical service of India should be reconstructed on the basis of such service in other civilised countries, wholly detached from and independent of the military service.
>
> (*b*) That whilst this Congress views with satisfaction the action of the Imperial Government in throwing open 19 Civil Surgeoncies to be filled up by promotion from the ranks of Civil Assistant Surgeons, deplores nevertheless the unsatisfactory position and prospects of members of the Subordinate Civil Medical Service (Civil Assistant Surgeons and Civil Hospital Assistants) compared with members of similar standing in other departments of the public service, and prays that Government will grant an open inquiry into the present constitution of the Subordinate Civil Medical Department by a mixed commission of official and non-official members.

82. Another wide field for economy is to be found in the further extension of local self-government, and the substitution of voluntary unpaid workers for the lower class of native subordinates. It is well known that the impossibility of providing adequate salaries for the vast number of subordinates required for Indian administration, was one of the leading considerations which induced Lord Ripon to initiate his system of local self-government. Considerable financial relief was thus obtained. Nor was this done at the expense of efficiency. On the contrary, the ordinary Indian householder, whether landholder, trader, or peasant, is skilled in managing local affairs, from his long experience in the ancient village community, while he is more to be trusted than the underpaid stipendiary who is little subject to local public opinion. This is not the place to give a detailed scheme, but it may be mentioned that the economies contemplated would be effected by administering our collectorates more on the model of a well-ordered Native State, such as Mysore or Gondal. The European collector would be the "Raja"; he should be provided with an experienced Indian colleague, who would correspond with the "Diwan" or prime minister; and as long as they carried with them the assent of the local representative Councils, and conformed to the general principles of British rule, there would be little ground for interference on the part of the central government, which would look mainly to results. This arrangement would reduce the expense for subordinates of the centralised departments, who would inspect and advise, rather than administer. Also it would reduce the work and expense of the Secretariats; while favouring the economy and local well-being which arise out of decentralisation, and elasticity of methods. This would be in accordance with the views stated by Lord Salisbury (then Lord Cranborne App. E., paras. 13, 14, &c.

and Secretary of State for India), in his speech in the House of Commons of 24th May, 1867, when he spoke of well-governed Native States as highly favou able to the well-being of the Indian people (*vide* Appendix E). At Bhaunagar in Kattywar a joint administration was conducted on these lines by Mr. Percival of the Bombay Civil Service, and Diwan Gaurishankar, with eminent success, during the minority of the young Raja.

Provincial Finance.

Qq. 17,260, &c., 18,036, &c., 19,208, &c.

83. The progress of expenditure cannot be satisfactorily dealt with without taking into careful account the Decentralisation Scheme of 1882–3, under which revenue and expenditure are divided between the Central and the Provincial Governments. Roughly speaking, Debt, Army, Railways, Mint, Post and Telegraph, Foreign Relations, Home Charges, and Exchange are under the special care of the Government of India, while the rest of the administration, including half the charges for Irrigation and most branches of domestic progress, is under the control of the Provincial governments. The theory is that the whole revenue of the country belongs to and is at the disposal of the Central Government, which assigns portions of it for Provincial use, while reserving to itself large powers of supervision and control. In 1895–6 the result of this arrangement was that the revenue was distributed as follows :—

	Rx.
Total Net Revenue under the Principal Heads - - -	62,149,632
Imperial Share, 69 per cent. - - - - -	42,972,937
Provincial and Local, 31 per cent. - - - - -	19,176,695

84. But these figures do not represent the whole matter. The cost of collecting this revenue (omitting the charge for Assignments and Compensations, Refunds and Drawbacks, and the cost of Opium production, already taken into account in arriving at the net revenue) was Rx. 6,417,548, of which Rx. 4,666,253 or 72 per cent. was thrown upon Provincial revenues and only Rx. 1,761,295 or 28 per cent. borne by the Imperial Exchequer. In these circumstances it is necessary to deduct the cost of collection from the net revenue in order to see the true nature of the apportionment made between the Imperial and Provincial Exchequers.

IMPERIAL AND PROVINCIAL FINANCE, 1895–6.

	Imperial.	Provincial.
	Rx.	Rx.
Net Revenue - - - - - - - -	42,972,937	19,176,695
Deduct Cost of Collection - - - - - - -	1,761,295	4,666,253
	41,211,642	14,510,442

Thus out of a total net revenue, after deducting the cost of collection, of Rx. 55,722,084, the Imperial share is 74 per cent. and the Provincial share only 26 per cent.

85. The contracts which fix this distribution are quinquennial, and for any increase over the standard thus fixed the Provincial Governments must provide out of their own resources, except in exceptional circumstances, *e.g.*, famine. On the other hand, it is only in special Imperial emergencies that the supreme Government levies from the Provincial Governments special contributions, which may or may not be refunded. But as the terms of the contracts are fixed by the Central Government, which is also sole judge of financial emergencies, whether Imperial or local, it is evident that there is no Provincial finance distinct from, and independent of, Imperial finance, as in Federal States. Unlike the Constituent States in Germany and the United States of America, the Indian Provincial Governments have no independent financial powers, nor is there any stability or continuity in the arrangements, which are revised every five years.

86. Owing to these imperfections the original object of the scheme of decentralisation has not been realised; the feeling of financial responsibility has not been properly developed in the Provincial Governments; while the old antagonism between them and the Central Government still continues: on the one hand the Imperial Government, looking to the growing uncertainties of general finance and its own expanding needs, seeks to enforce reduction and economy in respect of Provincial

expenditure at each renewal of the contracts; while on the other hand the Provincial Governments, naturally interested in internal improvements, struggle hard against the limitations imposed, each striving to get the best terms it can for its own Province. From this anomalous condition of things the following results arise:—

(1.) The Central Government appropriates to itself a proportion of the national resources larger by far than what is usual in Federal States, and leaves to the Provincial Administrations very meagre resources to meet the growing demands of internal improvements. Out of the total net revenues available for carrying on the purposes of Government it reserves to itself no less than 74 per cent.

(2.) As pointed out by Sir A. Colvin and others, questions of foreign policy have during the last 15 years absorbed the attention of the Supreme Government, with a corresponding increase in military and quasi-military charges. This will be seen by a comparison of the figures before and after 1884–5.

TABLE VIII.

CIVIL AND MILITARY EXPENDITURE, 1875–6—1895–6.

Year.	Civil Services. Rx.	Military Services. Rx.
1875–6	14,529,499	15,965,780
1884–5	17,221,066	17,057,865
Increase	2,691,567 = 11%	1,092,085 = 7·5%
1884–5	17,221,066	17,057,865
1895–6	23,050,070	25,677,734
Increase	5,829,004 = 34%	8,619,869 = 50·5%

From this it appears that expenditure on the Military services has increased at a far greater rate since 1884–5 than that upon the Civil Services, in sharp contrast to the state of things prevailing before that year. These figures also show that the Central Government, by drawing to itself 74 per cent. of the National resources, has diverted expenditure from what may be called the reproductive objects of internal improvement to the unreproductive objects of foreign policy and military preparedness.

(3.) The want of certainty and continuity makes it difficult for the Provincial Governments to carry out comprehensive schemes of internal improvement, such as those of irrigation and water supply. Also the grants from the Central Government are sometimes increased and sometimes diminished at the quinquennial adjustments, and these fluctuations involve expansion or restriction of establishments, which cannot be carried out without waste.

(4.) Complaints and jealousies arise regarding the distribution of grants as between Province and Province. Great inequalities exist in regard to the total burden the different Provinces have to bear and the assignments they receive for Provincial purposes.

87. As regards the remedies to be applied, Sir A. Colvin proposes that the periods of contract should be extended from five to ten years. Sir D. Barbour attaches great importance to the further development of Provincial decentralisation, and adds that if called upon to choose between seeing "the Imperial Government embarrassed and "the Provincial Governments starved" he would prefer the former alternative; and he looks forward to the time (not yet, in his opinion, arrived) when it would be possible to assign permanently to each Province a certain fixed proportion of the total revenue raised in that Province, and do away with the present periodical revisions altogether. The best remedy, in our opinion, will be found in the scheme laid before the Commission by one of the Indian witnesses, which is recommended by the high

Qq. 3065, 15,946, 19,318. Qq. 2101, 2094. Q. 2084.

Q. 18,105. authority of Sir Charles Elliott, Sir W. Hunter, Mr. Justice Cunningham, and Mr. Justice Ranade. These proposals are:—

I. That there should be no divided departments, but that those departments of receipts and expenditure which are now wholly, or almost wholly, Imperial, or which it may be found convenient to make Imperial, should be set on one side for Imperial purposes, and that the receipts and expenditure of the Provincialised departments should be entirely Provincial;

II. That whatever the sum be by which the Imperial expenditure exceeds the income from those sources of revenue which are not Provincialised, that sum should be declared the first charge on the Provincial revenues;

III. That the Provincial surplus which arises from the excess of receipts over expenditure should be the fund from which, in the first place, all Imperial necessities should be met before any increase can take place in Provincial expenditure;

Q. 18,104. IV. And that, as regards the future growth of revenue, it should, as far as possible, be divided equally between Provincial and Imperial, subject to the condition that if the Imperial exigencies ever required a larger share the Imperial share should be increased.

88. The following advantages are claimed for the foregoing scheme:—

(1) It will place the financial system of India once for all on a sound basis, and will bring it more in a line with the federal systems of finance in other countries;

(2) It will remove all irritation at present felt by the Provincial Governments and secure to them, under ordinary circumstances, half the normal growth of revenues in their provinces, enabling them thereby to make steady efforts towards the progressive improvement of their internal administration;

(3) It will tend to secure greater and greater equality in the burdens which Imperial expenditure imposes upon the different provinces. The effect of contributing to the Imperial Exchequer an equal portion of all future increase in revenue (viz., 50 per cent.) will be that year by year the relation which the contribution of a province bears to its revenue will tend more and more towards equalisation. Thus the provinces which now pay, say 60 per cent. of their revenue, will, after paying only 50 per cent. of their increase for some years, be found to have dropped down to a ratio of 58 or 57 per cent. And similarly in the provinces which pay less than 50 per cent. at present, the ratio will constantly work itself up towards 50 per cent.; and

(4) It will operate as a check upon the inclination of the Government of India towards increased unreproductive expenditure.

89. To these proposals of Sir Charles Elliott, one more may be added, viz., that the Government of India should have no power of claiming for itself a higher proportion of the provincial increases than 50 per cent., except in those extreme cases described by Lord Ripon's Government as dire necessities, and that whenever, in the opinion of the Government of India, those extreme cases arise, a formal declaration of the grounds on which such opinion is based should be drawn up and sent to the Secretary of State, to be placed by him before Parliament. Further, the increase should be allowed only with the sanction of the Secretary of State, who should give a hearing to the Provincial Governments and take their objections, if any, into account before according such sanction. These proposals, which are only a logical development of the financial decentralisation already effected, will secure to provincial finance the stability and certainty it so much needs, and while making adequate provision for the real necessities of the Central Government, will enable the Provincial Governments to make comprehensive and well-sustained efforts in administrative reform and the internal improvement of the country.

90. In reviewing the progress of expenditure, we must never lose sight of the fact that, on account of the peculiar economic position of India, and the impoverishing effect of the drain of both public and private capital to Europe, any excess in expenditure has more deplorable effects than would, in a self-governed country, be indicated by the same figures. Until this drain is checked, no permanent improvement for the Indian people can be expected.

91. For convenience of reference, and as deserving serious consideration, we add the following note of the main points urged in their evidence by the Indian witnesses, as

regards the defects of the present management and administration of Indian expenditure, and as regards the direction in which improvements may be effected to the advantage of the Indian people. It is contended by them—

1. That Indian expenditure is not always exclusively, or even mainly, governed by Indian considerations, as is illustrated by—

   (*a*) Indian Defence; Indian frontier policy in its varying phases—adopted in furtherance of Imperial schemes of trans-frontier territorial expansion more than for India's defence—tending only to weaken her natural defences and loading her with indefinite and ever-increasing liabilities;

   (*b*) Railway extensions forced on without due heed to the country's needs or means—apparently intended to advance her industrial development, but unaccompanied by other and larger necessary measures which alone could make them serviceable to the proposed end;

   (*c*) Continued concessions, in respect of pay, promotion, pension, &c. to the European services, both civil and military—concessions lending colour to the view that the country exists for the services, and not the services for the country.

   The greater part of the increase of expenditure in recent years falls under these heads, and this fact bears out the contention of the Indian people that Indian interests are often subordinated to considerations of Imperial expansion, British commerce, and the European services.

2. That due care is not exercised, nor is strict economy enforced, in the spending of India's money, as may be seen from the following—

   (*a*) Comparatively little is yet done in the way of substituting qualified indigenous agency for foreign agency in the various departments of the civil administration (*e.g.*, judicial, police, medical, post, telegraph);

   (*b*) Overgrowth of controlling and supervising central establishments (*e.g.*, sanitation, police, jails, stamps, registration, &c.);

   (*c*) Organisation and maintenance of the Indian armies permanently on a war footing, without the necessary supports of reserves and militia—a system of national defence, long since discarded as wasteful in European countries;

   (*d*) Disproportionately large numbers of British troops as compared with Native;

   (*e*) The officering of the Native army—over-recruitment of the Staff Corps and an increasingly restricted employment of Indian officers, the question having an important bearing on finance;

   (*f*) Railway contracts and concessions to railway companies.

3. That there is a faulty distribution of expenditure of Indian money—

   (*a*) Comparatively more is spent on so-called national defence, and less on the material and moral development of the country and the improvement of the civil administration;

   (*b*) More is spent on Imperial purposes and less on provincial purposes than is desirable in the present circumstances of the country, the provincial purposes being intimately connected, and the Imperial purposes only remotely, with the immediate well-being of the people;

   (*c*) More is spent on improvement of communications, and less on the improvement of the condition and capacity of the people themselves.

   The present scale of India's expenditure is also open generally to objection on the ground that it is much beyond the capacity of the country to bear.

III.—*Apportionment of Charge.*

92. In dealing with the principles (*ante* para. 18) upon which a settlement of this question should be based, we assumed that it is the desire of the British people that British rule should be one of justice and righteousness, for the benefit of both India and Britain, and not for the benefit of Britain alone at the expense of India. Guided by this desire, the apportionment both of burdens and benefits will follow the analogy of two partners jointly interested, and not that of master and slave. When, therefore, we come to make practical suggestions, we have to ascertain what are the purposes in which both are interested, and what proportional share of those interests belongs to

Q. 13,642. Q. 17,014. Q. 6591, 8683, 17,819.

Q. 16,283. each? With a view to a truly equitable settlement between them, some reasonable consideration should also be given to the capacity of each to sustain the financial burden, England being very rich, and India very poor. Now, as regards the question, what are the joint interests, the first point is that the maintenance of British rule in India is probably the greatest of our Imperial interests. To use the words of the present Viceroy, Lord Curzon: "India was the pivot of our Empire. If this Empire "lost any other part of its dominions we could survive, but if we lost India the sun of "our Empire would be set."* It seems, therefore, clear that the Empire should bear Q. 14,289. at least a share of those expenses which are necessary to maintain the conditions without which British rule in India would not be possible. What those conditions are was very distinctly laid down by Lord Kimberley, speaking at the Mansion House App. D., para. 10. (*v.* "Times" of June 13, 1893). This is what he said: "There is one point upon "which I imagine, whatever may be our party politics in this country, we are all "united: that we are resolutely determined to maintain our supremacy over our "Indian Empire. That, I conceive, is a matter about which we have only one opinion, "and let me tell you that that supremacy rests upon three distinct bases. One of "these bases, and a very important one, is the loyalty and goodwill of the Native "Princes and population over whom we rule. Next, and not less important, is the "maintenance of our European Civil Service, upon which rests the foundation of our "administration in India. Last, not because it is the least, but because I wish to "give it the greatest importance, we rest also upon the magnificent European force "which we maintain in that country, and the splendid army of Native auxiliaries by "which that force is supported." From this it appears that the main instruments by which British rule in India is maintained, are, a strong European military force; a European Civil Service; and a contented Indian population. Without these combined factors the conditions necessary to British rule could not be produced. The maintenance of these instruments of British rule is therefore clearly an Imperial interest, Qq. 5345, 9612–3. and we are of opinion that the Imperial Exchequer should bear a proper share of the expense involved.

93. The next question is, What is a proper share? Now, in dealing with this question, we fully recognise the advantage to India from the maintenance of law and order, and provision against foreign aggression. Also we do not wish to minimise the political and educational benefits arising to India from the British connexion, so far as she has been made partaker of free and progressive institutions. If we did so, we should not give true expression to Indian sentiment. It would indeed be difficult to exaggerate the deep feeling of gratitude which exists for the truly British boons of a free press, free public meetings, municipal institutions, trial by jury, and higher education. In proportion as these and similar boons have been extended or withdrawn, so does enlightened Indian opinion measure the benefits accruing to India from the British connexion, as contrasted with a possible similar connexion with any other country in the world. So strong is this feeling that we do not hesitate to say that if, in accordance with our pledges, the Indians were made full partakers of true British citizenship, they would regard the maintenance of British supremacy as among the Qq. 19,833–7. first and best of India's interests. On the other hand, if the British connexion means, the withdrawal of these boons, on grounds of distrust, the increased substitution of British for Indian agency, and vast military expenditure in support of British Imperial policy, then, from the Indian point of view, the benefits of the British connexion are largely reduced and much injury is inflicted.

94. From these considerations it will be evident how difficult it is to appraise definitely the proportional advantage to India and to the Empire from the maintenance of law and order in India, and her protection from foreign aggression. But one distinguishing mark and test of the British interest is indicated in Lord Kimberley's declaration, viz., the employment of European agency in the Civil and Military Services. This is the Imperial requirement already referred to as the "irreducible minimum." For, if we imagine a great Indian-born ruler like Akbar, it is evident that he would only employ Europeans in certain special cases, relying upon the abundant supply of experience, intelligence, and warlike qualities to be found in India, for the ordinary defence and administration of the country.

Qq. 5345, 16,505, 16,404, 19,419, 19,800. 95. Taking, therefore, the employment of Europeans as a fair practical test of Imperial requirements, we propose, as a working arrangement, that Britain should pay for all British employed upon Indian work in Britain; that India should pay for

* *Times*, 3/12/98.

all Indians employed in India; and that, as regards British employed in India, and Indians employed in Britain, there should be a compromise under which the expenses should be shared equally. Or, to make the British share still more moderate, the cost of all European agency on behalf of India, wherever employed, might be divided half and half between India and the Imperial Exchequer. The British taxpayer would thus, equally with the Indian taxpayer, become interested in checking the excessive employment of costly imported agency, and a useful spirit of inquiry would be aroused in this country with reference to the efficiency and economy of the Indian administration. We believe that the British taxpayer would, in the end, be more than recouped for his sacrifice by the prosperity of the 300 millions of India, and the consequent enormous trade which would thence accrue to the United Kingdom.

App. D, para. 14.

Qq. 17,014, 17,821, 19,320.

96. Such being the arrangement we propose with regard to the ordinary expenses of Indian defence and administration, we come next to the special cost of wars carried on beyond the Indian frontier of 1858. With regard to the last Afghan war, Lord Salisbury declared that it formed "an indivisible part of a great Imperial question." If this is a correct statement—and we believe that it is—it follows that the whole cost, ordinary and extraordinary, of such wars should primarily be borne by the Imperial Exchequer, India contributing in proportion to the benefit accruing to her from the protection of her frontier or other circumstances arising out of the war. On the other hand, the disadvantages to her should not be lost sight of, such as the great destruction of cattle and other transport animals, and the increasing difficulty and expense of recruitment for the Native army, on account of the dislike to service outside of India. This arrangement would apply to wars carried on in the immediate vicinity of India. But in the case of wars carried on in distant parts, such as Abyssinia, the Soudan, Egypt, East Africa, or the Cape, no expenditure should be placed upon India, either ordinary or extraordinary. On the contrary, the great convenience experienced in each of these cases from being able to draw on Indian resources must be reckoned as an important credit item in the account between India and the Imperial Exchequer. The only case in which, perhaps, an exception might be made is when the Suez Canal is actually threatened and may have to be actually defended. India might then be called upon for a contribution, provided always that other British colonies and dependencies in Australia and the Far East—which similarly benefit from the Suez Canal—also pay their share.

App. D., para. 31. Qq. 5352–3.

Q. 6129.

Qq. 5355, 6117, 6125–7, 6623.

Q. 17,074.

97. But, in balancing the account of war expenditure as between India and the Imperial Exchequer, we cannot overlook the great sums charged in times past improperly upon India on account of wars waged beyond the Indian frontier, for purposes avowedly Imperial. What the grand total on account of Afghan and other wars amounts to it is difficult to estimate. But we may draw attention to the calculations made by Colonel Hanna ("Backwards and Forwards," p. 40), showing an estimate of over Rx. 70 millions (Appendix I.). From official returns it appears that nearly Rx. 13 millions were spent from April 1882 to March 1892 on minor wars beyond the Western and North-Western frontiers. There was also the last Burmese war.* The cost of all these wars, including the first Afghan war (1838–42), has (in spite of protest†) been placed upon India, with the exception of 5,000,000*l.* granted by the Imperial Treasury towards the cost of second Afghan war.

App. D., para. 44. Qq. 5347–9. Qq. 17,821, 18,514, 19,047. Qq. 5353–4, 6180–1, 6197.

98. For all these wars, so far as they were "an indivisible part of a great Imperial question," the Imperial Exchequer should primarily have paid. But the charges were all thrown upon India, imposing upon her a public debt which she need not otherwise have incurred. It may we hope not seem even now too late to ask for such refund as equity requires. But some relief would be afforded to India if, in bearing her share in this Imperial burden, she had the help of the Imperial credit. Had the Imperial guarantee been granted at the time the Indian debt was incurred, a vast sum would have been saved to India. But even now this concession would go some way to lighten the load imposed upon India in creating and maintaining British Imperial supremacy in the East.

Q. 18,514.

App. B., para. 129.

99. We are strongly of opinion that India ought no longer to bear the heavy financial strain of 75,000 British troops.‡ At the present time about 10,000 of these troops have

* Protest against Burmese War, Indian National Congress, 1885, Resolution VII.

† Extract resolution at a General Court of the East Indian Company, on the 27th June 1842 (Sir George Wingate's pamphlet "Our Financial Relations," 1859, p. 32).

‡ Protest Resolution V, Indian National Congress, 1885.

been withdrawn from India for employment in the Transvaal war, while 5,000 Native troops have also been withdrawn to replace British soldiers transferred from Ceylon, Mauritius, and Singapore for employment in South Africa. If in a time of war, when the strain is great on the Empire, it is considered safe to withdraw 15,000 troops from India, it is clear that, on a peace footing, the number of British troops may be safely reduced by 20,000 men. We do not recommend their withdrawal from India, where they should continue to be quartered, but equity requires that the revenues of India should be relieved of their entire charges, and that they should be treated as part of the reserve forces of the Eastern portion of the British Empire generally, and borne in future upon the army estimates in that capacity.

100. With regard to the dispute between the War Office and the Government of India, Lord Northbrook's Committee fixed the capitation grant for the training of European recruits at 7*l.* 10*s.*; and Lord Northbrook in his evidence said (Q. 14,295) "that this Commission may assume that on the whole our conclusions on the arith-"metical question are fair to both sides." And in reply to (Q. 14,266) he said, "Yes, we then having got all the returns we wanted, and having got the claims for "1886–7 and 1887–8, arrived at a rate of 7*l.* 10*s.* upon the establishment of the "British troops in India, which we recommended as being what we considered a fair "charge. That was the result of the Commission." The Government of India claims a reduction to 5*l.*; but our colleagues have retained the charge at 7*l.* 10*s.* If this be accepted, then according to the principles above enunciated, this charge for European agency, being one in which both countries are interested, should be borne in equal shares by the two countries, the contribution from India being thus 3*l.* 15*s.* Similarly as regards the Navy. The charge is incurred directly for joint purposes in the Indian waters. It should, therefore, be fairly divided between India and the Imperial Exchequer. And in this connexion it must be pointed out that all the advantages of service in the Royal Navy are reserved for British born subjects. On this account either Indians, according to their qualifications, should be allowed to participate in the honours and emoluments of the service, or else a corresponding reduction should be made in the payment required from India. We regret that (as shown in Appendix H) the Admiralty excludes Indians from service in the Royal Navy.

Qq. 6195–6, 6045–6.

Qq. 6594, 9606–12.

Qq. 7130–4.

101. With reference to minor expenses, such as Aden, diplomatic and consular establishments, subsidies, &c., east of the Red Sea, we are willing to accept the view taken by our colleagues. But we think that in all cases where British colonies and dependencies in Australia and the Far East are also interested, they should be required to pay their share. The self-governing colonies have recently shown a strong desire to identify themselves with Imperial interests, and even to share in the burdens; and we are of opinion that if, under these circumstances, they are unwilling to contribute to the charges now in question, and if the Imperial Government is not prepared to insist upon its claim, it would be unbecoming to make an exception in the case of India, and to exact from her a contribution in disregard of her protest.

Q. 9541.

Qq. 12,026, 12,035, 12,037.

102. Another minor point has reference to the ownership of buildings, such as the India Office and the Royal Engineering College, which have been built in England at India's expense. These are for joint purposes; and it might even be claimed that British subjects are more interested in them than Indian subjects. They are property situated in this country; and we note that the Colonial Office was built entirely at the expense of the British Exchequer. We think, however, that it would be sufficient if the cost were equally divided, and a corresponding refund conceded.

103. The recommendations regarding apportionment above submitted depend, in great measure, upon our reading of the Commission's terms of reference, and as we differ from our colleagues in this matter, we have thought it desirable to record our views regarding this part of the reference somewhat in detail. These will be found in Appendix D.

Q. 13,642.

104. In certain cases doubtful points will arise as to respective interests; and it seems desirable to refer such cases for decision to some fair tribunal. The following suggestions are respectfully submitted for consideration.

105. Upon this question valuable evidence has been taken; and the Commission seems called on to make some definite suggestions regarding it, out of deference to the wish expressed by the Prime Minister not long after the Commission was appointed. The proposal to establish an arbitration tribunal between India and Great Britain, in

order to settle disputes regarding the apportionment of charges between the two countries, was first brought into prominence by Mr. Arthur Balfour in the debate, in 1896, on Suakin, in the House of Commons. He then asked "whether the time has "not arrived when we might with advantage, both to India and to England, constitute "some kind of tribunal of arbitration . . . . for the determination of questions of "this sort, in which the interests of India and Great Britain should be alike and "equally represented." This general suggestion was brought into the sphere of practical politics by Lord Salisbury when, in the House of Lords, he stated that early in the year he was "so impressed in favour of such a course that he laid before his "colleagues a proposal for the appointment of a tribunal, which should be so "impartially composed as to obtain the confidence of the taxpayers of both England "and India." When, however, they came to consider the details, they felt that it would be best to await the report of the Royal Commission on Indian Expenditure. And Lord Salisbury expressed a hope that that Commission "will furnish suggestions "for regulations to which the government of the day may be able to conform without "any fear that the steps which they may think necessary for the defence of the "Empire will be made the subject of discussions which may be injurious to the interests "of that Empire." The idea was also approved by Lord Northbrook, who thought that a promise by Government to constitute such an authority would entirely counteract the ill-feeling raised in India by the unhappy Suakin business; while Lord Lansdowne considered that some machinery might be devised which would enable Her Majesty's Government and the Indian Government so to apply the principles of reciprocity that India would be placed for the future "in an infinitely sounder position with regard to these controversies than she had ever before occupied."

Q. 14,305.

Q. 16,033.

106. The point to consider is how such a tribunal shall be found as, in the words of Lord Salisbury, will "obtain the confidence of the taxpayers of both England and India"? It is in such cases generally better, if possible, to utilise an existing machinery, especially if that machinery is one of proved efficiency and accepted authority, rather than to constitute a new tribunal. And, in our opinion, there is no authority in England which more commands the confidence of the Indian public as regards wisdom and strict impartiality than the Judicial Committee of Her Majesty's Privy Council. Fortunately, the Statute 3 & 4 William IV., c. 41, which defines the functions of the Judicial Committee, not only provides that it shall hear judicial appeals, under section 3, but also under section 4, authorises it to entertain any other matter whatsoever upon a special reference by the Crown. Section 4 runs as follows: "That it shall be lawful for His Majesty to refer to the said Judicial Committee, for "hearing or consideration, any such other matters whatsoever, as His Majesty shall "think fit; and such Committee shall thereupon hear and consider the same." And Lord Justice Knight Bruce, in the case of the Nawab of Surat (Moore's Appeals, Vol. V., p. 499), observed with reference to these very wide powers, that if "it shall "hereafter be the pleasure of Her Majesty to refer the present petition, or any similar "petition to their Lordships, their Lordships will, of course, hear it, and report to "Her Majesty upon it." And, in disposing of the particular case, he pointed out to the petitioners how they might get the benefit of section 4: "The petitioners, "therefore, will take such course as they may be advised, with reference to an "application to the Crown, through the Board of Control or otherwise. By "possibility, in consequence of such application, if made, the matter may come here "again, and their Lordships will readily do their duty in hearing it."

Q. 18,767.

Qq. 15,691, 13,651.

107. As it is desired in this matter to provide a tribunal which will not only be impartial but will command the confidence of both British and Indian taxpayers; as the Judicial Committee of the Privy Council fulfils these conditions; as the Statute provides that the Crown can refer to it any such matters whatsoever as her Majesty shall think fit; and as their lordships are prepared readily to hear such matters on the merits, and to report to her Majesty; there seems no reason why any question in dispute between India and Great Britain should not be so dealt with. One great advantage would be that upon the difficult and delicate questions that would thus come before the Judicial Committee the case for each side could be argued by counsel, and the recommendation which would be laid before both Houses of Parliament would carry with it all the authority of a judicial decision by an absolutely independent tribunal. The issues in dispute would be mainly of a judicial kind, such as in the present case, as to where the interest of India ends and the interest of England begins, but if financial matters of a difficult kind were involved an assessor could easily be

added, specially qualified to deal with such questions. It would also be well that for such arbitrations an Indian judge should be included in the Judicial Committee. This would be a step towards the equal representation of Indian and British interests, as desired by Mr. Arthur Balfour. On receiving the report of the Judicial Committee, it would, of course, be open to both Houses of Parliament to discuss and decide regarding it, but there would lie upon anyone objecting to the recommendation a heavy burden to show that the award should not be accepted; and as the recommendation would not come from either political party, there would be no reason why the debate should assume a party complexion or be in any way injurious to the interests of the Empire.

108. In conclusion, we would draw special attention to the Report of 1874 on Indian Finance by a Select Committee of the House of Commons. That Committee expressed its agreement with the opinion of Lord Salisbury, who said that "the most effectual "way of securing financial justice for India was for the House of Commons to be "constantly watchful on her behalf." The question is, how can this constant watchfulness be ensured? The only way seems to be by obtaining in the House of Commons the presence of representatives of the Indian taxpayers. This opens up a large constitutional question, upon which we are not prepared now to enter. But it is to be observed that French India has her representatives in the Chamber of Deputies; and we are of opinion that one representative from each of the Presidencies of Bengal, Madras, and Bombay, would be found of great practical value in the House of Commons; while such a concession would give profound satisfaction to public opinion in India.

Qq. 8,016–7.
Q. 18,023.

109. We desire to associate ourselves with our colleagues in their cordial acknowledgment of the services of Mr. Colin Campbell, the secretary of the Commission.

W. WEDDERBURN.
DADABHAI NAOROJI.

While I am unable to agree with some of the arguments and conclusions brought forward in the Report and Appendices by Sir William Wedderburn, Bart., M.P., and Mr. Dadabhai Naoroji, I agree with the recommendations, and append my signature thereto.

RETURN to an ADDRESS of the Honourable The HOUSE of COMMONS, dated 20 July 1900, for "COPIES of any CORRESPONDENCE between the SECRETARY OF STATE for INDIA in Council and the TREASURY on the subject of the REPORT of the ROYAL COMMISSION on INDIAN EXPENDITURE."

No. 1.

India Office to Treasury.

F. 3418.

17th July 1900.

I am directed by the Secretary of State for India in Council to draw the attention of the Lords Commissioners of Her Majesty's Treasury to the proposals of the Royal Commission on Indian Expenditure, regarding the apportionment of charge between the Governments of the United Kingdom and of India for purposes in which both are interested.

According to paragraph 364 of the Report of the Commission, the total amount of the annual charges to be transferred from the revenues of India to those of the United Kingdom would be approximately 293,000*l.*; but this includes a sum of 108,000*l.* sterling as one half of the military charges for Aden, which should have been stated as 108,000 tens of rupees, so that a reduction of 36,000*l.* must be made. The total amount of the relief which India would receive, if all the recommendations of the Commission were adopted, would therefore be, not 293,000*l.*, but 257,000*l.* a year.

I am desired to express Lord George Hamilton's confident hope that the Lords Commissioners of the Treasury will accept the unanimous opinion of the Commission, in so far as it is in favour of relieving the revenues of India to that extent. As regards the heads under which the relief should be given, I am directed to make the following suggestions.

It appears to Lord George Hamilton that this opportunity might with advantage be taken to put an end to certain minor payments that are now made by India, and thus to simplify the accounts between the two Governments. At present the Secretary of State in Council pays 7,000*l.* a year on account of the Mission to the Court of Persia, 12,500*l.* a year for Her Majesty's Establishments in China, and 1,787*l.* as contributions towards the expenses of the Jeddah, Momein, and Busreh Consulates, making a total of 21,287*l.* for political charges. He also pays a subsidy of 10,000*l.* a year to the Eastern Telegraph Company on account of the Zanzibar-Mauritius cable.

I am to suggest that for the future all these contributions might be foregone by the Imperial Government.

His Lordship assumes that 130,000*l.* will be allowed as half the cost of the transport of troops to and from India, and will be defrayed by the Imperial Government, in accordance with the proposals of the Commission.

With respect to the Military Charges for Aden, Lord George Hamilton desires me to suggest that the sum to be granted from Imperial revenues might equitably be fixed at 100,000*l.* a year, being slightly in excess of the share which the Commissioners considered that the Imperial Government should bear, but on the other hand somewhat less than the sum (108,000*l.*) by which they apparently intended that India should benefit under this head.

If these suggestions are accepted by the Lords Commissioners, the total amount of relief to be received by India will be 261,287*l.** a year, and Lord George Hamilton is prepared to accept that sum as satisfying the equitable claims of India under existing circumstances in respect of the subjects referred to the Royal Commission.

	£
*Political charges - -	21,287
Telegraph subsidy - -	10,000
Transport, moiety - -	130,000
Share of Aden expenses -	100,000
Total - - -	£261,287

I have, &c.

Treasury to India Office.

No. 12,560.

26th July 1900.

I am directed by the Lords Commissioners of Her Majesty's Treasury to acknowledge the receipt of your letter (F. 3418) of the 17th instant, on the subject of the recommendations of the Royal Commission on the Administration of the Expenditure of India with regard to the financial relations between Her Majesty's Government and the Government of India.

As the proposals of the Secretary of State for India in Council affect not only the Treasury but also the Foreign Office and War Office, it is necessary that my Lords should consult these Departments; and this has been done by their Lordships, who, on receipt of replies, will communicate their decision to you forthwith.

Meantime, it would be convenient to their Lordships to be informed, as soon as possible, whether they are correct in assuming that Lord George Hamilton proposes that the new financial arrangements should come into force on 1st April 1901.

I am, &c.
(Signed) E. W. HAMILTON.

No. 3.

India Office to Treasury.

F. 3730.

2nd August 1900.

In reply to your letter of the 26th of July, No. 12,560, I am directed by the Secretary of State for India in Council to inform you that he concurs in the view that the financial arrangements which may take place as the result of the consideration of the recommendations of the Report of the Royal Commission on Indian Expenditure, shall come into force on the 1st of April 1901, and that the payments during the current year should be settled as in 1899–1900.

I am, &c.

No. 4.

Treasury to India Office.

No. 13,585.

10th August 1900.

I am directed by the Lords Commissioners of Her Majesty's Treasury to acknowledge receipt of your letter of the 2nd instant (F. 3730), stating that the Secretary of State for India in Council concurs in the view that the financial arrangements which may be made as the result of the consideration of the recommendations in the Report of the Royal Commission on Indian Expenditure, should come into force on the 1st April 1901, and that the payments during the current year should be settled as in 1899–1900.

I am, &c.
(Signed) FRANCIS MOWATT.

No. 5.

Treasury to India Office.

14,137.

11th September 1900.

The Lords Commissioners of Her Majesty's Treasury have carefully considered, in communication with the Secretary of State for Foreign Affairs and the Secretary of State for War, your letter of the 17th July 1900, relative to the recommendations of the Royal Commission on Indian Expenditure in favour of the transfer of certain annual charges from the revenues of India to those of the United Kingdom; and I am directed to request that you will submit to the Secretary of State for India in Council the following reply.

After the necessary correction of the figure given by the Royal Commission for half the military charges for Aden, their recommendations are that the following grants be made by the Imperial Government to India:—

	£
In aid of the charge for the India Office - - - -	50,000
Half the military charges for Aden - - - -	72,000
Increased contribution to the charge of the Persian Mission -	5,000
Half the cost of the transport of troops to and from India -	130,000
Total - -	257,000

The modification of these proposals suggested in your letter under reply consists in the substitution, for the direct contribution in aid of the charge for the India Office, and for the 5,000*l.* increase of contribution to the Persian Mission, of the following:—

	£	£
Additional grant in respect of the military charges for Aden (making the total 100,000*l.*) - - -		28,000
The waiver by the Imperial Government of certain minor payments now made annually by India:—		
1. Subsidy to the Eastern Telegraph Company on account of the Zanzibar-Mauritius Cable - -	10,000	
2. Persian Mission - - - - -	7,000	
3. Establishments in China - - -	12,500	
4. Consulates at Jeddah, Momein, and Basra - -	1,787	
		31,287
Total - - -		59,287

This sum, together with 72,000*l.* representing half the military charges for Aden and 130,000*l.* representing half the cost of transport of troops, makes up a total of 261,287*l.*, as compared with the 257,000*l.* recommended by the Royal Commission, beyond which my Lords are not prepared to increase materially the contribution from Imperial Funds.

With reference to the above proposals, the Secretary of State for War informs my Lords that he is prepared to make an annual contribution from Army Funds, towards the cost of the transport of troops and towards the military charges for Aden, of 230,000*l.*, to commence as from 1st April 1901. His Lordship, however, points out that the Royal Commission recommended that the capitation rate, which forms the basis of the contribution paid by India for Home Effective Charges, should be revised in five or six years, and he proposes therefore that the contribution of 230,000*l.* should remain in force for a similar period. My Lords concur in this proposal.

There remains to be considered the suggestion that the Imperial Government should forego the payments now made by India to the extent of 31,287*l.* per annum, as set out above.

My Lords fully share the opinion of the Secretary of State in Council that it is desirable to take the opportunity of putting an end to these payments, so far as circumstances justify, with a view to simplifying to that extent the accounts between the two Governments; and, for their part, they readily agree to give up the Indian contribution of 10,000*l.* per annum towards the subsidy for the Zanzibar-Mauritius cable.

As regards the other payments by India which are now appropriated in aid of the Diplomatic and Consular Vote, the Secretary of State for Foreign affairs has expressed his views in a letter dated the 11th ultimo, of which I am to enclose a copy.

It will be seen that the Marquess of Salisbury is prepared to forego the following sums :—

	£
For establishments in China - - - - -	12,500
For the Persian Mission (the sum recommended by the Royal Commission) - - - - - - -	5,000
	17,500

2,000*l.* per annum would thus continue to be payable by India in respect of the Persian Mission.

The Foreign Office letter points out that 1,787*l.* does not correctly represent the existing contributions for Jeddah, Momein, and Basra Consulates, which should be 2,664*l.* per annum, and suggests that India should continue to pay a lump sum of 6,000*l.* (to include the remaining 2,000*l.* in respect of the Persian Mission, and the present contributions (*a*) for the Consulates at Jeddah, Momein, and Basra, and (*b*) for the Consulates at Kerman and Chiengmai). My Lords concur in this suggestion, which would have the result of making the total concession to India about 500*l.* more than the 257,000*l.* per annum recommended by the Royal Commission.

My Lords trust that the Secretary of State in Council will be able to accept the above proposals as satisfying the equitable claims of India, under existing circumstances, in respect of the subjects referred to the Royal Commission.

I am, &c.
(Signed) E. W. HAMILTON.

Enclosure in No. 5.

Foreign Office to Treasury.

11th August 1900.

The Marquess of Salisbury has given careful consideration to your letter of the 26th ultimo, and to the proposals of the Secretary of State for India with regard to the withdrawal of certain contributions hitherto made from Indian funds towards Her Majesty's Diplomatic and Consular Establishments in China, Persia, and Turkey.

I am directed by his Lordship to state that, in view of the recommendations of the Royal Commission on Indian Expenditure, he is prepared to accept the arrangement as modified by the Lords Commissioners of the Treasury, viz., that the contribution of 12,500*l.* towards the establishments in China should no longer appear as an appropriation-in-aid of the Diplomatic and Consular Vote, and that the 7,000*l.* now furnished by India towards Imperial expenditure in Persia should be reduced by 5,000*l.*

With regard to the payments for the maintenance of Her Majesty's Consulates at Jeddah, Momein, and Basra, I am to observe that the sum of 1,787*l.* does not correctly represent the amounts supplied by India for that purpose. The figures appear to have been taken from the Appropriation Account for 1898-99, which, amongst other things, only included a half-year's contribution in the case of Basra.

The items now stand as follows:—

	£	
For Jeddah - - - - -	790	
„ Momein - - - - - -	474	(maximum)
„ Basra - - - - -	1,400	
	£2,664	

I am also to point out that contributions have hitherto been received from India towards the expenses of two other consulates, viz.:—

	£	
For Kerman - - - - -	400	(maximum)
„ Chiengmai - - - - -	1,000	
	1,400	

Lord Salisbury entirely concurs in Lord George Hamilton's view that it is very desirable to put an end to the minor payments which are now made by India, and thus to simplify the accounts between the two Governments, and he gathers from the expressions contained in your letter that the Lords of the Treasury are of the same opinion.

The periodical revision of these assessments gives rise to some inconvenience, and to much lengthy correspondence. If the Secretary of State is asked to forego so large a sum as 17,500*l.* for the benefit of the Indian Exchequer, there seems to be no sufficient reason for disputing the exact figures at which the half share to be borne by India on account of each individual consulate should from time to time be fixed. Moreover, these special payments are apt to attract attention, and to give rise to adverse comment and criticism, relating as they do to places affected by so many diverse political considerations, and situated so far apart on the Red Sea and the Shatt-el-Arab and in remote provinces of Persia, China, and Siam.

It appears to his Lordship that the desired simplification of accounts can best be effected by merging the smaller payments in one general contribution, which, however much reduced, might still be regarded as a share of the Imperial expenditure in China, Persia, and Siam.

I am therefore to suggest, for their Lordships' consideration, that the Government of India should for the future contribute 6,000*l.* per annum to the Diplomatic and Consular Vote, this sum being arrived at approximately as follows:—

	£	£
Remnant of general contribution for Persia - - - -		2,000
Existing contributions for Jeddah - - -	790	
„ „ „ Mohein - - - -	474	
„ „ „ Basra - - - -	1,400	
		2,664
„ „ „ Kerman - - - -	400	
„ „ Chiengmai - - - -	1,000	
		1,400
		£6,064

The total amount at present paid from Indian revenues is 23,564*l.*, and the saving to India by reducing this sum to 6,000*l.* is 17,564*l.*, as compared with 17,500*l.*, the figure mentioned in your letter.

I am, &c.
(Signed) T. H. SANDERSON.

No. 6.

India Office to Treasu

F. 4728.

11th October 1900.

In acknowledging the receipt of your letter of the 11th of September, No. 14,137, respecting the apportionment of the Indian Home Charges, I am directed to express the concurrence of the Secretary of State in Council in the proposal that the contribution by the Government of India towards the expenses of the Persian Mission and the Minor Consulates shall be fixed at 6,000*l.* a year, or less by about 5,000*l.* than the amount for which they are at present liable.

With this modification of the suggestions made in Sir Arthur Godley's letter, dated the 17th of July, the relief to Indian revenues in the apportionment of the Home Charges will be approximately as follows:—

	£
Transport of troops - - - -	130,000
Aden - - - - - -	100,000
Zanzibar-Mauritius cable - -	10,000
China Establishments - - - -	12,500
Persian Mission, &c. - - - -	5,000
	257,500

This arrangement will take effect on the 1st of April 1901, up to which date the payments by India will remain unaltered.

The contribution of 230,000*l.* a year for the first two entries in the list will be subject to revision, if and when any alteration is made in the capitation rate for the Army Effective Charges.

I am, &c.
(Signed) HORACE WALPOLE.
